

**Errata for the 1st Printing of
"Understanding Digital Signal Processing, 2/E",
by Richard Lyons**

I beg your pardon for the typographical errors in this 1st edition. (Almost 40% of those errors were caused by faulty software at the Printer, and those errors could not be detected until after the 1st edition is actually printed.) It will not take long to make these corrections. I promise.

-Rick Lyons-

Page 7: In the third line below Eq. (1-7), the text:

"... indicate that $X_{\text{sum}}(n)$ has a frequency ..."

The uppercase "X" should be lowercase "x" as:

"... indicate that $x_{\text{sum}}(n)$ has a frequency ..."

Page 23: Equation(2-3), ends with the text:

$$\text{"... } \sin(2\pi(f_0 + \frac{1}{32})nt_s) \quad (2-3)$$

The $\frac{1}{32}$ should be $\frac{m}{nt_s}$ & there is a missing "final" right parenthesis, and period, after the " nt_s ". The Eq. (2-3) should end with:

$$\text{"... } \sin(2\pi(f_0 + \frac{m}{nt_s})nt_s). \quad (2-3)$$

Page 34: In the 5th line down, the text:

"... where spectral replications do not butt up against each other except at zero Hz."

is confusing. Please edit it as follows:

$$H_5(z) = \left[\frac{1-z^{-5}}{1-z^{-1}} \right]^M = (1+z^{-1}+z^{-2}+z^{-3}+z^{-4})^M \quad (13-122)$$

should have been M exponents raised to be printed as:

Below are corrections to an *unexplainable* (!!) number of errors in the Index. (No one that I spoke to at the publisher's seems to know how this happened.) These corrections, which took me many hours to compile, won't take you too long to make. Although some people do not think these corrections are important, I do because the Index is a VERY important part of a book. On behalf of my publisher, I beg your pardon for the following errors.
