Things to Know About Helping Students Become Good Writers

Most students today face higher standards in writing. Expectations include writing coherently on a specific topic, expressing opinions logically, persuading others, and backing up ideas with evidence. These requirements are directly related to the skills necessary to succeed through K-12, in post-secondary education, and in the workplace. Here are five things to know about helping students become good writers.

1. **The Ability to Write Well is Directly Related to the Ability to Read Well.**
   It’s been repeatedly shown that good readers tend to be better writers. Children who read regularly tend to increase their working vocabularies, figure out new words more easily, and improve spelling, all while gaining the experience of how ideas go together to make a good story or argument. Students who do not improve their reading ability over time also tend not to improve their writing skills.

2. **Children Need Regular Opportunities to Express Themselves.**
   Beginning writers need opportunities to share their ideas without feeling too confined by proper handwriting or correct spelling. Regular opportunities to write down thoughts and ideas signal to a child that writing is a way to communicate with others in his or her own words – not just a way to practice spelling or handwriting.

3. **Good Writing is Linked to Critical Thinking.**
   It’s not enough to integrate the teaching of writing and reading. Good writers learn from teachers and others who challenge them to think and learn through purposeful writing, reading, and discussion. Students exposed to writers who engage them to think deeply also build the analytical skills necessary for problem-solving in other subjects.

4. **Exposure to Many Kinds of Writing Helps Children Become Good Readers and Writers.**
   No one teaching approach works for all children. Students tend to do better when they read and write about topics that are important to them. Interaction with many different kinds of writing, as well as experiences, helps students better understand the world around them. Allowing children to choose what they read and write about can instill in them a love of reading and a proficiency in writing that last a lifetime.

5. **Curriculum Plays an Important Role in Developing Good Writers.**
   While good teachers and involved parents are the most important keys to shaping good writers, an integrated curriculum that includes differentiated literacy instruction, alignment with the Common Core, intensive intervention for struggling students, and help for English Language Learners can help more students become proficient. Other important curricular factors include age-specific lesson plans and professional development for English Language Arts teachers.
