# Beating the Odds at Cherry Street Elementary

## Overview

Carol Rine, who had served as Cherry Street’s principal for less than two years, was troubled by her students’ poor reading skills. She felt her students enjoyed learning to read and reading successfully. Still, she admits, “Our reading scores had been in decline for many years, in line with other elementary schools in the area.”

But the Cherry Street teachers refused to give up. If children needed help, they tutored them during planning periods or after school. “Our faculty exemplifies the ‘whatever it takes’ attitude,” says Rine. It was also seeking a long-term solution, analyzing data to pinpoint the learning approaches with the greatest impact on student achievement. Direct Instruction stood out, thanks to its history of success, data-driven design, and continual progress monitoring.

Another local school had used Reading Mastery to make measurable reading gains. So when the Bay City School District offered Cherry Street the chance to implement the program, Rine accepted the offer.
Implementation

In fall 2013, as Reading Mastery implementation began, Cherry Street faced several major challenges. The school had never used a McGraw-Hill Education program as a basal.

Then, there was the issue of timing. Since the district authorized implementation after the school year began, full implementation was delayed until November. Pressed for time, and in need of more professional development support, Cherry Street teachers called on their Reading Mastery consultant. After additional training in progress monitoring, data usage, and regrouping, the teachers began using Reading Mastery with their students.

Reaction

Principal Rine was impressed from the start by Reading Mastery’s rich language component and the progress monitoring approach that accelerated learning. She appreciated the program’s consistency, which enabled her students to feel good about their reading abilities. She also liked the wealth of teacher resources.

Rine has encouraging words for other schools and districts that are implementing Reading Mastery. “Don’t become overwhelmed with the uniqueness of the steps involved,” she advises. “Your own rhythm and pace will develop over time, and Direct Instruction will become natural. The program’s script is laid out for you. Even though it may initially seem too simple for your grade level, it builds slowly to advance students to the place where they need to be.”

It didn’t take long for Rine to start getting feedback about her school’s new reading program. “Parents have been pleased that their students are receiving a reading curriculum on their level,” she says. A new awareness of their children’s reading problems has motivated some parents to help their children more with reading at home. One grade 1 teacher said parents have shared many positive comments with her, both on reading logs and during parent conferences.

Results

Even before implementation was complete, Reading Mastery was making a measurable difference at Cherry Street. Scores were up on the mid-year district benchmark assessments. According to fluency mastery and assessment mastery data, teachers and students alike are showing growth. In the last school year, Cherry Street earned 72 more school grade points, a measure of success under Florida’s State Accountability system. Reading gains for the bottom quartile increased a full 42 points.

Students with academic delays were beginning to succeed. As Rine explains, “The replacement of our core curriculum in November [2013] has broken a cycle of decreasing student achievement data during our second benchmark assessment on Discovery Education Assessments. One particular situation involved a student who was in Tier III of the Multi-Tier System of Supports (MTSS) and was very close to being diagnosed for Exceptional Student Education (ESE) Eligibility. After the implementation of Reading Mastery, the student began responding to the program and has demonstrated an increasingly positive achievement trajectory in all reading and math data being collected. The student is reading!”

“When he begged to stay and keep reading at the guided table, I smiled a bit brighter. He is making progress with behavior as well.”
One grade 2 student — who, in October, was more than a year behind — was reading at grade level in January. The girl showed improvement in both fluency and vocabulary.

A grade 3 teacher reported, “In my reading group, I have 11 students who have been with me since the implementation of the program, around October. These students all began at the second-grade level, Lesson 1. After my data was reviewed, I was given the go-ahead to have my students take the third-grade placement test. All but one of the students placed into third grade. These students showed a full year’s growth in five months.”

Increased reading proficiency is just the beginning. Students have also gained a wealth of subject-area knowledge from the context of their Reading Mastery materials. That’s critical, because CCSS calls for the use of science and social studies expository text. And teachers are reporting fewer discipline problems, especially during student/teacher games, which engage children in competition and reward them for what they know. Before Reading Mastery, one grade 5 teacher was having trouble teaching one of her favorite students. “When he begged to stay and keep reading at the guided table, I smiled a bit brighter. He is making progress with behavior as well,” she said.

The Future

With Reading Mastery in place as its new K–5 core curriculum, Cherry Street Elementary can now address fidelity of instruction and further refine their implementation. Upper-grade teachers are watching the school’s reading comprehension scores, hopeful they’ll result in students with the skills to make inferences and generalizations and draw conclusions from texts.

Reading Mastery is worth the investment, according to Rine. The program changes attitudes. By providing instruction at appropriate reading levels, it has increased students’ confidence. The mastery students achieve will stay with them and help them in all academic subjects throughout their school careers. The program gives them the confidence to become lifelong learners.

Cherry Street Elementary has been transformed by the experience of implementing Reading Mastery. “We have become an inclusive school,” Rine explains. “We believe that every student can learn. It’s our job to find the potential in every student and to develop that potential into a successful academic future.”

“Parents have been pleased that their students are receiving a reading curriculum on their level.”
Reading Mastery is an ideal K–5 core replacement program for Tier II and Tier III/IV at-risk students. Its curriculum—delivered through systematic, explicit instruction—has been proven effective in preparing students for rigorous Common Core Standards. The program’s three strands can be implemented separately or combined to provide a comprehensive curriculum.

• The Reading Strand addresses all five essential components of reading; helps students connect encoding and decoding; and develops comprehension skills that apply to other subject areas.

• The Literature Strand presents a variety of literary forms and text structures that allow students to practice vocabulary, and comprehension strategies both independently and in groups.

• The Language Arts Strand teaches the language skills students need to understand what is written, read, and spoken and prepares them to communicate effectively.
