Corrective Reading

**Program description**

Corrective Reading is designed to promote reading accuracy (decoding), fluency, and comprehension skills of students in third grade or higher who are reading below their grade level. The program has four levels that address students' decoding skills and six levels that address students' comprehension skills. All lessons in the program are sequenced and scripted.

Corrective Reading can be implemented in small groups of four to five students or in a whole-class format. Corrective Reading is intended to be taught in 45-minute lessons four to five times a week. For the single study reviewed in this report, only the word-level skills components of the Corrective Reading program were implemented.

**Research**

One study of Corrective Reading met the What Works Clearinghouse (WWC) evidence standards. This study included 79 third-grade students in Pennsylvania.

The WWC considers the extent of evidence for Corrective Reading to be small for alphabetics, fluency, and comprehension. No studies that met WWC evidence standards with or without reservations addressed general reading achievement.

**Effectiveness**

Corrective Reading was found to have potentially positive effects on alphabetics and fluency and no discernible effects on comprehension.

---

1. The descriptive information for this program was obtained from publicly available sources: the program’s web site (www.sraonline.com, downloaded April, 2007) and the research literature (Torgesen et al., 2006). The WWC requests developers to review the program description sections for accuracy from their perspective. Further verification of the accuracy of the descriptive information for this program is beyond the scope of this review.

2. The evidence presented in this report is based on available research. Findings and conclusions may change as new research becomes available.

3. These numbers show the average and range of student-level improvement indices for all findings in the study.
**Developer and contact**

*Corrective Reading* is distributed by SRA/McGraw-Hill.
Address: 220 East Danieldale Road Desoto, TX 75115-2490.

**Scope of use**

No information is available on the number of students or schools using the program.

**Teaching**

The program’s 45-minute lessons are designed for groups of up to 20 students, ideally five times a week. It has two components, decoding and comprehension, each with four levels. The number of lessons varies by component and level. Decoding level A, designed for non-readers, has 65 lessons. It emphasizes basic decoding skills: rhyming, sounding out, sentence reading, and story reading. Levels B1 and B2 (65 lessons) are designed for struggling readers who do not read fluently or who confuse similar words. These levels teach students to become automatic decoders, with the increased self-confidence to read 90 words per minute by the end of B1 and 120 words per minute by the end of B2. Level C (125 lessons) is designed for students who experience difficulty with vocabulary and complex sentence structures. This level bridges the gap between advanced word decoding skills and the ability to read informational text. All levels contain ongoing mastery tests and individual reading checkouts to assess individual student achievement.

*Corrective Reading* uses a direct instruction approach, a scripted presentation that uses a brisk pace, carefully chosen exercises and examples, and other presentation techniques. The publisher provides approximately seven hours of staff development that focuses on how to deliver direct instruction and use the program materials. Follow-up observations and coaching are recommended. A Teaching Tutor CD-Rom provides ongoing support for teachers using *Corrective Reading*.

**Cost**

Prices range by level (A, B1, B2, C) and content (decoding, comprehension). The cost of student materials ranges from $10 a student for level A programs to $50 a student for level C materials. Teacher materials cost approximately $200 per level.

**Research**

Twenty-five studies reviewed by the WWC investigated the effects of *Corrective Reading*. One study (Torgesen et al., 2006) was a randomized controlled trial that met WWC evidence standards. The remaining 24 studies did not meet evidence screens.

Torgesen et al. (2006) examined the effects of *Corrective Reading* on 79 third-grade students in eight school units in Pennsylvania. Students in the comparison group participated in the regular reading program at their schools.

---

4. The comprehension component, which was not evaluated in studies reviewed by the WWC, is not fully described here.
5. A school unit consists of several partnered schools so that the cluster included two third-grade and two fifth-grade instructional groups. Because of the age range of the beginning reading review, only data of the third graders were included in this review.
6. For the purposes of this study, only the word-level skill components of *Corrective Reading* were implemented, but the study noted that the complete version contains instructional routines and materials that also focus on comprehension and vocabulary.
7. The Extent of Evidence Categorization was developed to tell readers how much evidence was used to determine the intervention rating, focusing on the number and size of studies. Additional factors associated with a related concept, external validity, such as the students’ demographics and the types of settings in which studies took place, are not taken into account for the categorization.
The WWC considers the extent of evidence for Corrective Reading to be small for alphabets, fluency, and comprehension. No studies that met WWC evidence standards with or without reservations addressed general reading achievement.

### Effectiveness

#### Findings

The WWC review of interventions for beginning reading addresses student outcomes in four domains: alphabets, fluency, comprehension, and general reading achievement. The study included here covers three domains: alphabets, fluency, and comprehension. Within the alphabets domain, the study reported on one construct: phonics.

**Alphabets.** Torgesen et al. (2006) examined four outcomes under the phonics construct of the alphabets domain (Woodcock Reading Mastery Test–Revised (WRMT–R) word identification and word attack subtests and the Test of Word Reading Efficiency (TOWRE) phonetic decoding efficiency and sight word efficiency subtest). The authors reported statistically significant positive effects of Corrective Reading on two of these outcomes (WRMT–R word identification subtest and TOWRE sight word efficiency subtest). The statistical significance of these findings was confirmed by the WWC. The average effect size across the four outcomes was neither statistically significant nor large enough to be considered substantively important (that is, an effect size greater than 0.25).

**Fluency.** Torgesen et al. (2006) examined one outcome in this domain (the Oral Reading Fluency test) and reported statistically significant positive effects on this outcome. The WWC analysis confirmed the statistical significance of the finding.

**Comprehension.** Torgesen et al. (2006) examined two outcomes in this domain (WRMT–R passage comprehension subtest and the Group Reading Assessment and Diagnostic Evaluation (GRADE) passage comprehension subtest) and reported no statistically significant effects. The average effect size across the two outcomes was neither statistically significant nor large enough to be considered substantively important according to WWC criteria.

#### Rating of effectiveness

The WWC rates the effects of an intervention in a given outcome domain as positive, potentially positive, mixed, no discernible effects, potentially negative, or negative. The rating of effectiveness takes into account four factors: the quality of the research design, the statistical significance of the findings, the size of the difference between participants in the intervention and the comparison conditions, and the consistency in findings across studies (see the WWC Intervention Rating Scheme).

#### Improvement index

The WWC computes an improvement index for each individual finding. In addition, within each outcome domain, the WWC computes an average improvement index for each study and an average improvement index across studies (see Technical Details of WWC-Conducted Computations). The improvement index represents the difference between the percentile rank of the average student in the intervention condition versus the percentile rank of the average student in the comparison condition. Unlike the rating of effectiveness, the improvement index is based entirely on the size of the effect, regardless of the statistical significance of the effect, the study design, or the analyses. The improvement index can take on values between −50 and +50, with positive numbers denoting results favorable to the intervention group.

---

8. For definitions of the domains, see the Beginning Reading Protocol.
9. The level of statistical significance was reported by the study authors or, where necessary, calculated by the WWC to correct for clustering within classrooms or schools and for multiple comparisons. For an explanation, see the WWC Tutorial on Mismatch. See the Technical Details of WWC-Conducted Computations for the formulas the WWC used to calculate the statistical significance. In the case of Corrective Reading, no corrections for clustering or multiple comparisons were needed.
The WWC found Corrective Reading to have potentially positive effects on alphabets and fluency and no discernible effects on comprehension (continued).

The average improvement index for alphabets is +9 percentile points across all findings in the single study, with a range of +1 to +13 percentile points. The improvement index for the single outcome for fluency is +11 percentile points. The average improvement index for comprehension is +7 percentile points across all findings in the single study, with a range of +2 to +11 percentile points.

Summary

The WWC reviewed 25 studies on Corrective Reading. One study met the WWC evidence standards. Based on this one study, the WWC found potentially positive effects in the alphabets and fluency domains and no discernible effects in the comprehension domain. The evidence presented in this report may change as new research emerges.

10. A single-case design study was identified but is not included in this review because the WWC does not yet have standards for reviewing single-case design studies.

11. The sample is not appropriate to this review: the parameters for this WWC review specified that students should be in grades kindergarten through third grade during the time of the intervention; this study did not focus on the targeted grades.

12. Does not use a strong causal design: this study did not use a comparison group.

13. Does not use a causal design: this study, which used a randomized controlled trial design, combined two interventions and therefore the effects of Corrective Reading could not be isolated.

Disposition Pending

For more information about specific studies and WWC calculations, please see the WWC Corrective Reading Technical Appendices.

---

14. The sample is not appropriate to this review: the parameters for this WWC review specified that students should be in grades K–3; this study did not disaggregate students in the eligible range from those outside the range.

15. The disposition is pending development of WWC evidence standards for single subject designs.
