Reviewing Everyday Mathematics

For over 35 years, Everyday Mathematics has helped teachers transform how they deliver math instruction. Since the first edition, the program has incorporated research-based practices such as problem-based instruction, flexible grouping strategies, math discourse, and productive struggle. These features are woven into core instruction rather than appearing as labels or stand-alone parts of the lesson.

The authors have created a unique tool called “Planning for Rich Mathematical Instruction” to help teachers and reviewers see where these practices appear in lessons and specific activities. See page xx for more information.

Everyday Mathematics remains the only program that dedicates the time and resources required to develop research-based learning trajectories that are carefully designed to spiral both practice and instruction over time, which has been proven to be the most effective way of achieving true, life-long mastery of mathematics skills and concepts.

To help teachers and reviewers see the coherence of the spiral, the authors have created tools such as the spiral tracker which shows how each standard progresses across lessons and units. See page xxx for more information.

The Everyday Mathematics Classroom

A pervasive element of an Everyday Mathematics classroom is collaborative learning. Working collaboratively in classrooms creates an atmosphere for sharing ideas and problem-solving strategies. As students encounter different ways of solving problems from peers, they learn to interpret and evaluate each other’s point of view and engage in discussions that address the strengths and weaknesses of a variety of approaches.

Each lesson activity includes recommendations for one or more grouping options, helping you create a flexible, dynamic learning environment every day.
An Investment in How Your Children Learn

Behind each student success story is a team of teachers and administrators who set high expectations for themselves and their students. *Everyday Mathematics* is designed to help you achieve those expectations with a research-based approach to teaching mathematics.

The *Everyday Mathematics* Difference

Decades of research show that children who use *Everyday Mathematics* develop deeper conceptual understanding and greater depth of knowledge than children using other programs. They develop powerful, life-long habits of mind such as perseverance, creative thinking, and the ability to express and defend their reasoning.
A Commitment to Educational Equity

*Everyday Mathematics* was founded on the principle that every child can and should learn challenging, interesting, and useful mathematics. The program is designed to ensure that each of your children develops positive attitudes about math and powerful habits of mind that will carry them through college, career, and beyond.

Provide Multiple Pathways to Learning

Through *Everyday Mathematics*’ spiraling structure, your children develop mastery by repeatedly experiencing math concepts in varied contexts, with increasing sophistication, over time. By providing multiple opportunities to access math concepts, you can easily adapt your instruction to better meet the unique learning needs of your children.

Create a System for Differentiation in Your Classroom

Turn your classroom into a rich learning environment that provides multiple avenues for each of your children to master content, make sense of ideas, develop skills, and demonstrate what they know. *Everyday Mathematics* helps you do this by providing the tools you need to effectively address the key components of effective differentiation in your classroom: Content, Process, Product, Classroom Organization, and Learning Environment.*

Access High Quality Materials

All children deserve strong learning materials especially in early childhood. You can be confident teaching with *Everyday Mathematics* because your instruction is grounded in a century of research in the learning sciences and has been rigorously field tested and proven effective in classrooms for over thirty years.

Build and Maintain Strong Home-School Connections

Research shows that strengthening the link between home and school is integral to your children’s success. That’s why *Everyday Mathematics* provides a wealth of resources to help you extend what your children learn in your classroom to what they can do at home.

Use Data to Drive Your Instruction

Using the Quick-Entry Evaluation tool in the ConnectED Teacher Center, you can go beyond tracking progress solely through periodic assessments and easily record evaluations of almost every activity your children engage in every day. The data you collect drives a suite of reports that help you tailor your instruction to meet the needs of every child in your classroom.

About *Everyday Mathematics*
Build Mathematical Literacy

Designed for College and Career Readiness, *Everyday Mathematics* builds a solid foundation for success in your mathematics classroom through meaningful practice opportunities, discussion of reasoning and strategies, and engagement in the mathematical practices every day.

Focused Instruction

The instructional design of *Everyday Mathematics* allows you to focus on the critical areas of instruction for each grade.

### Major Clusters

Each unit focuses on Major Clusters that are clearly identified in the Unit Organizer.

**Focus Clusters**

*Everyday Mathematics* identifies the clusters addressed in the Focus part of each lesson to help you understand the content that is being taught in the lesson.
Coherence Within and Across Grades

Spiral Towards Mastery
Carefully crafted, research-based learning progressions provide opportunities for your children to connect skills, concepts, and applications, while developing deep understanding, long-term learning, and transfer of knowledge and skills to new contexts.

The table below describes how standards addressed in the Focus parts of the lessons link to the mathematics that children have done in the past and will do in the future.

<table>
<thead>
<tr>
<th>Coherence</th>
<th>Link to the Past</th>
<th>Link to the Future</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.OA.2</td>
<td>In Unit 1, children played Fishing for 10 to review their recall of addition combinations of 10. In Grade 1, children added and subtracted within 20 and demonstrated fluency for addition and subtraction within 10. In Unit 1, children explored even and odd numbers using concrete and visual models. In Grade 1, children wrote number models to represent pictures of real-world items with paired features.</td>
<td>Through Unit 4, children will practice determining whether a number of objects in a group is odd or even and express an even number as a sum of two equal addends. In Unit 9, children will add and subtract within 100 using strategies and algorithms. In Unit 5, children will be introduced to partial-sums addition and in Unit 9 they will decompose into two equal addends.</td>
</tr>
<tr>
<td>2.OA.3</td>
<td>Understanding that addition can be represented with a number model: Representing Number Stories, p. 158</td>
<td>In Unit 3, children will explore how thinking about addition facts can help them solve subtraction facts. In Grade 3, children will apply their knowledge of basic addition and subtraction facts to solve addition and subtraction problems within 1,000.</td>
</tr>
</tbody>
</table>

Rigorous Content
Everyday Mathematics gives you the tools and resources you need to emphasize conceptual understanding, procedural fluency, and applications with equal intensity.

About Everyday Mathematics
Problem-based Instruction

*Everyday Mathematics* builds problem solving into every lesson. Problem solving is in everything they do.

<table>
<thead>
<tr>
<th>Warm-up Activity</th>
<th>Daily Routines</th>
<th>Math Message</th>
<th>Focus Activities</th>
<th>Summarize</th>

<tr>
<td>Lessons begin with a quick, scaffolded Mental Math and Fluency exercise.</td>
<td>Reinforce and apply concepts and skills with daily activities.</td>
<td>Engage in high cognitive demand problem solving activities that encourage productive struggle</td>
<td>Introduce new content with group problem solving activities and classroom discussion.</td>
<td>Discuss and make connections to the themes of the focus activity.</td>
<td>Lessons end with spiraled review of content from past lessons.</td>
</tr>
</tbody>
</table>

Practice Embedded in Every Lesson

Because *Everyday Mathematics* is a problem-based curriculum, practice opportunities appear naturally in daily instruction, but specific activities in the practice part of lessons help you be confident your children are progressing toward mastery and maintaining and applying knowledge and skills over time.

**Games**

Provide opportunities for fluency practice, along with collaborative learning experiences.

**Math Boxes**

Provide children with an opportunity to recall previously taught skills and concepts. These are distributed practice activities that include a balance of skills, concepts, and applications.

**Home Links**

Allow children to practice school mathematics and help family members connect to school.
Mathematical Literacy
Sets The Stage for Algebra

*Everyday Mathematics* encourages children to recognize, analyze, and generalize patterns; represent quantities and relationships symbolically; model problem situations using objects, pictures, words, and symbols; and understand real-world relationships such as direct proportion—which, along with a fluent mastery of basic arithmetic, are the building blocks of algebraic thinking.

*About Everyday Mathematics*
Be the Teacher They Will Always Remember

An *Everyday Mathematics* classroom has a unique energy that’s a result of student engagement and excitement about learning math. This environment builds growth mindset and other positive attitudes about learning that will help your children succeed long after they've left your classroom.

Math Talk
Talking about mathematics is an essential part of learning mathematics. Opportunities for children to share their problem-solving strategies and their reasoning as well as critique others’ reasoning are embedded throughout *Everyday Mathematics*, making it easy for you to facilitate math discussions every day.

“*I can share my solution!*”

Collaboration
*Everyday Mathematics* was designed to allow your children to share ideas and strategies. They work in small groups and with partners formed according to their needs, helping you create a rich learning environment that supports powerful instruction.
Perseverance and Productive Struggle

*Everyday Mathematics* helps you create a classroom culture that values and supports productive struggle, that fosters productive dispositions in your children—a belief that mathematics is worthwhile, an inclination to use the mathematics they know to solve problems and confidence in their own mathematical abilities.

"I can do this!"

Hands-on Exploration

*Everyday Mathematics* includes hands-on activities in every lesson that often involve the use of manipulatives and games to help children make connections to their everyday life. These activities allow children to model mathematics physically, concretely, and visually—deepening their understanding of concepts and skills.
The Everyday Mathematics Lesson

Lessons are designed to help teachers facilitate instruction and engineered to accommodate flexible grouping models. The three-part, activity-driven lesson structure helps you easily incorporate research-based instructional methods into your daily instruction.

Embedded Rigor and Spiraled Instruction

Each lesson weaves new content with practice of content introduced in earlier lessons. The structure of the lessons ensures that your instruction includes all elements of rigor in equal measure with problem solving at the heart of everything you do.
Key Components

The Everyday Mathematics authors have developed a suite of resources that support your instruction, helping you create a mathematically rich environment every day.

Open Response and Reengagement Lessons

Every unit includes a 2-day lesson that provides your children the opportunity to work with rich tasks and solve complex problems while explicitly engaging in the mathematical practices.

Games

Research shows that games provide a more effective learning experience than tedious drills and worksheets. Games allow for playful, repetitive practice that develops fluency and confidence and helps children learn to strategize.

Activity Cards

Activity Cards provide structured exploration of content tied to the focus of the lesson independently, in partnerships, and in small groups, especially in centers, where children are expected to complete the activity with minimal teacher guidance.

Quick Looks

Quick Look activities are routines that help your children develop the ability to recognize a quantity without counting and to decompose numbers in various ways. As they encounter various combinations of numbers, they also develop strategies for basic facts.
Online Resources

Digital tools to help you confidently deliver effective mathematics instruction in your classroom are included with every implementation. Everything you need is included in one easy-to-navigate place and you can customize your lessons by adding resources and notes—and everything is saved and available to you year after year.

The Teacher Center

You’ll never waste time looking for resources because everything you need for every lesson is right where you need it, when you need it. When you open the Everyday Mathematics Teacher Center, you’re automatically taken to the overview of the current lesson.

Launch Presentation

Editable versions of digital lessons that help you lead instruction.

Plan Your Lesson

Review all of the activities for the lesson.

Resources

Access lesson resources, additional projects and home-school connections.

Games

Open online games for fluency practice.

Quick Entry

Easily record evaluations of your children’s progress.

Today’s Data

Easy access to Data Dashboard reports to drive your daily instruction.

Differentiation

Resources to help you adjust the lesson to support all learners.
The Student Learning Center

Engineered to help each of your children experience confidence and develop positive feelings about math in a digital environment that keeps them engaged and excited about learning.

Lesson Content
Your children’s lessons are synched with your planner so they always have easy access to each day’s activities.

My Reference Book
One-click access to the interactive reference book that includes descriptions and examples as well grade-level-appropriate explanations of mathematical content and practices.

eToolkit
eTools and writing tools that enable your children to show their work and explore dynamic extensions.

Geometer’s Sketchpad Activities and EM Games Online
Easy to access Fact Practice games and full integration of The Geometer’s Sketchpad® activities.

Tutorial Videos
Demonstrations of concepts and skills.

EM at Home
Parents have easy access to resources to help them support their child’s learning.
Data Driven Instruction

*Everyday Mathematics* includes a complete set of tools and resources to help teachers evaluate the development of each child’s mathematical understanding and skills, while providing actionable data to inform instruction.

### Evaluate

**Ongoing Assessments**

**Assessment Check-In** Daily lesson based assessment opportunities.

**Writing and Reasoning Prompts** Allow children to communicate understanding of concepts and skills and strategies for solving problems.

### Periodic Assessments

**Progress Check** lessons at the end of each unit provide formal opportunities to assess children’s progress toward mastery of content and process/practice standards.

- **Unit Assessments** Assess children’s progress toward mastery of concepts, skills, and applications in the current unit.
- **Self Assessments** Allow children to reflect on their understanding of content and process/practice standards that are the focus of the unit.
- **Challenge Problems** Extend important ideas from the unit, allowing children to demonstrate progress beyond expectations.
- **Cumulative Assessments** Assess children’s progress toward mastery of content and process/practice standards from prior units.
- **Open Response Assessments** Provide information about children’s performance on longer, more complex problems and emphasize the process and practice standards for mathematics.

**Benchmark Assessments** Beginning of Year, Mid-Year, and End of Year benchmarks follow the same format as Unit Assessments.
Record
A full suite of tools including rubrics and class checklists are available to help you track your children’s progress.

Quick Entry Evaluation Tool
You can quickly and efficiently record evaluations of your children’s performance as well as add notes.

Report
The Data Dashboard is a responsive reporting tool that delivers actionable information to help you adapt and personalize your instruction and provide feedback to families and administrators.
Differentiation System

*Everyday Mathematics* fosters rich learning environments that provide multiple avenues for mastering content, making sense of ideas, developing skills, and demonstrating knowledge. This allows rigorous mathematics content to be accessible and engaging for all children.

*Everyday Mathematics* Differentiation Model

- **Content**
  Clear goals and features that can be readily adapted or scaffolded to adjust the content for individual children.

- **Process**
  Engaging activities and point-of-use prompts that help foster rich pedagogical interaction in the classroom.

- **Product**
  Multiple opportunities to assess and monitor progress over time and to analyze mathematical strengths and misconceptions.

- **Classroom Organization**
  Opportunities for whole-class and small-group instruction built into every lesson, as well as time for children to work in partners, and individually.

- **Learning Environment**
  *Everyday Mathematics* provides multiple opportunities for children to reflect on their own strengths and weaknesses while engaging in productive collaboration.
Supplementary Activities

*Everyday Mathematics* offers specific differentiation options in every lesson for:

- Children who need more scaffolding
- Children who need extra practice
- Advanced Learners
- Beginning English Language Learners
- Intermediate and Advanced English Language Learners

Lesson Supplements

Almost every lesson has Differentiation Support Pages found in the ConnectED Teacher Center that offer extended suggestions for working with diverse learners, including English Language Learners and children who need more scaffolding.

**Point-of-Use Differentiation**

**Assessment Adjustments** Suggestions for scaffolding and extending Progress Check assessments.

**Game and Activity Adjustments** Recommendations for tools, visual aids, and other instructional strategies that provide immediate support.

**Adjusting the Activity** Suggestions for adapting activities to fit children's needs.

**Common Misconceptions** Notes that suggest how to use observations of children's work to adapt instruction.
Supporting Rich Mathematical Instruction

*Everyday Mathematics* includes a wealth of resources to help you deliver effective instruction every day.

**Planning**

Every Unit Organizer includes a chart that shows where the building-blocks for rich mathematical instruction appear throughout every unit.

**Preparing**

Every Unit Organizer also includes important background information on both content and practice standards to help you confidently deliver instruction.

Support

The Everyday Mathematics Virtual Learning Community (VLC) at The University of Chicago, provides a free space where you can connect with a network of skilled, passionate educators who are also using the program, and interact with the authors. Resources on the VLC include classroom videos of lessons in action and instructional tools and resources.

Resources

Everything you need to successfully implement Everyday Mathematics is at your fingertips through the ConnectED Resource page of your Teacher Center including videos from the authors, quick start guides for key features, and the Implementation Guide, a comprehensive guide to using the program.
Getting Ready to Teach
Second Grade Everyday Mathematics

Welcome to Second Grade Everyday Mathematics. This guide introduces the organization and pedagogy of Everyday Mathematics and provides tips to help you start planning and teaching right away.

Grade 2 has 107 lessons in 9 units. Plan to spend 60-75 minutes every day on math so that you complete 3–4 lessons each week and one unit every 3–5 weeks.

This pacing is designed for flexibility and depth. You will have flexibility so you can extend a lesson if discussion has been rich or if students’ understandings are incomplete. You can add a day for “journal fix-up” or for differentiation—to provide an Enrichment activity to every student, for example—or for games. There will also be time to accommodate outside mandates, district initiatives, and special projects.

This pacing also gives you time to go deep, to create a classroom culture that values and supports productive struggle. You can expect your students to do their own thinking, to solve problems they have not been shown how to solve, to make connections between concepts and procedures, to explain their thinking, and to understand others’ thinking. Creating such a classroom culture takes time, but the pacing of Everyday Mathematics 4 is designed to give you the time you’ll need.

The Teacher’s Lesson Guide is your primary source for information on planning units and teaching lessons. In most lessons, children will complete pages in their Math Journals or digitally in the Student Learning Center. Additional pages that require copies are available as Math Masters. See the Materials section on pages xxvi–xxvii for information on the teacher and student components.

Preparing for the Beginning of School

- Use the list on pages xxvi-xxvii to check that your Classroom Resource Package is complete.
- See page xxix for manipulatives and supplies you will need.
- Set up the Ongoing Daily Routines so you can initiate them on the first day.
- Read the Unit 1 Organizer (pages 44–55) and the first several lessons in Unit 1 to help you plan for the first week of school.
- Read the Everyday Mathematics in Grades 1–6 section of the Implementation Guide for more information on getting started.
- Copy the Unit 1 Family Letters on Math Masters, pages 4–7 to distribute early in the school year.
- Review the Beginning-of-the-Year Assessment on pages 70–74 in the Assessment Handbook and consider when you will administer it.

Go Online to join the Virtual Learning Community (VLC) to learn about Everyday Mathematics classrooms from other teachers and to find tips for setting up your classroom.
Lesson Types

*Second Grade Everyday Mathematics* includes four types of lessons, which share many of the same features.

**Regular Lessons** are the most common lesson type. See the table on the following pages for details about regular lessons.

**Explorations Lessons** occur once per unit and give children three unique opportunities to explore new concepts and tools in an informal small-group setting. Exploration A is often a teacher-led activity and focuses on the main content of the lesson. Activity Cards provide directions for children to complete most Explorations.

**Open Response and Reengagement Lessons** extend over two days and occur in every unit. On Day 1 children solve a challenging problem that involves more than one possible strategy or solution. On Day 2 children reengage in the problem and are asked to defend their reasoning and critique the reasoning of other students.

**Progress Check Lessons** are two-day lessons at the end of every unit. All items on the Progress Check match expectations for progress at that point in the grade and, with the exception of the optional challenge assessment, are fair to grade. On Day 1 children complete a self-assessment, a unit assessment, and an optional challenge assessment covering the content and standards that were the focus of the unit. Day 2 includes one of the following types of assessments:

- **Open Response Assessments** are included in odd-numbered units and allow children to think creatively about a problem. They address both content and process/practice standards and are accompanied by task-specific rubrics.

- **Cumulative Assessments** are included in even-numbered units and cover standards from prior units.
Lesson Parts and Features

Every lesson begins with two planning pages. The remaining pages provide a detailed guide for teaching the three parts of a lesson: Warm Up, Focus, and Practice.

<table>
<thead>
<tr>
<th>Lesson Parts and Features</th>
<th>Description</th>
<th>Tips</th>
</tr>
</thead>
</table>
| **Lesson Opener**         | An outline of the lesson to assist in your planning that includes information on content and standards, timing suggestions, assessment, and materials. | • See Before You Begin for preparation tips.  
• Follow the time allotments for each part of the lesson. |
| **Differentiation Options** | Optional Readiness, Enrichment, Extra Practice, and English Language Learners (ELL) Support activities that allow you to differentiate instruction. Additional Differentiation Support pages are available online for each regular lesson. | • Choose to complete Differentiation Options as a whole class, as a small group, or individually depending on the needs of your children.  
• Note that some children may benefit from completing the Readiness activity prior to the lesson. |

<table>
<thead>
<tr>
<th>Part 1: Warm Up</th>
<th>Description</th>
<th>Tips</th>
</tr>
</thead>
</table>
| **Mental Math and Fluency** | Quick, leveled warm-up exercises children answer orally, with gestures, or on slates or tablets that provide practice towards fluency. | • Select the levels that make sense for your children and customize for your class.  
• Spend 5 or fewer minutes on this feature. |
| **Routines** | Daily activities that reinforce mathematical concepts and help children connect those concepts to their everyday lives. Routines are described on pages 2–3 of the Teacher’s Lesson Guide. | • Establish the six Grade 2 Routines early in the year and let children grow into them at their own pace. Each routine includes suggestions for adding complexity as the year progresses.  
• Go Online to the Implementation Guide for information on differentiation. |

<table>
<thead>
<tr>
<th>Part 2: Focus</th>
<th>Description</th>
<th>Tips</th>
</tr>
</thead>
</table>
| **Math Message and Math Message Follow-Up** | An introductory activity to the day’s lesson that usually requires children to solve a problem they have not been shown how to solve. The follow-up discussion connects to the focus activities of the lesson and gives children opportunities to discuss their strategies. | • Consider where and how you will display the Math Message and how children will record their answers.  
• Maintain high cognitive demand by expecting children to work through the problem without your help before the follow-up discussion begins. |
<table>
<thead>
<tr>
<th>Part 2: Focus, con’t.</th>
<th>Description</th>
<th>Tips</th>
</tr>
</thead>
</table>
| **Focus Activities** | Two to four main instructional activities, including games, in which children explore and engage in new content (skills, concepts, applications). | • Encourage children to discuss and work together to solve problems during focus activities.  
• Remember that many focus skills, concepts, applications, and games will be revisited in later practice.  
• Go Online to the Spiral Tracker to see the complete spiral.  
• Look for Goals for Mathematical Process and Practice Standards icons. Use these to facilitate discussions about the standards. See also the Implementation Guide for information on Process and Practice Standards. |
| **Assessment Check-In** | A daily assessment opportunity to assess the focus standards in the lesson. Assessment Check-Ins provide information on expectations for particular standards at that point in the curriculum. | • Use results to inform instruction. Expectation statements in the Assessment Check-Ins help you decide which children would benefit from differentiation activities.  
• Consider Assessment Check-Ins as “fair to grade” in most cases. Go Online to record children’s progress and to see trajectories toward mastery for all standards. See also the Implementation Guide for assessment information. |

<table>
<thead>
<tr>
<th>Part 3: Practice</th>
<th>Description</th>
<th>Tips</th>
</tr>
</thead>
</table>
| **Practice Activity** | An opportunity to practice previously taught skills and content through a practice page or a game. | • Allow time for practice pages and games because they are critical for children to meet expectations for standards. This is an essential part of the distributed practice in Everyday Mathematics.  
• Plan for all children to play Everyday Mathematics games at least 60 minutes per week. Go Online to the Implementation Guide for tips to ensure that all children have ample game time. See also the Virtual Learning Community (VLC) to observe many Everyday Mathematics games in action. |
| **Math Boxes** | A daily Math Journal page, beginning in Lesson 1-8, that reviews skills and concepts which children have seen prior to that point in the program. Preview Math Boxes anticipate content in the upcoming unit. | • Aim to have children complete Math Boxes with as little teacher support as possible.  
• Complete Math Boxes at any point during the day. |
| **Home Link** | A daily homework page, beginning in Lesson 1-11, that provides practice and informs families about the math from that day’s lesson. | Encourage children to do these activities with someone at home, such as a parent, caregiver, or sibling. |

</table>
Manipulative Kits and eToolkit

The table below lists the materials that are used on a regular basis throughout Second Grade Everyday Mathematics. All of the items below are available from McGraw-Hill Education. They may be purchased as a comprehensive classroom manipulatives kit or by individual items. The manipulative kit comes packaged in durable plastic tubs. Note that some lessons call for additional materials, which you or your children can bring in at the appropriate times. The additional materials are listed in the Unit Organizers and in the lessons in which they are used.

| Cluster | Add and subtract within 20. |  |         |
| 2.OA.2 | Fluently add and subtract within 20 using mental strategies. By end of Grade 2, know from memory all sums of two one-digit numbers. | GMC | Add within 20 fluently. |
|        | Subtract within 20 fluently. | GMC | Subtract within 20 fluently. |
|        | Know all sums of two 1-digit numbers automatically. | GMC | Know all sums of two 1-digit numbers automatically. |

| Cluster | Work with equal groups of objects to gain foundations for multiplication. |  |         |
| 2.OA.3 | Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s, write an equation to express an even number as a sum of two equal addends. | GMC | Determine whether the number of objects in a group is odd or even. |
|        | Express an even number as a sum of two equal addends. | GMC | Express an even number as a sum of two equal addends. |

### Goals for Mathematical Content

The *Everyday Mathematics* authors developed Goals for Mathematical Content (GMC) that break down each content standard to provide detailed information about the learning trajectories required to meet the full standard. See pages EM3–EM5 for a full view of the content standards and the related GMCs.

### Goals for Mathematical Practice

The authors created Goals for Mathematical Practice (GMP) that unpack the practice standards, operationalizing them in ways that are appropriate for elementary students. See pages EM6–EM9 for a full view of the practice standards and the related GMPs.
Track

Everyday Mathematics provides the tools you need to easily monitor your children’s progress toward mastery.

Visible Learning Trajectories

Get a full picture of how each standard develops across a unit—and the entire grade.

Spiral Towards Mastery

The Everyday Mathematics curriculum is built on the spiral, where standards are introduced, developed, and mastered in multiple exposures across the grade. Go to the Teacher Center at my.mheducation.com to use the Spiral Tracker.

Each unit organizer contains a view of the progression of the standards in the unit across recent and upcoming lessons.

Using the online Spiral Tracker you can see how each standard progresses across the grade.

Master

Unit organizers include mastery expectation statements that provide guidance about what you should expect your children to know by the end of the unit and to help you make decisions about differentiation and groupings.

Progress Towards Mastery  By the end of Unit 2, expect children to write an addition number story that matches a picture, write a number model to represent their story, and solve the story.

Full Mastery of 2.OA.1 expected by the end of Unit 8.

The Mastery Expectations charts starting on page xl provide a full picture of how every standard develops across the entire grade.
Correlation to the Standards for Mathematics

*Everyday Mathematics* is a standards-based curriculum engineered to focus on specific mathematical content in every lesson and activity. The chart below shows complete coverage of each mathematics standard in the core program throughout the grade level.

*Bold lesson numbers indicate that content from the standard is taught in the Focus part of the lesson. Lesson numbers not in bold indicate that content from the standard is addressed in the Warm Up or Practice part of the lesson. The second set of lesson numbers, which are in parentheses, indicate that content from the standard is being addressed in Home Links or Math Boxes.

**Everyday Mathematics
Grade 2 Lessons**

### Use place value understanding and properties of operations to add and subtract.

#### 2.NBT.5
Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.

- Routines 1, 3, 5, 6; 1-10, 2-10, 2-11, 2-12, 3-2, 3-3, 3-4, 3-6, 3-8, 3-9, 4-11, 5-3, 5-6, 5-7, 5-8, 5-9, 5-10, 5-11, 6-1, 6-2, 6-3, 6-4, 6-5, 6-6, 6-7, 6-8, 6-9, 7-1, 7-3, 7-4, 7-6, 7-7, 7-8, 7-9, 8-3, 8-4, 8-6, 8-7, 8-9, 8-10, 9-6, 9-7, 9-8, 9-9, 9-11
- (1-9, 1-11, 2-5, 2-7, 3-1, 4-2, 4-4, 4-5, 4-7, 5-12, 6-10, 6-11, 7-2, 7-5, 8-1, 8-2, 8-5, 8-8, 8-11, 8-12, 9-1, 9-2, 9-3, 9-4, 9-5, 9-9, 9-10)

#### 2.NBT.6
Add up to four two-digit numbers using strategies based on place value and properties of operations.

- Routine 6; 6-1, 6-7, 7-2, 7-3, 7-4, 7-5, 7-9, 8-9, 9-2, 9-3, 9-4, 9-9
- (6-11, 7-7, 7-8, 8-1, 8-2, 8-3, 8-4, 8-11)

#### 2.NBT.7
Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method. Understand that in adding or subtracting three digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones; and sometimes it is necessary to compose or decompose tens or hundreds.

- Routine 5; 1-2, 1-12, 2-1, 2-8, 3-7, 3-9, 4-3, 4-7, 5-3, 5-4, 5-6, 5-7, 5-8, 5-9, 5-10, 5-11, 6-1, 6-2, 6-3, 6-4, 6-5, 6-6, 6-7, 6-8, 6-9, 7-1, 7-3, 7-7, 7-9, 8-3, 8-6, 8-7, 8-10, 9-1, 9-6, 9-7, 9-8, 9-11
- (3-6, 3-10, 4-2, 4-4, 4-5, 4-8, 4-12, 5-11, 5-12, 6-1, 6-2, 6-3, 6-4, 6-5, 6-6, 6-8, 6-9, 6-10, 7-1, 7-3, 7-7, 8-1, 8-2, 8-3, 8-4, 8-11)

#### 2.NBT.8
Mentally add 10 or 100 to a given number 100–900, and mentally subtract 10 or 100 from a given number 100–900.

- Routines 1, 2, 5; 1-1, 1-4, 1-5, 1-11, 2-2, 2-4, 4-5, 4-8, 4-11, 5-1, 5-6, 5-7, 5-9, 5-11, 6-3, 7-6, 7-8, 7-9, 9-9
- (2-6, 2-8, 2-11, 3-6, 3-9, 3-10, 3-11, 4-6, 4-10, 4-12, 5-8, 5-12, 6-2, 6-4, 6-5, 6-6, 6-8, 6-9, 6-10, 7-1, 9-1, 9-3)

#### 2.NBT.9
Explain why addition and subtraction strategies work, using place value and the properties of operations.

- 1-5, 1-12, 2-1, 2-4, 2-5, 2-6, 2-7, 3-2, 3-6, 3-7, 5-6, 5-11, 6-6, 6-7, 6-8, 7-1, 7-3, 7-4, 8-9, 9-6, 9-7
- (7-5, 7-8)

### Measurement and Data

#### 2.MD

**Measure and estimate lengths in standard units.**

#### 2.MD.1
Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.

- 4-8, 4-9, 4-10, 4-11, 5-8, 6-10, 7-4, 7-5, 7-6, 7-9, 9-4
- (3-8, 3-12, 5-1, 5-2, 5-3, 5-4, 5-6, 5-10, 6-1, 6-3, 7-8, 8-2, 8-4, 8-5, 8-7, 8-8, 8-12, 9-1, 9-3)

#### 2.MD.2
Measure the length of an object twice, using length units of different lengths for the two measurements; describe how the two measurements relate to the size of the unit chosen.

- 4-8, 4-10, 4-11, 6-4, 7-4, 7-5, 7-6, 7-8, 7-9
- (5-3, 8-5)

#### 2.MD.3
Estimate lengths using units of inches, feet, centimeters, and meters.

- 4-8, 5-8, 7-4, 7-5, 7-6, 7-9

#### 2.MD.4
Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard length unit.

- 6-10, 7-4, 7-5, 7-6, 9-4
## Content Standards for Mathematics for Grade 2

### Relate addition and subtraction to length.

**2.MD.5** Use addition and subtraction within 100 to solve word problems involving lengths that are given in the same units, e.g., by using drawings (such as drawings of rulers) and equations with a symbol for the unknown number to represent the problem.

6-2, 6-3, 6-4, 7-1

(5-12, 6-5, 6-7, 6-8, 6-10, 6-11, 7-7, 7-9, 8-1, 8-3, 9-9, 9-11)

**2.MD.6** Represent whole numbers as lengths from 0 on a number line diagram with equally spaced points corresponding to the numbers 0, 1, 2, . . . , and represent whole-number sums and differences within 100 on a number line diagram.

Routines 1, 3, 4-1, 1-2, 1-7, 2-8, 2-11, 3-9, 3-10, 4-3, 5-7, 6-1, 6-4, 7-7, 7-8, 9-2, 9-4

(1-8, 1-10, 1-13, 2-5, 2-7, 6-3, 6-8, 6-10, 8-6, 8-10)

### Work with time and money.

**2.MD.7** Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m.

Routine 6; 4-1, 4-2, 4-3, 5-5

(3-8, 3-12, 4-5, 4-6, 7-4-10, 5-2, 5-4, 5-6, 5-10, 6-1, 6-3)

**2.MD.8** Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies, using $ and ¢ symbols appropriately. Example: If you have 2 dimes and 3 pennies, how many cents do you have?

Routine 1; 1-3, 1-8, 1-11, 2-1, 2-5, 2-8, 3-10, 3-11, 5-2, 5-3, 5-4, 5-11, 9-8

(1-9, 1-12, 2-2, 2-4, 2-6, 2-7, 2-11, 3-2, 3-4, 3-5, 3-7, 4-2, 4-4, 4-8, 4-12, 5-5, 5-6, 5-7, 5-9, 5-10, 6-1, 6-3, 6-8, 9-10, 9-12)

### Represent and interpret data.

**2.MD.9** Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units.

4-8, 4-9, 7-6, 7-7, 7-8, 7-9, 8-5, 9-6

(8-1, 8-3)

**2.MD.10** Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple put together, take-apart, and compare problems using information presented in a bar graph.

Routines 3, 4, 6-1, 6-4, 7-3, 7-9

(5-8, 5-12, 6-5, 6-7, 6-8, 6-10, 6-11, 7-2, 7-4, 8-9, 8-11, 9-5, 9-7)

### Geometry 2.G

#### Reason with shapes and their attributes.

**2.G.1** Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces. Identify triangles, quadrilaterals, pentagons, hexagons, and cubes.

1-3, 2-8, 5-5, 6-10, 7-9, 8-1, 8-2, 8-3, 8-4, 8-5, 8-11, 9-5

(6-6, 6-9, 7-6, 7-10, 8-6, 8-9, 8-10, 9-1, 9-2, 9-3, 9-4, 9-10, 9-12)

**2.G.2** Partition a rectangle into rows and columns of same-size squares and count to find the total number of them.

1-12, 3-11, 8-6, 8-7, 9-11

(7-6, 7-10, 9-1, 9-3, 9-6, 9-8)

**2.G.3** Partition circles and rectangles into two, three, or four equal shares, describe the shares using the words halves, thirds, half of, a third of, etc., and describe the whole as two halves, three thirds, four fourths. Recognize that equal shares of identical wholes need not have the same shape.

2-8, 8-11, 9-1, 9-2, 9-3, 9-4, 9-10

(8-8, 8-12, 9-5, 9-6, 9-7, 9-8, 9-9, 9-11, 9-12)
Correlation to the Mathematical Processes and Practices

*Everyday Mathematics* is a standards-based curriculum engineered to focus on specific mathematical content, processes, and practices in every lesson and activity. The chart below shows complete coverage of each mathematical process and practice in the core program throughout the grade level.

<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Mathematical Processes and Practices</td>
<td>Everyday Mathematics Goals for Mathematical Processes and Practices</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>---------------------------------------------------------------</td>
</tr>
<tr>
<td>Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.</td>
<td><strong>4. Model with mathematics.</strong></td>
</tr>
<tr>
<td>Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.</td>
<td></td>
</tr>
</tbody>

### Mathematical Processes and Practices

<table>
<thead>
<tr>
<th>5. Use appropriate tools strategically.</th>
<th><strong>Everyday Mathematics Goals for Mathematical Processes and Practices</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.</td>
<td>Pages 11, 12, 14, 15, 31, 32, 34, 35, 59, 72, 105, 130, 151, 153, 154, 155, 163, 197, 199, 261, 264, 267, 305, 307, 309, 311, 335, 339, 343, 345, 346, 381, 383, 384, 393, 396, 399, 447, 451, 455, 459, 460, 465, 481, 507, 508, 509, 510, 512, 542, 543, 553, 571, 572, 575, 582, 583, 584, 585, 587, 588, 589, 593, 631, 637, 638, 639, 640, 641, 643, 646, 647, 650, 651, 652, 653, 670, 727, 735, 753, 800, 802, 803, 848, 849</td>
</tr>
<tr>
<td>6. Attend to precision.</td>
<td></td>
</tr>
<tr>
<td>Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.</td>
<td>Pages 6, 13, 32, 34, 35, 92, 123, 124, 129, 152, 153, 165, 175, 245, 246, 247, 248, 249, 251, 252, 253, 267, 269, 270, 275, 276, 277, 279, 293, 296, 299, 313, 335, 337, 343, 351, 352, 364, 376, 377, 383, 384, 389, 396, 447, 460, 541, 543, 553, 577, 578, 579, 593, 639, 646, 647, 650, 651, 652, 720, 721, 722, 751, 753, 759, 781, 782, 783, 799, 801, 802, 803, 805, 808, 833, 834, 835, 836, 838, 839, 847, 851</td>
</tr>
</tbody>
</table>
Mathematical Processes and Practices

7. Look for and make use of structure.

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5 + 7 \times 3$, in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$, older students can see the $14$ as $2 \times 7$ and the $9$ as $2 + 7$. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see $5 - 3(x - y)^2$ as $5$ minus a positive number times a square and use that to realize that its value cannot be more than $5$ for any real numbers $x$ and $y$.

8. Look for and express regularity in repeated reasoning.

Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing $25$ by $11$ that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through $(1, 2)$ with slope $3$, middle school students might abstract the equation $(y - 2)/(x - 1) = 3$. Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$, $(x - 1)(x^2 + x + 1)$, and $(x - 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process and practice, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

Everyday Mathematics Goals for Mathematical Processes and Practices

Pages 112, 184, 188, 189, 190, 192, 193, 220, 222, 223, 276, 280, 281, 285, 287, 288, 289, 313, 396, 477, 479, 671, 843, 844, 850
Mastery Expectations

In Second Grade, *Everyday Mathematics* focuses on procedures, concepts, and applications in four critical areas:

- Understanding of base-10 notation.
- Building fluency with addition and subtraction.
- Using standard units of measure.
- Describing and analyzing shapes.

<table>

Focus

In Unit 4, children extend their understanding of place value. They also explore standard tools and units for measuring length and time.

Major Clusters

2.NBT.A Understand place value.
2.MD.A Measure and estimate lengths in standard units.

Supporting Clusters

2.MD.C Work with time and money.

Unit 4 | Place Value and Measurement 322

4-1 Clocks and Telling Time ........................................... 334
4-2 Telling Time to the Nearest 5 Minutes ......................... 342
4-3 a.m. and p.m. ...................................................... 348
4-4 Numeration and Place Value .................................... 354
4-5 Using Place Value to Compare Numbers ..................... 360
4-6 Open Response Using Base-10 Blocks to Show a Number 366
4-7 Playing Target ...................................................... 374
4-8 How Big Is a Foot? ................................................. 380
4-9 The Inch ............................................................. 386
4-10 The Centimeter .................................................... 392
4-11 Explorations Matching Facts with Strategies, Measuring a Path, Exploring Arrays ........................................... 398
4-12 Assessment Unit 4 Progress Check ............................. 404

Focus

In Unit 5, children review addition and subtraction problems in the context of money and number stories. They learn strategies for mentally adding and subtracting 10 and 100.

Major Clusters

2.OA.A Represent and solve problems involving addition and subtraction.
2.NBT.B Use place value understanding and properties of operations to add and subtract.

Supporting Clusters

2.MD.C Work with time and money.

Unit 5 | Addition and Subtraction 432

5-11 Open Response Adding Multidigit Numbers ................ 506
5-12 Assessment Unit 5 Progress Check ............................. 514

Contents
**Focus**

In **Unit 6**, children collect and display data on two different types of graphs. They are also introduced to comparison number stories and two-step number stories.

**Major Clusters**

- **2.OA.A** Represent and solve problems involving addition and subtraction.
- **2.NBT.B** Use place value understanding and properties of operations to add and subtract.
- **2.MD.B** Relate addition and subtraction to length.

**Focus**

In **Unit 7**, children further explore addition and subtraction strategies and use them to add three or more numbers. They use units of yards and meters to measure distances. At the end of the unit, children will collect data and display it in a frequency table and a line plot.

**Major Clusters**

- **2.NBT.B** Use place value understanding and properties of operations to add and subtract.
- **2.MD.A** Measure and estimate lengths in standard units.

**Supporting Clusters**

- **2.MD.D** Represent and interpret data.

**Contents**

**Unit 6: Whole Number Operations and Number Stories 520**

- **7-4** Measuring with Yards ................................................................. 636
- **7-5** Measuring with Meters ................................................................. 642
- **7-6** Generating Data: Standing Jumps and Arm Spans .......................... 648
- **7-7** Representing Data: Standing Jumps ............................................. 654
- **7-8** Representing Data: Arm Spans .................................................... 660
- **7-9** Explorations Exploring Shape Attributes, Graphs, and Measurements 666
- **7-10** Assessment Unit 7 Progress Check ............................................. 672
Focus

In Unit 8, children explore 2- and 3-dimensional shapes and their attributes. At the end of the unit, they explore strategies for determining the total number of objects in equal groups and rectangular arrays.

Supporting Clusters

2.0.A.C Work with equal groups of objects to gain foundations for multiplication.

2.G.A Reason with shapes and their attributes.

Focus

In Unit 9, children partition shapes into equal shares and apply these ideas to further explore length measurement. They also learn a new subtraction strategy based on place value and continue working with equal groups.

Major Clusters

2.NBT.A Understand place value.

2.NBT.B Use place value understanding and properties of operations to add and subtract.

Supporting Clusters

2.0.A.C Work with equal groups of objects to gain foundations for multiplication.

2.G.A Reason with shapes and their attributes.

*The standards listed here are addressed in the Focus of each lesson. For all the standards in a lesson, see the Lesson Opener.*
Focus

In this unit, children will focus on addition and subtraction.

Major Clusters

2.OA.B  Add and subtract within 20.
2.NBT.B  Use place value understanding and properties of operations to add and subtract.

Supporting Clusters

2.OA.C  Add and subtract within 20.
2.MD.C  Use place value understanding and properties of operations to add and subtract.

Process and Practice Standards

SMP7  Look for and make use of structure.
SMP8  Look for and express regularity in repeated reasoning.

Coherence

The table below describes how standards addressed in the Focus parts of the lessons link to the mathematics that children have done in the past and will do in the future.

<table>
<thead>
<tr>
<th>Links to the Past</th>
<th>Links to the Future</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.OA.2  In Unit 1, children played Fishing for 10 to review their recall of addition combinations of 10. In Grade 1, children added and subtracted within 20 and demonstrated fluency for addition and subtraction within 10.</td>
<td>2.NBT.5  In Unit 3, children will explore how thinking about addition facts can help them solve subtraction facts. In Grade 3, children will apply their knowledge of basic addition and subtraction facts to solve addition and subtraction problems within 1,000.</td>
</tr>
<tr>
<td>In Unit 3, children will explore how thinking about addition facts can help them solve subtraction facts. In Grade 3, children will apply their knowledge of basic addition and subtraction facts to solve addition and subtraction problems within 1,000.</td>
<td>Throughout Grade 2, children will represent and solve problems involving addition and subtraction within 100. In Unit 6, children will be introduced to partial-sums addition and in Unit 9 they will be introduced to expand-and-trade subtraction. In Grade 3, children will add and subtract within 1,000 using strategies and algorithms.</td>
</tr>
<tr>
<td>2.OA.3  In Unit 1, children explored even and odd numbers using concrete and visual models. In Grade 1, children wrote number models to represent pictures of real-world items with paired features.</td>
<td>2.NBT.7  Throughout Grade 2, children will represent and solve problems involving addition and subtraction within 100. In Unit 6, children will use base-10 blocks to solve problems. In Grade 3, children will use base-10 blocks to solve problems. In Grade 3, children will add and subtract within 1,000 using strategies and algorithms.</td>
</tr>
<tr>
<td>2.NBT.5  In Unit 1, children used addition and subtraction to write equivalent names for numbers. In Grade 1, children used concrete models or drawings and strategies based on place value to add within 100 using a 2-digit number and a 1-digit number, and added a 2-digit number and a multiple of 10. They subtracted multiples of 10 in the range of 10–90 from multiples of 10 in the range of 10–90.</td>
<td>2.NBT.9  Throughout Grade 2, children will make written records of their thinking, which will help them understand and explain why the strategies work. In Grade 3, children will look for arithmetic patterns and explain them using properties of operations.</td>
</tr>
<tr>
<td>In Unit 1, children found four missing numbers on a number grid and explained how the patterns they noticed helped them solve the problem. In Grade 1, children related strategies used to solve addition and subtraction problems to a written method and explained the reasoning used.</td>
<td>Throughout Grade 2, children will make written records of their thinking, which will help them understand and explain why the strategies work. In Grade 3, children will look for arithmetic patterns and explain them using properties of operations.</td>
</tr>
</tbody>

## Virtual Learning Community

### vlc.uchicago.edu

While planning your instruction for this unit, visit the Everyday Mathematics Virtual Learning Community. You can view videos of lessons in this unit, search for instructional resources shared by teachers, and ask questions of Everyday Mathematics authors and other educators.

Some of the resources on the VLC related to this unit include:

- **EM4: Grade 2 Unit 2 Planning Webinar**
  This webinar provides a preview of the lessons and content in this unit. Watch this video with your grade-level colleagues and plan together under the guidance of an Everyday Mathematics author.

- **Subtraction and the Turn-Around Rule: An Open Response and Reengagement Lesson**
  Watch one classroom work through an Open Response and Reengagement lesson. Explore the introduction and reengagement in practice.

- **Discovering Turn-Around Facts with Dominoes**
  Second grade children use dominoes to explore and discuss addition facts.

For more resources, go to the VLC Resources page and search for Grade 2.
The Everyday Mathematics curriculum is built on the spiral, where standards are introduced, developed, and mastered in multiple exposures across the grade. Go to the Teacher Center at my.mheducation.com to use the Spiral Tracker.

Spiral Towards Mastery Progress This Spiral Trace outlines instructional trajectories for key standards in Unit 2. For each standard, it highlights opportunities for Focus instruction, Warm Up and Practice activities, as well as formative and summative assessment. It describes the degree of mastery—as measured against the entire standard—expected at this point in the year.

Operations and Algebraic Thinking

### 2.OA.1

**Progress Towards Mastery** By the end of Unit 2, expect children to write an addition number story that matches a picture, write a number model to represent their story, and solve their story.

**Full Mastery of** 2.OA.1 expected by the end of Unit 8.

### 2.OA.2

**Progress Towards Mastery** By the end of Unit 2, expect children to know doubles and combinations-of-10 addition facts.

**Full Mastery of** 2.OA.2 expected by the end of Unit 9.

### 2.OA.3

**Progress Towards Mastery** By the end of Unit 2, expect children to determine whether a group of objects (up to 20) has an even or odd number of members with the aid of manipulatives.

**Full Mastery of** 2.OA.3 expected by the end of Unit 4.
Progress Towards Mastery: By the end of Unit 2, expect children to understand that the two digits of a 2-digit number represent amounts of tens and ones.

Full Mastery of 2.NBT.1 expected by the end of Unit 7.

Progress Towards Mastery: By the end of Unit 2, expect children to count by 1s past 120 and skip count by 5s and 10s to at least 200.

Full Mastery of 2.NBT.2 expected by the end of Unit 5.

Progress Towards Mastery: By the end of Unit 2, expect children to read and write numbers to at least 120 using base-10 numerals and numbers to 20 using number names.

Full Mastery of 2.NBT.3 expected by the end of Unit 6.

Progress Towards Mastery: By the end of Unit 2, expect children to add within 100 using a number grid, a number line, or counters.

Full Mastery of 2.NBT.5 expected by the end of Unit 9.
Mathematical Background: Content

► **Place Value** (Lesson 2-1)

In the base-10 number system the value of a digit in a given place-value position is 10 times as great as the value of the same digit in the place to its right. For example, the value of 2 in 72 is 2 ones, or 2. But the value of 2 in 25 is 2 tens, or 20 (which is 10 times as much as 2). Similarly, the value of 2 in 231 is 2 hundreds, or 200 (which is 10 times as much as 20). In Grade 1 children began exploring these relationships by bundling objects into groups of 10 and making exchanges, such as trading 1 ten for 10 ones. In Grade 2 children extend their understanding of place value to the hundreds place.

In Lesson 2-1 children count collections of $100, $10, and $1 bills. 2.MD.8 They make exchanges among bills to illustrate that a $10 bill has the same value as ten $1 bills, and a $100 bill has the same value as ten $10 bills. 2.NBT.1a The Exchange Game is introduced as a way to practice counting and making exchanges with money. Later in the year children will apply their understanding of place value to develop and explain strategies for multidigit addition and subtraction. 2.NBT.7, 2.NBT.9

► **Number Stories** (Lesson 2-2)

Number stories involve numbers and one or more explicit or implicit questions. For example: Peter had 5 marbles. Sammie gave him 6 more. How many does he have now? Peter now has 11 marbles. Addition number stories illustrate the different uses of addition in everyday life. Most instances of addition can be categorized as parts-and-total, change-to-more, or comparison situations. Parts-and-total situations involving addition are also known as “putting together” situations. Change-to-more is also known as “adding to.” In Lesson 2-2 children write and solve their own number stories and represent the stories with drawings and number models. 2.OA.1 Children are not expected to categorize number stories at this time. Later lessons will include practice with all types of situations that involve addition.

Number stories also provide contextual practice with facts and multidigit computation. 2.OA.2, 2.NBT.5 Everyday Mathematics uses number stories as a way to expand children’s problem-solving skills. When they solve number stories, children are required to make sense of the situation, decide which operation to use, and then carry out the computation.

Standards and Goals for Mathematical Content

Because the standards within each strand can be broad, Everyday Mathematics has unpacked each standard into Goals for Mathematical Content GMC. For a complete list of Standards and Goals, see page EM1.
Helper Facts (Lessons 2-3 through 2-5)

An important part of fluency with addition facts is the ability to derive an unknown fact from a known fact. Every unknown addition fact can be derived using either doubles facts or combinations of 10. Automaticity with doubles and combinations of 10 is therefore essential before children can become fluent with all of their facts. Children began building fluency with these key groups of facts in Unit 1. In Lesson 2-3 the Quick Looks routine is used to help children solidify their knowledge of these facts. 2.OA.2 Quick Look Cards showing identical dot patterns in each frame of a double ten frame are used to help children think about doubles, and cards that show the dots aligned to suggest combining into a single ten frame are used to help children recognize combinations of 10.

In Lessons 2-4 and 2-5 children use doubles and combinations of 10 as “helper facts” to help them solve other facts. Quick Look Cards showing near-identical patterns of dots on the two frames are used to help children think of facts as near doubles. For example, the first card shown in the margin can help children think of $4 + 5$ as one more than the easier double $4 + 4$. Similarly, Quick Look Cards showing the dots aligned to suggest combining into a single ten frame are used to help children think about making 10 to solve an unknown fact. The second card shown in the margin can help children think of $8 + 3$ as $10 + 1$. Children are encouraged to explain their thinking as they use helper facts to solve unknown facts. 2.NBT.9

The Commutative Property of Addition (Lesson 2-6)

According to the Commutative Property of Addition, for any two numbers $a$ and $b$, $a + b = b + a$. In Second Grade Everyday Mathematics, a more child-friendly name—the turn-around rule for addition—is used with children. In Lesson 2-6 children discover this rule by examining related pairs of addition facts that are shown on double-9 dominoes. They restate the rule in their own words. Children apply their knowledge of this rule in several ways later in the year. They use it to help them develop automatic recall of all the addition facts, using the reasoning that if they already know one fact, they also know its turn-around fact. 2.OA.2 They also apply the rule to larger numbers to help them develop strategies for multidigit addition and explain why the strategies work. 2.NBT.5, 2.NBT.7, 2.NBT.9
**Even and Odd Numbers** *(Lessons 2-8 and 2-9)*

Children explored even and odd numbers in Unit 1. In Lessons 2-8 and 2-9 they build on their understanding of these numbers and connect even numbers to doubles facts. In Lesson 2-8 children sort dominoes according to whether the dominoes show two even numbers, two odd numbers, or one even and one odd number. They record the total number of dots on each domino and note that the sum of two even numbers or two odd numbers is always even. In Lesson 2-9 children connect this idea to doubles facts, noting that a doubles fact always has an even sum. They are introduced to a new game, *Evens and Odds*, in which they write even numbers as the sum of two equal addends and odd numbers as the sum of two equal addends plus or minus 1. **2.OA.3** As children make connections between even numbers and doubles facts and explore how even and odd numbers are related, they build new strategies for solving facts into their repertoire. **2.OA.2**

**Equivalent Names for Numbers** *(Lessons 2-10 and 2-11)*

Children’s work with equivalent names for numbers continues in Unit 2 with name-collection boxes, a program routine introduced in *First Grade Everyday Mathematics*, and the introduction of a new game. In Lesson 2-10 children use name-collection boxes to collect equivalent names for numbers. A *name-collection box* is an open box with a tag at the top identifying the number whose names are collected in the box. In Lesson 2-11 children play *Name That Number* by using number cards to create equivalent names for a target number. Creating and identifying equivalent names for numbers provides practice with basic facts and helps children see numbers flexibly, which provides a foundation for later development of addition and subtraction strategies. **2.OA.2, 2.NBT.5**

**Frames and Arrows** *(Lesson 2-12)*

Lesson 2-12 introduces another program routine: Frames and Arrows. *Frames-and-Arrows diagrams* consist of a sequence of frames connected by arrows. Each frame contains a number; each arrow represents a rule that determines which number goes in the next frame. The numbers in a Frames-and-Arrows diagram form a sequence; the arrow rule(s) represent the mathematical structure that generates the sequence. Children solve several types of Frames-and-Arrows problems. In some cases they use a given rule to fill in empty frames, which provides practice with skip counting and the relationship between addition and subtraction. **2.NBT.2, 2.NBT.5** In other cases they use completed frames to derive the rule (see discussion of Mathematical Process and Practice 8 on page 149). Because Frames-and-Arrows problems come in several types, children must first decide what needs to be done and then perform the operations, which provides valuable practice with problem solving.
Mathematical Background: 
Process and Practice

See below for some of the ways that children engage in SMP7 Look for and make use of structure and SMP8 Look for and express regularity in repeated reasoning through the mathematical content of Operations and Algebraic Thinking and Number and Operations in Base-Ten.

▶ Standard for Mathematical Process and Practice 7

To develop strategies for solving addition facts in Unit 2, children first examine addition facts and "look closely to discern a pattern or structure," as described in Standard for Mathematical Process and Practice 7.

In Lesson 2-3 children look for patterns in a list of facts and sort the facts into two categories: combinations of 10 and doubles facts. In several other lessons in this unit, children use the facts in these categories as "helper facts" to help them solve other facts.

In Lesson 2-6 children note that two facts with the same addends always have the same sum, even when the order of the addends is reversed. They generalize this pattern into a rule (see discussion of Mathematical Process and Practice 8 below) and then discuss how the rule can be used to help them solve facts later.

In Lesson 2-9 children discover that the ones digits of consecutive even numbers and consecutive odd numbers occur in repeating patterns. They use these patterns to help them determine whether numbers are even or odd. These examples illustrate how children "look for structures such as categories, patterns, and properties" and then "use structures to solve problems and answer questions" throughout Unit 2. GMP7.1, GMP7.2

▶ Standard for Mathematical Process and Practice 8

Mathematical Process and Practice 8 states that mathematically proficient students “notice if calculations are repeated, and look both for general methods and for shortcuts.” In Lesson 2-6 children look at pairs of related addition facts and note that two facts with the same addends always have the same sum, regardless of the order of the addends (see discussion of Mathematical Process and Practice 7 above). They make arguments for why this pattern will hold for any two whole numbers and generalize the pattern into the turn-around rule for addition. (Everyday Mathematics uses this child-friendly name until children are ready for the more formal Commutative Property of Addition later on.) They discuss how the general rule can be used to help them solve addition facts.

In Lesson 2-12 children explore the Frames-and-Arrows program routine. In one variation of this routine they examine a sequence of numbers and look for regularity in how the numbers are changing. Children learn to express this regularity as an arrow rule and use the rule to complete and extend the sequence. The Frames-and-Arrows routine provides ongoing practice that allows children to “create and justify rules, shortcuts, and generalizations.” GMP8.1

Standards and Goals for Mathematical Process and Practice

SMP7 Look for and make use of structure.
GMP7.1 Look for mathematical structures such as categories, patterns, and properties.
GMP7.2 Use structures to solve problems and answer questions.

SMP8 Look for and express regularity in repeated reasoning.
GMP8.1 Create and justify rules, shortcuts, and generalizations.

Go Online to the Implementation Guide for more information about the Mathematical Process and Practice Standards.

For children’s information on the Mathematical Process and Practice Standards, see My Reference Book, pages 1–22.
Addition Number Stories

Overview  Children write and solve addition number stories.

Before You Begin
Select and sequence Quick Look Cards 102, 78, and 82 for the Mental Math and Fluency activity. For the Focus portion of the lesson, create a unit box for display.

Vocabulary
addition number story • unit box • label • number model

Warm Up  15–20 min

Unit 2  Fact Strategies

my.mheducation.com
**Differentiation Options**

<table>
<thead>
<tr>
<th>Readiness 5–15 min</th>
<th>Enrichment 5–15 min</th>
<th>Extra Practice 5–15 min</th>
</tr>
</thead>
</table>
| **Putting Groups Together**
2.OA.1, 2.OA.2, SMP2

Put 5–15 min 
Whole Class

- slate, craft stick, 8 counters

For experience using a concrete model to solve number stories, children use counters to model addition number stories on their slates. Show children how to use a craft stick to divide their slates into two sections. Then tell a number story. For example: I have 5 white shells and 3 pink shells. How many shells do I have all together?

Guide children to place 5 counters on one side of the craft stick and 3 counters on the other. They then remove the craft stick and use it to sweep the counters together. They count the total. Ask: How many shells do I have all together? 8 shells

Repeat with different number stories as needed, varying parts-and-total and change-to-more situations. Some children may benefit from modeling with the actual objects from the story, such as shells or marbles.

| Creating Addition Number Stories
2.OA.1, SMP2

Activity Card 21;
Math Masters, p. TA7

- Children further explore addition number stories by creating their own. Stories can be collected and assembled into a class book. Encourage children to write both parts-and-total and change-to-more number stories.

| Writing an Addition Number Story
2.OA.1, 2.OA.2, SMP2

Math Journal 1, p. 19; Math Masters, p. TA7

- For additional practice writing addition number stories, children think of a different addition number story to describe the picture on journal page 19. Tell them to write their new story along with the addition number model on Math Masters, page TA7.

---

**English Language Learner**

**Beginning ELL** To prepare children for writing number stories, have them look at the picture on journal page 19 and respond to the following questions (based on the Visual Teaching Strategies method):

- *What do you think is going on in the picture?*
- *What do you see in the picture that makes you say that?*
- *What else do you see in the picture?*

To provide everyday vocabulary support, label the items in the picture to help beginning English language learners build a bank of words for use in their own number stories.
Standards and Goals for Mathematical Process and Practice

SMP2 Reason abstractly and quantitatively.

GMP2.1 Create mathematical representations using numbers, words, pictures, symbols, gestures, tables, graphs, and concrete objects.

GMP2.2 Make sense of the representations you and others use.

1 Warm Up 15–20 min

Mental Math and Fluency

Flash the following Quick Look Cards in sequence: 102, 78, and 82. Always allow a second look and follow up by asking both what children saw and how they saw it. Asking such questions allows a variety of strategies to emerge.

- Quick Look Card 102 Sample answer: I see 6 in the first one and 6 in the second one, so 6 and 6 makes 12.
- Quick Look Card 78 Sample answer: I thought of 4 and 4, which is 8, but 1 is missing so there are 7.
- Quick Look Card 82 Sample answer: I moved them together into one frame and saw 1 was missing, so there are 9.

Daily Routines

Have children complete daily routines.

2 Focus 20–30 min

Math Message

There are 5 children skating.

There are 8 children playing ball.

How many children are there in all? 13

Representing Number Stories

Math Message Follow Up Have children share with a partner their strategies for solving the Math Message problem. Then have some volunteers share their strategies with the class.

Children might count on their fingers, make tallies for 5 and 8 and count them, count 5 more from 8, or add 5 and 8 using a strategy such as making 10 (for example, $8 + 5 = 8 + 2 + 3$).

Display “5 children + 8 children = 13 children” under the Math Message and point out that this is one way to represent an addition number story.

Introduce the unit box as a tool for establishing a real-world context for numbers. Unit boxes may appear beside individual problems or at the top of a page of problems. Unit boxes contain the labels or units of measure used in the problem(s). Explain that filling in a unit box with a label for the numbers in the story means you won’t have to repeat the label.

Academic Language Development

Discuss the term label. Explain that numbers almost always occur in context—that is, they refer to real-world things—and labels make this context clear. Labels can name a thing (for example, books) or a measurement unit (for example, hours). The word label can be used to tell us to do something, as in “Label your answers.” It can also refer to a tag or an identifier, as in “a label on a can.”

NOTE Display a “unit box for the day” in a prominent place so that children will have a context for the abstract numbers used in the day’s activities, including facts practice. You can select the unit yourself or appoint a child each day to supply the day’s unit. Children might choose topics of current interest or fanciful or silly labels. Throughout the day, individuals can use the “unit for the day” or pick their own.
Using a unit box, the Math Message story can be shown this way:

![Unit Box](children)

\[ 5 + 8 = 13 \]

Emphasize that \( 5 + 8 = 13 \) is called a number model.

**Creating and Solving Addition Number Stories**

**WHOLE CLASS** | **SMALL GROUP** | **PARTNER** | **INDEPENDENT**

Explain to the class that today they will make up and solve number stories. Do the following for several stories:

1. Display the story or draw a picture that illustrates the story but doesn't suggest a solution strategy.
2. Draw an empty unit box below the story.
3. Have children write a label in the unit box and share how they would answer the question in the story.
4. Ask a volunteer to write a number model for the story. **GMP2.1**
5. Ask another volunteer to explain how the numbers in the number model connect to the story. **GMP2.2**

Most of the stories will probably fit in one of these two categories:

**Parts-and-Total**

Two or more separate parts are known. Find the total. For example: Beth has 7 dollars. Joe has 6 dollars. How many dollars do they have in all?

**Change-to-More**

Start with a given number of items. Increase that number. How many are there now? For example: Beth has 7 dollars. Joe gave her 6 dollars. How many dollars does Beth have now?

**NOTE** Everyday Mathematics uses the terms parts-and-total, change, and comparison to describe situations that lead to addition and subtraction problems. Parts-and-total can also be referred to as "putting together," and change-to-more is sometimes called "adding to."

**Writing Number Stories**

*Math Journal 1, p. 19*

**WHOLE CLASS** | **SMALL GROUP** | **PARTNER** | **INDEPENDENT**

Have partners describe to each other what they see in the picture at the top of journal page 19. Then read the directions with the class and have children complete the page.
Children’s stories may include the following:

**Parts-and-Total Stories**

- There are 7 ducks swimming. There are 3 ducks in the grass. How many ducks are there in all? *10 ducks; 7 + 3 = 10*
- There are 6 children sitting. There are 3 children walking. How many children are there in all? *9 children; 6 + 3 = 9*

**Change-to-More Stories**

- There are 7 ducks swimming. Then 3 ducks get in the pond. How many ducks are swimming now? *10 ducks; 7 + 3 = 10*
- There are 6 children sitting. Then 3 more children come and sit down. How many children are sitting now? *9 children; 6 + 3 = 9*

**Assessment Check-In**

Expect most children to succeed at writing an addition number story that matches the picture on journal page 19, writing a number model to represent their number story, and solving the number story. For those who struggle with one or more of these tasks, suggest that they model their stories with manipulatives or tallies as described in the Adjusting the Activity note or have them complete the Extra Practice activity on page 157.

**Summarize** Volunters share their stories and number models and explain the meanings of the numbers in their number models.
Completing Number-Grid Puzzles
Math Journal 1, p. 20

WHOLE CLASS  SMALL GROUP  PARTNER  INDEPENDENT

Have children complete journal page 20. Number-grid puzzles were introduced in Lesson 1-5.

If children are able to complete the first grid but not the second, tell them to ignore the digits in the hundreds place for the numbers in the second grid. Guide children with the following suggestions and questions:

- Ignore the hundreds. Which number comes after 32? Write it in the grid. Children should write 33 in the next space on the grid, leaving a bit of room to the left of the tens place.
- Now remember the hundreds place and write 3 in front of 33.
- The number that comes after 332 is 333.

Differentiate Adjusting the Activity

- Provide additional clues for completing the number-grid puzzles by filling in several of the blue cells.
- Have children use their calculators or a filled-out number grid to find 1 more, 1 less, 10 more, and 10 less.

Math Boxes 2-2
Math Journal 1, p. 21

WHOLE CLASS  SMALL GROUP  PARTNER  INDEPENDENT

Mixed Practice Math Boxes 2-2 are paired with Math Boxes 2-4.

Home Link 2-2
Math Masters, p. 28

Homework Children write an addition number story.
Subtraction and the Turn-Around Rule

Overview  Day 1: Children solve an open response problem by writing number stories and models.  Day 2: Children discuss solutions and revise their work.

Day 1: Open Response

Before You Begin
If possible, schedule time to review children’s work and plan for Day 2 of this lesson with your grade-level team.

Vocabulary
- turn-around rule
- number story

Warm Up  15–20 min  Materials

Mental Math and Fluency
Children solve number stories using addition and subtraction facts.

Daily Routines
Children complete daily routines.

Focus  45–55 min

Math Message
Children write a number model to represent a number story and discuss what makes a story a number story.

Writing Number Stories and Number Models
Children discuss their number models, the turn-around rule for addition, and what makes a story a number story.

Solving the Open Response Problem
Children create a subtraction number story and write a number model to represent it. They use this work to explore whether the turn-around rule works for subtraction.

Getting Ready for Day 2
Review children’s work and plan discussion for reengagement.

Standards
Focus Clusters
- Represent and solve problems involving addition and subtraction.
- Add and subtract within 20.
- Use place value understanding and properties of operations to add and subtract.

Go Online  to see how mastery develops for all standards within the grade.
Standards and Goals for Mathematical Process and Practice

SMP1 Make sense of problems and persevere in solving them.
GMP1.2 Reflect on your thinking as you solve your problem.

SMP4 Model with mathematics.
GMP4.1 Model real-world situations using graphs, drawings, tables, symbols, numbers, diagrams, and other representations.

SMP8 Look for and express regularity in repeated reasoning.
GMP8.1 Create and justify rules, shortcuts, and generalizations.

Math Message
Math Journal 1, p. 31
Turn to journal page 31. Do Problem 1, then talk with your partner.

GMP4.1

Writing Number Stories and Number Models
Math Journal 1, p. 31

Math Message Follow-Up  Ask children to share their number models. Most will have $2 + 8 = 10$ because that is the order of the addends in the story. Look for a child who wrote $8 + 2 = 10$ and focus attention on that solution. Ask: Can we write the number model this way? Yes. Why?  GMP4.1  Sample answer: Because the turn-around rule says both number models have the same sum.

Lesson 2-7  187
To model the **turn-around rule** in an addition **number story**, present a new version of the Math Message with the order of the addends reversed. Say: Jessica has 8 goldfish and 2 dogs. **How many pets does she have in all?** Ask: Does this number story still make sense? **Yes. Why?** Because Jessica still has 8 goldfish and 2 dogs. **Is the total number of pets the same or different?** **The same**

Ask children to share their thoughts on what makes a story a number story. Ask: **How is a number story different from other types of stories?** Sample answers: Number stories include both words and numbers. They often end with a question or something you have to figure out.

Tell children that they are each going to write a number story and use it to think more about the turn-around rule. **GMP8.1**

### Solving the Open Response Problem
*Math Masters*, pp. 38–39

**WHOLE CLASS | SMALL GROUP | PARTNER | INDEPENDENT**

Distribute *Math Masters*, page 38 and read Problem 1 as a class. Point out that children can use the blank space to illustrate their number stories. Tell children to use numbers up to 20 in their number stories, and remind them to include a number model. **GMP4.1**

#### Differentiate

**Adjusting the Activity**

If children have difficulty writing a subtraction number story, explain that a subtraction number story might involve taking away a number of things from some starting amount. Help struggling children develop their own approach by providing several examples of addition and subtraction number stories. Have children who continue to struggle name something they can share. Recommend the sentence frames as described in the English Language Learners note to help them write their number stories.

After most children have finished their number stories, number models, and pictures, distribute *Math Masters*, page 39. Partners should share ideas about this task, but each child should complete a solution. Read Problem 2 as a class. Tell partners to think about the turn-around rule using the subtraction fact from their number model in Problem 1. Prompt partners to discuss how the turn-around rule would affect their subtraction number stories. **GMP1.2** Remind children how the turn-around rule was applied to the addition number story in the Math Message.
For children who have trouble getting started with Problem 2, ask whether the number story would still make sense if they switched the order of the numbers. Expect some children to know that the turn-around rule does not work for subtraction—but to have difficulty explaining why.

Some children may know how to do subtraction on a number line or number grid and see that the turn-around fact gives a negative result, for example, $3 - 5 = -2$. Other children may assume (incorrectly) that the turn-around fact results in $0$ and report that $3 - 5 = 0$. However, what is most important for children to recognize is that with a subtraction fact, the answer is not the same as the original fact when switching the order of the two numbers in the problem. Encourage children to make a new illustration showing how the turn-around rule does not work when applied to their subtraction number story.

**NOTE** If a child writes a story in which the result is $0$, such as $5 - 5 = 0$, then switching the order of the $5$s will not change the result. Discussing this example could be an interesting conversation.

Collect children’s work so that you can evaluate it and prepare for Day 2.

**Getting Ready for Day 2**

**Math Masters**, p. TA5

**Planning a Follow-Up Discussion**

Review children’s work. Use the Reengagement Planning Form (*Math Masters*, page TA5) and the rubric on page 191 to plan ways to help children meet expectations for both the content and process/practice standards. Look for common misconceptions as well as drawings or explanations that clearly illustrate that the turn-around rule does not work for subtraction.

**Common Misconception**

**Differentiate** For a number model such as $9 - 2 = 7$, some children apply the turn-around rule by writing $9 - 7 = 2$. This is an effort to switch the order of the numbers in a way that makes sense and creates a true equation, but it misapplies the turn-around rule. Direct children back to the Math Message and point out how the turn-around rule works for addition facts. When addends are reversed, the sum remains the same. Return their attention to the subtraction example, noting that the two numbers in the problem (the minuend and subtrahend) should be switched to check whether the turn-around rule works.
Organize the discussion in one of the ways below or in another way you choose. If children’s work is unclear or if you prefer to show work anonymously, rewrite the work for display.

Go Online for sample children’s work that you can use in your discussion.

1. Show a response that includes an explanation focused on the number model. Child A switches the appropriate numbers in the model and knows the result is a number that is smaller than 2. This is evidence that the child understands why the turn-around rule does not work for subtraction. GMP8.1 Ask:
   - Is this a subtraction number story? Yes. How do you know? Sample answer: There are words and numbers; it talks about taking something away; there is something to figure out.
   - Does the number model match the number story? GMP4.1 Yes. How? Sample answer: She started with 6 cookies, then she ate 4, and 2 are left.
   - Why do you think this child wrote 4 - 6 in Problem 2? GMP1.2 Sample answer: The child was trying the turn-around rule with 6 - 4.
   - Do you agree with this child’s answer to Problem 2? Why? GMP8.1 Answers vary.

2. Show a response that includes an explanation focused on the effects of reversing the numbers in the number story. Child B switches the appropriate numbers in the story and shows understanding that changing the order produces a different and nonsensical result. As you display this type of response, ask:
   - What do you think this child is trying to tell us in Problem 2? Do you think this child believes the turn-around rule works for subtraction? GMP1.2, GMP8.1 Sample answer: This child is saying the turn-around rule doesn’t work for subtraction. When the child switched the numbers 10 and 6 in the number story, it didn’t make sense because you can’t knock down 10 pins when there are only 6 to start with.
   - How can this child complete the response to Problem 1? Sample answer: Draw a picture.

Planning for Revisions

Have copies of Math Masters, pages 38–39 or extra paper available for children to use in revisions. You might want to ask students to use colored pencils so you can see what they revised.
# Subtraction and the Turn-Around Rule

## Overview
Day 2: Children discuss solutions and revise their work.

## Day 2: Reengagement

**Before You Begin**
Have extra copies available of Math Masters, pages 38–39 for children to revise their work.

**Focus**

**2b** 50–55 min

### Setting Expectations
Children revisit guidelines for a cooperative learning environment and discuss what needs to be included in a full response.

### Reengaging in the Problem
Children view examples of others’ subtraction number stories and discuss how number stories and number models helped them decide whether the turn-around rule applies to subtraction.

### Revising Work
Children improve the clarity and completeness of their number stories and explanations.

### Assessment Check-In
See page 193 and the rubric below.
Expect most children to be able to use subtraction to solve a one-step word problem.

## Standards

### Focus Clusters
- Represent and solve problems involving addition and subtraction.
- Add and subtract within 20.
- Use place value understanding and properties of operations to add and subtract.

## Materials

- Guidelines for Discussions Poster
- selected samples of children’s work
- Math Masters, pp. 38–39 (optional);
  - children’s work from Day 1;
  - colored pencils (optional)

## Practice

**3** 10–15 min

### Math Boxes 2-7
Children practice and maintain skills.

### Home Link 2-7
**Homework** Children write number models for a number story and use the turn-around rule to write number sentences.

**Go Online** to see how mastery develops for all standards within the grade.

my.mheducation.com

## Goals for Mathematical Practice

- **GMP8.1** Create and justify rules, shortcuts, and generalizations.

## Expected Outcomes

<table>
<thead>
<tr>
<th>Goal for Mathematical Practice</th>
<th>Not Meeting Expectations</th>
<th>Partially Meeting Expectations</th>
<th>Meeting Expectations</th>
<th>Exceeding Expectations</th>
</tr>
</thead>
<tbody>
<tr>
<td>GMP8.1</td>
<td>Shows no evidence of making a decision or reasoning about whether the turn-around rule is valid for subtraction.</td>
<td>Indicates that the turn-around rule does not work for subtraction but provides no justification. OR Describes how applying the turn-around rule results in a different answer, is impossible, or does not make sense for the number model or number story.</td>
<td>Justifies a decision that the turn-around rule does not work for subtraction by describing how it results in a different answer, is impossible, or does not make sense when applied to the number model or number story.</td>
<td>Meets expectations and describes the results of the turn-around fact in both the number model and number story.</td>
</tr>

## Lesson 2-7
191
Revisiting Guidelines for Reengagement

To promote a cooperative environment, consider revisiting the class guidelines for discussion that you developed in Unit 1. Review the guidelines and have children reflect on how well they are following them. Solicit additional guidelines from the class. Your revised list might look like the one in the margin.

Model or have children role-play situations based on one or more of the class guidelines. Add sentence frames to the ones you introduced in Unit 1 and encourage children to use them when discussing other children's work:

- I noticed ________.
- I don't understand ________.
- I like how you ________.
- I wonder why ________.
- Could you explain ________? I think this could be improved if ________.

Reviewing the Problem

Review the open response problem from Day 1. Ask: What do you think a full answer to this problem needs to include? Sample answer: a number story, a drawing, a number model, and an explanation about the turn-around rule and subtraction.

Tell children that they are going to look at other children's work and think about those explanations.

Reengaging in the Problem

Children reengage in the problem by analyzing and critiquing other children's work in pairs and in a whole-group discussion. Have children discuss in partners before sharing with the whole group.

Guide this discussion based on the decisions you made in Getting Ready for Day 2.

Revising Work

Pass back children's work from Day 1. Before children revise anything, ask them to examine their number story, drawing, number model, and explanation and decide how to improve them. Ask the questions below one at a time. Have partners discuss their responses and give a thumbs-up or thumbs-down based on their own work.

- Did you write a subtraction number story? Did you include a drawing? [GMP1.2]
- Does your number model match your number story? [GMP4.1]
- Did you decide whether the turn-around rule works for subtraction? Does your explanation connect to your number story or number model?  

Tell children they will now revise their work. Help them see that the explanations shown in the reengagement discussion are not the only correct ones. Tell children to add to their earlier work using colored pencils or to use another sheet of paper, instead of erasing their original work.

**Summarize** Have children reflect on their work. Ask: What did you do to improve your work?  

---

**Assessment Check-In**  
Collect and review children’s revised work. Expect children to improve their number stories, drawings, number models, and explanations based on the class discussion. For the content standard, expect most children to show in Problem 1 that they can use subtraction to solve a one-step word problem. You can use the rubric on page 191 to evaluate children’s revised work for .

**Evaluation Quick Entry** Go online to record children’s progress and to see trajectories toward mastery for these standards.

---

**Sample Children’s Work—Evaluated**  
See the sample in the margin. This work meets expectations for the content standard because the child created a subtraction number story and wrote a correct related number model. With revision, the work for Problem 2 meets expectations for the mathematical process and practice standard because the child gives a justification of the claim that the turn-around rule does not work for subtraction and an explanation of why it does not make sense.

---

**Practice**  
10–15 min

- **Math Boxes 2-7**

</tbody>
</table>

### Focus 30–40 min

#### Math Message

Children count up.

#### Sharing Strategies for Counts

Children share their strategies for counting.

#### Exploration A: Using Tools to Add

Children find sums using number lines and number grids.

- **Activity Card 26; Math Journal 1, p. 33; 3 copies of Math Masters, p. TA2**
- **2.NBT.7, 2.MD.6, SMP2, SMP5**

#### Exploration B: Sorting Dominoes

Children sort dominoes based on whether the dots on the two sides are both even, both odd, or one even and one odd.

- **Activity Card 27; Math Masters, pp. 42–43; 2 copies of Math Masters, p. 44; per partnership: 1 set of double-9 dominoes**
- **2.OA.2, 2.OA.3, SMP7**

#### Exploration C: Making Geoboard Shapes

Children make shapes, designs, or pictures on geoboards and record them on geoboard dot paper.

- **Activity Card 28; Math Journal 1, p. 34; Math Masters, pp. TA9–TA10 (optional); geoboard; rubber bands**
- **2.G.1, 2.G.3**

### Practice 10–15 min

#### Playing The Exchange Game

Children play *The Exchange Game* with $1, $10, and $100 bills.

- **My Reference Book, pp. 146–148; Math Masters, p. G14; toolkit bills; per partnership: 1 die**
- **2.NBT.1a, 2.NBT.3, 2.MD.8, SMP5**

#### Math Boxes 2-8

Children practice and maintain skills.

- **Math Journal 1, p. 35**
- **See page 199.**

#### Home Link 2-8

**Homework** Children count up using a number line and a number grid.

- **Math Masters, p. 45**
- **2.NBT.7, 2.MD.6**

### Vocabulary

- divide
- half
- halves
- fourths

### Standards

**Focus Clusters**

- Work with equal groups of objects to gain foundations for multiplication.
- Use place value understanding and properties of operations to add and subtract.
- Reason with shapes and their attributes.
Differentiation Options

**Readiness** 5–15 min

<table>

<tr>
<td>2.OA.3, SMP7</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Math Masters,** p. 41; 10 counters; per group: 1 each of number cards 1–10

For experience using a concrete model to find whether numbers are even or odd, children pair counters on a ten frame. Place number cards facedown in a pile. Tell children to each pick a card and place that number of counters on the ten frame on **Math Masters,** page 41. Guide them to place counters in pairs whenever possible. On the same page children then record whether the number is odd or even.

Ask: What do you notice about the counters for the even numbers? **GMP7.1** Sample answer: All the counters can be put into pairs. What do you notice about the counters for the odd numbers? **GMP7.1** Sample answer: After making pairs, there is one counter left over. Have children repeat the steps for other number cards.

**Enrichment** 5–15 min

<td></td>
</tr>
<tr>
<td>2.G.1, 2.G.3</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Math Masters,** p. TA9 or TA10

To extend their work making and comparing shapes on a geoboard, have each child create a 4-sided shape that can be divided into 4 equal parts. Then have them show three different ways to divide their shape into 4 equal parts and record their work on **Math Masters,** page TA9 or TA10.

Looking for Doubles

2.OA.2, 2.OA.3, SMP7

**Activity Card 29; completed Math Masters,** pp. 42–44 from Exploration B; paper

For additional practice identifying doubles with domino dots, children use their domino sorts from Exploration B and write number models for the doubles facts. Children explain what they notice about the addends and the sums.

**Extra Practice** 5–15 min

<table>
<thead>
<tr>
<th>WHOLE CLASS</th>

</tr>
</tbody>
</table>

**English Language Learner**

**Beginning ELL** Help children connect the words in a number story to the symbols in a number model. Use teacher think-alouds and demonstrations with objects to role-play a number story once through. Then recount the same number story, representing it with a number model. Read other number stories and ask children to select the correct corresponding number model from a list of examples.

**Differentiation Support** pages are found in the online Teacher’s Center.
Standards and Goals for Mathematical Process and Practice

SMP2 Reason abstractly and quantitatively.
- GMP2.1 Create mathematical representations using numbers, words, pictures, symbols, gestures, tables, graphs, and concrete objects.
- GMP2.3 Make connections between representations.

SMP5 Use appropriate tools strategically.
- GMP5.2 Use tools effectively and make sense of your results.

SMP7 Look for and make use of structure.
- GMP7.1 Look for mathematical structures such as categories, patterns, and properties.

Warm Up 15–20 min

Mental Math and Fluency
- Pose number stories for children to solve. Have children share their strategies. Leveled exercises:
  - Oliva’s soccer team has 6 soccer balls. Carson’s soccer team has 7 soccer balls. How many soccer balls do the two teams have all together? 13 soccer balls
  - Ruth has 11 books in her library bag. Five of the books are for her brother Jason. How many books are not for Jason? 6 books
  - Meredith is 17 years old. She is 8 years older than her sister Maddie. How old is Maddie? 9 years old

Daily Routines
- Have children complete daily routines.

Focus 30–40 min

Math Message
- Start at 0 and count up to 46. You may count by any combination of 1s, 5s, and 10s or any other way you want. Be prepared to share your strategy.

Sharing Strategies for Counts

Math Message Follow-Up Use a pointer with the Class Number Line to help children demonstrate their counts. Look for the following strategies:
- Count by 10s to 40 and then by 1s: 10, 20, 30, 40, 41, 42, 43, 44, 45, 46. Model four jumps of 10 and six jumps of 1.
- Count by 20s to 40 and then make 1 count of 6: 20, 40, 46. Model two jumps of 20 and one jump of 6.

Explain that children will explore how to use number grids and number lines to show counting and addition strategies.
**Exploration A: Using Tools to Add**

*Activity Card 26, Math Journal 1, p. 33; Math Masters, p. TA2*

<table>
<thead>
<tr>
<th>Whole Class</th>
<th>Small Group</th>
<th>Partner</th>
<th>Independent</th>
</tr>
</thead>
</table>

Partners follow the instructions on journal page 33 to represent sums on number grids and number lines and record their work.

GMP2.1, GMP2.3, GMP5.2

---

**Using Tools to Add**

*What You Need*
- 4 x 4 grid
- Number lines
- 10 cubes

*What To Do*
1. Find the sums on page 33, write them on the number grid, and record them.
2. Use the number line and draw your sums.
3. Then use a number grid and draw arrows to show your sums.

Talk About It:
- Compare the two different ways you solved the problems.
- How are they similar? How are they different?

**Try This**

1. Show 6 + 10 on the number line below.
   - Answer: 16
2. Show 39 + 10 on the number line below.
   - Answer: 49
3. Show 39 + 10 on the number grid. Draw arrows to show your sums.

---

**Exploration B: Sorting Dominoes**

*Activity Card 27, Math Masters, pp. 42–44*

<table>
<thead>
<tr>
<th>Whole Class</th>
<th>Small Group</th>
<th>Small Group</th>
<th>Partner</th>
<th>Partner</th>
<th>Independent</th>
</tr>
</thead>
</table>

Children work in partnerships to sort dominoes into groups:
- Those with two even-numbered groups of dots, those with two odd-numbered groups of dots, and those with one even- and one odd-numbered group.

**GMP7.1** Encourage children to use the terms *odd* and *even* as they sort. Children should find 15 dominoes that show two even numbers, 15 dominoes that show two odd numbers, and 25 dominoes that show one even number and one odd number.

---

**Differentiate Adjusting the Assessment**

Some children might benefit from a guide for each of the three sorts. Display an enlarged copy of each of the example dominoes from *Math Masters*, pages 42–44 for children to reference when sorting.
Exploration C: Making Geoboard Shapes
Activity Card 28; Math Journal 1, p. 34

WHOLE CLASS | SMALL GROUP | PARTNER | INDEPENDENT

Children make shapes, designs, or pictures with rubber bands on their geoboards and record them on geoboard dot paper on journal page 34. If children need additional dot paper, distribute copies of Math Masters, page TA9 or TA10.

Children work independently and as partners to make several geoboard shapes with three and four sides. You may wish to demonstrate this activity and model the vocabulary *divide*, *half*, *halves*, and *fourths*.

**Academic Language Development** Children may not be familiar with the plural form of the word *half* and may not be aware when they hear the term *halves* that it refers to more than one half. Model the word *half* by showing both the singular and plural forms of the word in writing and with numbers (for example, 1 half and 2 halves). Refer to other words that may be more familiar to children, such as *knife* and *knives* and *calf* and *calves*. This helps them generalize that the plural form of some words ending in *f* is formed with *-ves* and to use the term *halves* more readily.

**Summarize** Children share and discuss the mathematics they engaged in for each exploration.
Partners play the game as introduced in Lesson 2-1. See My Reference Book, pages 146–148 for directions.

Observe
- Which children are making appropriate exchanges? GMP5.2
- Which children need additional support to understand and play the game?

Discuss
- How did you and your partner or group work together?
- What mathematics did you use in this game?

Math Boxes 2-8
Math Journal 1, p. 35

Mixed Practice Math Boxes 2-8 are paired with Math Boxes 2-6 and 2-11.

Home Link 2-8
Math Masters, p. 45

Homework Children count up using a number line and a number grid.
### Day 1: Unit Assessment

#### Warm Up

**Self Assessment**
- Children complete the Self Assessment.

**Materials**
- *Assessment Handbook*, p. 11

#### Assess

**Unit 2 Assessment**
- These items reflect mastery expectations to this point.

**Unit 2 Challenge (Optional)**
- Children may demonstrate progress beyond expectations.

**Goals for Mathematical Practice (GMP)**

| SMP2      | Create mathematical representations using numbers, words, pictures, symbols, gestures, tables, graphs, and concrete objects. | 2-1, 2-2, 2-8 to 2-11 | 2               |                  |                  |
|           | Make sense of the representations you and others use. | 2-2, 2-4, 2-5 to 2-9 | 2               |                  |                  |
| SMP3      | Make sense of others’ mathematical thinking. | 2-3 to 2-5 | 2               | 1                 |                  |

**Quick Entry Evaluation**
- Record results and track progress toward mastery.

---

Go Online to see how mastery develops for all standards within the grade.
1 Warm Up  5–10 min

Self Assessment
Assessment Handbook, p. 11

Children complete the Self Assessment to reflect on their progress in Unit 2.

Unit 2 Assessment
Assessment Handbook, pp. 12–13

Children complete the Unit 2 Assessment to demonstrate their progress on the standards covered in this unit.

Generic rubrics in the Assessment Handbook appendix can be used to evaluate children’s progress on the Mathematical Process and Practice Standards.
Advice for Differentiation

Because this is the beginning of the school year, all of the content included on the Unit 2 Assessment was recently introduced and will be revisited in subsequent units.

Go Online:

Quick Entry Evaluation  Record children’s progress and to see trajectories toward mastery for these standards.

Data  Review your children’s progress reports. Differentiation materials are available online to help you address children’s needs.

NOTE  See the Unit Organizer on pages 144–145 or the online Spiral Tracker for details on Unit 2 focus topics and the spiral.

Unit 2 Challenge (Optional)

Children can complete the Unit 2 Challenge after they complete the Unit 2 Assessment.
Unit 2 Progress Check

Overview

Day 2: Administer the Cumulative Assessment.

Day 2: Cumulative Assessment

Assess 30–45 min

Cumulative Assessment
These items reflect mastery expectations to this point.

Standards | Goals for Mathematical Content (GMC) | Cumulative Assessment
---|---|---
2.OA.2 | Add within 20 fluently. | 4, 5
Know all sums of two 1-digit numbers automatically. | 4, 5
2.NBT.2 | Count by 1s. | 1
Count by 5s, 10s, and 100s. | 2, 3
2.MD.8 | Solve problems involving coins and bills. | 6
Read and write monetary amounts. | 6

Look Ahead 10–15 min

Math Boxes 2-13
Children preview skills and concepts for Unit 3.

Home Link 2-13
Children take home the Family Letter that introduces Unit 3.

Go Online to see how mastery develops for all standards within the grade.
Adjusting the Assessment

Math Boxes 2–13: Preview for Unit 3
Math Journal 1, pp. 44

Mixed Practice Math Boxes 2-13 are paired with Math Boxes 2-9. These problems focus on skills and understandings that are prerequisite for Unit 3. You may want to use information from these Math Boxes to plan instruction and grouping in Unit 3.

Home Link 2–13: Unit 3 Family Letter
Math Masters, pp. 57–60

Home Connection The Unit 3 Family Letter provides information and activities related to Unit 3 content.
GRADE 2

- Fully digital options that adapt to your classroom
- Gives each student the opportunity to achieve
- Connects math to the world outside the classroom
