

FOR IMMEDIATE RELEASE

St. Louis Based Gateway Low Vision Helps Low Vision Patients Find New Lease on Life with Special Low Vision Solutions

St. Louis, MO – Gateway Low Vision, a low vision optometry practice, helps low vision patients with a task-based approach to vision enhancement. People with degenerative diseases such as Macular Degeneration, Stargardt's Disease, Albinism, Retinitis Pigmentosa, and Diabetic Retinopathy have come to realize that there is life after vision loss. Dr. Jill Mogil, optometrist and low vision specialist is the Clinical Director of St. Louis, Missouri based Gateway Low Vision. Beyond providing highly specialized low vision glasses and devices that improve patients' vision, Dr. Mogil brings hope to people who were under the impression that nothing more could be done to help them see better. While other dedicated eye care professionals provide needed treatments, Dr. Mogil provides vision-enhancing solutions.

Through her practice, Dr. Mogil teaches people that there are solutions available that can help low vision patients take control of their lives. Dr. Mogil emphasizes direct communication and understands that low vision solutions may not help everyone. For this reason, Dr. Mogil and the Gateway Low Vision team offer an in-depth, complimentary telephone consultation to ascertain the patient's needs, impart information about low vision resources and determine whether the patient can benefit from low vision devices. People travel several hours from various parts of Missouri to seek Dr. Mogil's unique and exceptional services.

“We understand how difficult it can be when a degenerative eye condition means your vision has declined significantly,” says Dr. Mogil. “For many people, poor vision means that they cannot cook, read, embroider, or perform other activities that add to their quality of life. We work with patients to provide customized corrective eyewear to enable them to do the tasks they desire to do.” Gateway Low Vision is the solution for those who have all but given up on their ability to improve their vision and lives. According to Dr. Mogil, “even if you have been told nothing more can be done, it's worth having a telephone consultation to see what can be achieved.”

Dr. Mogil offers many low vision solutions, including prescription, surgeon-grade magnifying glasses, also known as bioptic telescopes, that are specific to both the person's eye condition and the tasks they wish to perform. Other solutions include E-Scoop glasses and other wearable, smart visual assistive devices. The team at Gateway Low Vision understands that treating low vision is not just about taking care of the underlying medical problem, it is also about working with each patient individually to match them with the resources that best suit their lifestyle and help them to see better. Dr. Mogil and her team are excited to provide low vision solutions to people in St. Louis, Missouri, and beyond.

About Dr. Jill Mogil and Gateway Low Vision

Dr. Jill Mogil is a fellow of the International Academy of Low Vision Specialists and is one of Missouri's most trusted low vision specialists. Dr. Mogil has dedicated her career to helping people with poor vision reclaim their lives and find the resources that allow them to do the things they love most. Dr. Mogil recognizes that vision loss can often lead to depression, loss of independence, and reduced quality of life. She is honored to be a part of the team of doctors that include optometrists, ophthalmologists, and retina specialists who provide a holistic patient-first approach.
