Spatial Index, for FOAM
Early-stage UX, Product Design

The FOAM Spatial Index is a map-based means of viewing 'space' defined in the FOAM ecosystem. Along with General Trademark, I explored several structures the system could have inhabited.

Tumblr 2, for Tumblr
Product Design

One of the larger projects I've been involved with recently has been the complete overhaul and re-development of Tumblr, which has historically been a microblogging platform. Throughout the span of the project, I took on the reconceptualization of many aspects of the overall product, ranging from user authentication and safety to the creation/presentation of atomic bits of content in Tumblr's main feed.

IBM Community Radio
Website, Front-end development, Art Direction, Community Building

IBM Community Radio was a side-project-turned-platform for critical thought, culture renewal, and good music. I prototyped the initial front-end player/schedule interfaces, co-ordinated formative on-air content, and educated folks on how to get up and running quickly on the network. As of November 2016, IBM Community Radio had been cited as reaching "...between 5,000 and 6,000 people [within IBM] daily."

Are.na Unsolicited Works
Web Design, Product Design

In the manner most associated with open source software development, I've contributed a fair amount of unsolicited design works to the development of Are.na, a platform for freeform research and knowledge-linking.
