**Cause:** the beetle spread throughout the U.S. **Effect:** it infected elm trees with Dutch elm disease. **Cause:** the elm beetle infected elm trees with Dutch elm disease. **Effect:** elm trees across the nation died.
Skill 12: **HOW TO** Determine Cause and Effect

1. Answers will vary, but should include: it spread out of control in the southeastern U.S.

2. Possible causes: people found it attractive, people found that it had many benefits, it was used for erosion control, farmers used it for grazing

3. Possible effects: it kills trees, it damages buildings, it pulls down power lines, it grows so fast that it’s difficult to control, it makes it difficult for other plants to survive, it upsets the balance of native species
