

# Updates in COPD 2024

**Our Values**

- Respect and Integrity  
We Honor All People
- Teamwork and Collaboration  
We Are Better Together
- Excellence and Innovation  
We Seek To Advance
- Diversity and Inclusion  
We Value Each Other

UNIVERSITY of MARYLAND MEDICAL CENTER

1

## Disclosures

The presenter has no conflicts of interest to disclose.

**Our Values**

- Respect and Integrity
- Teamwork and Collaboration
- Excellence and Innovation
- Diversity and Inclusion

2

## Objectives

- Review the updates on COPD management in recent guidelines, specifically Global initiative for Chronic Obstructive Lung disease (GOLD) 2024
- Understand blood eosinophil guided therapy for COPD exacerbation
- Understand the mechanism of action, efficacy and safety of biologics in COPD management and available evidence
- Discuss smoking cessation and coverage issues
- Vaccination update in COPD

**Our Values**

- Respect and Integrity
- Teamwork and Collaboration
- Excellence and Innovation
- Diversity and Inclusion

3

## What is COPD?

A heterogeneous lung condition characterized by chronic respiratory symptoms (dyspnea, cough, expectoration, exacerbations) due to abnormalities of the airway (bronchitis, bronchiolitis) and/or alveoli (emphysema) that cause persistent, often progressive, airflow obstruction"

<https://pubmed.ncbi.nlm.nih.gov/36958741>

**Our Values**

- Respect and Integrity
- Teamwork and Collaboration
- Excellence and Innovation
- Diversity and Inclusion

4

## Gold Guideline 2024: evidence category

Evidence Category	Source of Evidence
A	Randomized Controlled Trials (RCTs)
	Rich body of high quality evidence without any significant limitations or bias
B	Randomized Controlled Trials (RCTs) with important limitations
	Limited body of evidence
C	Non-Randomized trials
D	Observational studies
	Panel Consensus Judgement

**Our Values**

- Respect and Integrity
- Teamwork and Collaboration
- Excellence and Innovation
- Diversity and Inclusion

5

## Risk Factors of COPD

**GETomics**- Gene (G)-environment (E) interactions occurring over the lifetime (T) of the individual that can damage the lungs and/or alter their normal development/aging process

- Gene-  $\alpha$ 1- antitrypsin deficiency
- Environmental-
  - Smoking History:
    - Cigarette-packs years (packs cigarettes per day x years smoking)
    - Others- e.g., pipe, cigar, water pipe and marijuana
  - Host factors
- InTeractions occurring over lifetime
  - Exposure
  - Infection

**Our Values**

- Respect and Integrity
- Teamwork and Collaboration
- Excellence and Innovation
- Diversity and Inclusion

6

## Burden of COPD

- One of the **top three causes** of death worldwide
- Cause around **three million deaths annually** globally
- In the United States the costs attributable to COPD are expected to increase over the next 20 years, with projected costs of **\$800.90 billion or \$40 billion per year**
- In the United States, COPD is the **second leading cause of reduced DALY**, trailing only ischemic heart disease

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

7

## COPD Assessment

- **Severity** of airflow obstruction
  - Spirometry
    - Forced Vital Capacity (FVC)
    - Forced Expiratory Volume in 6 seconds (FEV6)
    - Forced Expiratory Volume in 1 seconds (FEV1)
    - Ratio FEV1/FVC
- Nature and magnitude of current **symptoms**
- Previous **history** of moderate and severe exacerbations
- **Blood eosinophil count**
- Presence and type of other diseases (**multimorbidity**)
  - Alpha-1 antitrypsin screening

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

8

## COPD Assessment tools

- COPD Assessment Test (CAT)

- Modified medical research Council (mMRC) dyspnea scale

### Modified Medical Research Council (mMRC) dyspnea scale

Grade	Description of breathlessness
0	I only get breathless with strenuous exercise
1	I get short of breath when hurrying on level ground or walking up a slight hill
2	On level ground, I walk slower than people of the same age because of breathlessness, or have to stop for breath when walking at my own pace
3	I stop for breath after walking about 100 yards or after a few minutes on level ground
4	I am too breathless to leave the house or I am breathless when dressing

Adapted from: Fletcher CM, Jones DC, Partridge AD, Wood CH. The significance of respiratory symptoms and the diagnosis of chronic bronchitis in a working population. *Br Med J* 1976; 3:267.

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

9

## Gold Grades and Severity of Airflow Obstruction in COPD (Based on post-bronchodilator FEV1)

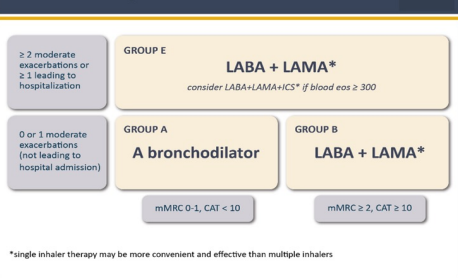

<b>GOLD 1:</b>	<b>Mild</b>	<b>FEV1/FVC &lt;0/7</b> <b>FEV1 ≥ 80% predicted</b>
<b>GOLD 2:</b>	<b>Moderate</b>	<b>FEV1/FVC &lt;0/7</b> <b>≤50% FEV1 &lt; 80% predicted</b>
<b>GOLD 3:</b>	<b>Severe</b>	<b>FEV1/FVC &lt;0/7</b> <b>≤30% FEV1 &lt; 50% predicted</b>
<b>GOLD 4:</b>	<b>Very severe</b>	<b>FEV1/FVC &lt;0/7</b> <b>FEV1 &lt;30% predicted</b>

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

10

## Initial Pharmacological Treatment

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

11

## Prevention & Management of COPD: Group A

mMRC 0-1, CAT <10 and 0-1 **Minimal symptoms moderate exacerbations and no hospitalization**

### Short- or a long-acting bronchodilator

- SABA
  - AccuNeb, Proair HFA, Proventil HFA, Ventolin HFA (albuterol), Xopenex HFA<sup>®</sup> (Levalbuterol)
- SAMA
  - Atrovent<sup>®</sup> (Ipratropium)
- SAMA-SABA
  - Combivent<sup>®</sup> (Ipratropium/albuterol)
- LABA
  - Serevent<sup>®</sup> (salmeterol), Foradil<sup>®</sup> (formoterol), Striverdi<sup>®</sup> (olodaterol).
- LAMA
  - Genuair<sup>®</sup> (acclidinium), Breezhaler<sup>®</sup> (glycopyrronium), Spiriva<sup>®</sup> HandiHaler, Respimat (tiotropium), Incruse Ellipta<sup>®</sup> (umeclidinium)

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

12

## Prevention & Management of COPD: COPD: Group B

mMRC  $\geq 2$  or CAT  $\geq 10$ , and with  $\leq 1$  moderate exacerbation in the year and no hospitalization

- LAMA+LABA
  - Anoro<sup>®</sup> (umeclidinium and vilanterol), Stiolto<sup>®</sup> (olodaterol and tiotropium), Utibron<sup>®</sup> (indacaterol and glycopyrrolate)
- LAMA
  - Genuair<sup>®</sup> (acclidinium), Breezhaler<sup>®</sup> (glycopyrronium), Spiriva<sup>®</sup> HandiHaler, Respimat (tiotropium), Incruse Ellipta<sup>®</sup> (umeclidinium)
- LABA
  - Serevent<sup>®</sup> (salmeterol), Foradil<sup>®</sup> (formoterol), Striverdi<sup>®</sup> (olodaterol).

LABAs and LAMAs significantly improve lung function, dyspnea, health status, and reduce exacerbation rates (Evidence A)

LAMAs Have a greater effect on exacerbation reduction compared with LABAs and decrease hospitalizations (Evidence A)

Our Values

13

13

## Prevention & Management of COPD: Group E

$\geq 2$  moderate exacerbations or  $\geq 1$  leading to hospitalization

- LAMA+LABA Plus SABA
- LABA+LABA+ICS - if eos  $\geq 300$  cells/ $\mu$ L (practical recommendation)
  - Trelegy Ellipta<sup>®</sup> (fluticasone-furoate/vilanterol/umeclidinium)
  - Breztri Aerosphere<sup>®</sup> (budesonide/glycopyrronium/formoterol)
  - Trimbow<sup>®</sup> (beclometasone dipropionate, formoterol fumarate dihydrate and glycopyrronium bromide)\*
- Roflumilast (Daliresp<sup>®</sup>, Zoryve<sup>®</sup>)
- Azithromycin

For patients with COPD and asthma, treatment protocol for asthma should followed.

Our Values

14

14

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

15

15

## Select the correct answer

- For patient with Asthma and COPD, pharmacotherapy for Asthma should be followed

☐ True

☐ False

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

16

16

## Select the correct answer

- For patient with Asthma and COPD, pharmacotherapy for Asthma should be followed

☒ True

☐ False

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

17

17

## COPD Exacerbation

- Mild
  - SABA (Increased frequency)
  - LABA+LABA
  - LABA+LABA+ICS (if blood eosinophil counts  $\geq 100$  cells/ $\mu$ L)
  - Macrolide Antibiotics (e.g. azithromycin)
- Moderate
  - LABA+LABA
  - LABA+LABA+ICS (if blood eosinophil counts  $\geq 100$  cells/ $\mu$ L)
  - Roflumilast (if at least one hospitalization for AECOPD in a year)
  - Macrolide Antibiotics (e.g. azithromycin)
  - Antivirals
  - Prednisone 40mg daily x 5 days

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

18

18

## COPD Exacerbation : Severe

- LABA+LAMA
- LABA+LAMA+ICS (if blood eosinophil counts  $\geq 100$  cells/ $\mu$ L)

### Others-

- Roflumilast (if at least one hospitalization for AECOPD in a year)
- Macrolide Antibiotics (e.g. azithromycin)
- Antivirals
- Prednisone 40mg daily x 5 days
- Opioids
- $\alpha$ -antitrypsin

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

19

19

## COPD Exacerbation : Considerations for ICS

### Strongly favors

- History of Hospitalization
- $\geq 2$  moderate exacerbations per year
- Blood eos  $\geq 300$  cells/ $\mu$ L
- History of, or concomitant asthma

### Favors

- 1 moderate exacerbation per year
- Blood eos 100 to  $\leq 300$  cells/ $\mu$ L

### Oppose

- Pneumonia or other side effects
- Blood eos  $\leq 100$  cells/ $\mu$ L
- History of mycobacterial infection

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

20

20

## Select the correct answer

- LABAs has greater effect on exacerbation reduction compared with LAMAs
- LAMAs has greater effect on exacerbation reduction compared with LABAs
- Short acting agents are preferred over LAMAs and LABAs except for patients only with occasional dyspnea
- Combination with a treatment of a LABA and a LAMA does not increase FEV1 or reduce symptoms compared with monotherapy

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

21

21

## Select the correct answer

- LABAs have greater effect on exacerbation reduction compared with LAMAs
- LABAs have greater effect on exacerbation reduction compared with LABAs
- Short acting agents are preferred over LAMAs and LABAs except for patients only with occasional dyspnea
- Combination with a treatment of a LABA and a LAMA does not increase FEV1 or reduce symptoms compared with monotherapy

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

22

22

## Role of Eosinophil in COPD

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

23

23

## COPD and Biomarkers

- Type-1 COPD
  - Neutrophils
- Type-2 COPD
  - Eosinophils
  - Sustained inflammation and possible tissue damage
  - Increased exacerbations

Recently GOLD has introduced the blood eosinophil count as a biomarker for estimating the efficacy of inhaled corticosteroids (ICS) for the prevention of exacerbations.

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

24

24

## COPD and Role of Eosinophils

- Eosinophil, key immuno-effector and inflammatory cell
- Infiltration into airways occur with inflammatory signals and recruitment
  - T Helper type-2 Cells
    - IL-5 and other chemoattractant secretion
  - Locally produced
    - IL-4 and IL-13 increase adhesives

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

25

25

## Role of Eosinophils on COPD

David B, Bafadhel M, Koenderman L, et al. Eosinophilic inflammation in COPD: from an inflammatory marker to a treatable trait. *Thorax* 2021;76:188-195.

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

26

26

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

27

27

## COPD and Role of Eosinophils

- Diagnosis
  - Blood Eosinophils:  $\geq 300$  cells/ $\mu$ L
  - Sputum Eosinophils:  $\geq 3\%$
- Treatment
  - ICS
  - Biologics (under study)
    - ADCC pathway. E.g. Benralizumab (Fasenra)
    - Anti-IL 5 e.g. Mepolizumab (Nucala), Reslizumab (Cinqair)
    - Anti-IL 4 and IL-13 e.g. Dupilumab (Dupident)
    - Anti-TSLP e.g. Tezepelumab (Tezspire)

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

28

28

## COPD and Role of Eosinophils

Few studies on biologics-

- Benralizumab – GALATHEA, TERRANOVA
- Mepolizumab- METREX and METREO
- Dupilumab- BOREAS

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

29

29

## What Gold states on biologics

BOREAS showed clear clinical effects of dupilumab in a selected subgroup of COPD patients.

**GOLD 2024 acknowledges the results of the BOREAS study pending confirmation studies.**

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

30

30

## BOREAS Trial

- Phase 3 trial:
  - Dupilumab 300mg every 2 weeks add on therapy vs placebo
- Patient selection:
  - Physician diagnosed COPD  $\geq 12$  months
  - Current (30% cap) or former smokers
  - 40 to 80 years of age
  - FEV1/FVC  $< 0.70$
  - FEV1- 30% to 70% or predicted value
  - Triple therapy  $\geq 3$  months (stable dose x 1 month)
  - Eos  $\geq 300$  cells/ $\mu$ L
  - 2 moderate exacerbations or 1 severe exacerbation in the past year
  - Exclusion: Asthma
- Baseline characteristics were similar

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

31

31

## BOREAS Trial

- Primary end point
  - Annualized rate of moderate or severe exacerbations
- Secondary
  - Change in FEV1 at 12 and 52 weeks
  - Change in FEV1 in patients with FeNO level of  $\geq 20$  ppb
  - Change in St. George's Respiratory Questionnaire (SGRQ) total score at 52 weeks
    - Minimum clinically important difference of 4
  - Evaluating Respiratory Symptoms in COPD (E-RS-COPD) total score
  - Annualized rate of moderate or severe COPD exacerbations among the patients who had a FeNO level  $\geq 20$  ppb

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

32

32

## BOREAS Trial

- Statistics
  - Intent to treat population (ITT)
  - 924 patients to reach a power of 90% to detect difference in annualized rate of COPD exacerbations of 2% at week 52 with 2sided alpha of 0.049
  - Primary endpoint analyzed with negative binomial model
  - Secondary end points were evaluated with mixed effects model

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

33

33

## BOREAS Trial

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

34

34

## BOREAS Trial

	Placebo	Dupilumab	P-Value
Annualized COPD moderate to severe exacerbation	1.10 (0.93 to 1.30)	0.78 (0.64 to 0.93)	<0.001
Change in prebd FEV1 at week 12	0.077 (0.042 to 0.112)	0.160 (0.126 to 0.195)	<0.001
Change in prebronchodilator FEV1 from baseline to wk 52	0.070 (0.033 to 0.107)	0.153 (0.116 to 0.189)	<0.001
Change in prebronchodilator FEV1 from baseline to wk 12 among patients with a baseline FeNO $\geq 20$ ppb	0.108 (0.038 to 0.177)	0.232 (0.164 to 0.299)	0.002
Change in prebronchodilator FEV1 from baseline to wk 52 among patients with a baseline FeNO $\geq 20$ ppb	0.120 (0.047 to 0.192)	0.247 (0.176 to 0.318)	0.003

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

35

35

## BOREAS Trial

Change in SGRQ total score from baseline to wk 52	-6.4 (-8.0 to -4.8) -9.7	(-11.3 to -8.1)	0.002
SGRQ total score improvement $\geq 4$ points at wk 52	43.1 (38.6 to 47.7)	51.5 (46.9 to 56.1)	0.009
Change in E-RS-COPD total score from baseline to wk 52	-1.6 (-2.1 to -1.1)	-2.7 (-3.2 to -2.2)	0.001
Annualized rate of moderate or severe exacerbations of COPD among patients with a baseline FeNO $\geq 20$ ppb	1.12 (0.83 to 1.50)	0.70 (0.51 to 0.96)	0.005

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

36

36

## BOREAS Trial

**Table 3. Adverse Events (Safety Population).<sup>a</sup>**

Event	Placebo (N = 470)	Dupilumab (N = 469)
	no. of patients (%)	
Any adverse event	357 (76.0)	363 (77.4)
Any serious adverse event	73 (15.5)	64 (13.6)
Any adverse event leading to death	8 (1.7)	7 (1.5)
Any adverse event leading to permanent discontinuation of placebo or dupilumab	16 (3.4)	14 (3.0)
Adverse events occurring in ≥5% of patients in either group		
Nasopharyngitis	45 (9.6)	44 (9.4)
Upper respiratory tract infection	46 (9.8)	37 (7.9)
Headache	32 (6.8)	38 (8.1)
COPD	28 (6.0)	27 (5.8)
Covid-19	27 (5.7)	19 (4.1)
Hypertension	28 (6.0)	17 (3.6)
Diarrhea	17 (3.6)	25 (5.3)
Back pain	16 (3.4)	24 (5.1)
Major adverse cardiovascular event <sup>b</sup>	9 (1.9)	4 (0.9)

<sup>a</sup> Data were pooled from the BOREAS trial. <sup>b</sup> Data were pooled from the BOREAS trial.

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

37

37

## BOREAS Trial

- Strengths
  - Adequately powered
  - International trial
  - Low drop-out rate
  - Similar adverse effects
- Limitations
  - COVID during trial
  - Randomization not stratified based on smoking status

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

38

38

## BOREAS Trial

- Dupilumab showed reduction in moderate to severe COPD exacerbations
  - EXACT defined exacerbations
- Need additional trials, unsure of place in therapy at this time

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

39

39

## Dupilumab (Dupixent®)

- Interleukin-4 receptor antagonist
  - Inhibits IL-4 and IL-13
- Binds to IL-4 receptor alpha subunit → inhibiting IL-4 and IL-13 cytokine induced responses

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

40

40

## Dupilumab (Dupixent®)

- SC injection
- Thigh, lower abdomen, or upper arm (rotating inj. sites)
- Primarily degraded into peptides and amino acids by catabolism
- Approx 1 week to peak conc.

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

41

41

## Dupilumab (Dupixent®)

### Common S.E

- injection site reactions
- eye and eyelid inflammation, including redness, swelling, and itching, sometimes with blurred vision
- cold sores in your mouth or on your lips
- high count of a certain white blood cell (eosinophilia)

Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

42

42

### Select the correct answer

- There is evidence of beneficial role of antitussives in people with COPD
- Vasodilators improve outcome and oxygenation
- Low dose long acting oral and parenteral opioids may be considered for treating dyspnea in COPD patients with severe diseases
- Intravenous augmentation therapy does not slow down the progression of emphysema

#### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

43

43

### Select the correct answer

- There is evidence of beneficial role of antitussives in people with COPD
- Vasodilators improve outcome and oxygenation
- Low dose long acting oral and parenteral opioids may be considered for treating dyspnea in COPD patients with severe diseases
- Intravenous augmentation therapy does not slow down the progression of emphysema

#### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

44

44

### Non-Pharmacological Management of COPD

#### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

45

45

### Non-Pharmacological Management of COPD

- Vaccinations
- Smoking Cessation
- Self Management Education and Physical Activity
- Pulmonary Rehabilitation

#### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

46

46

### Non-Pharmacological Management of COPD: Vaccination

- Influenza
- Covid-19 (SARS-CoV-2)
- Pneumococcal: (PCV20 or PCV15 and PPSV23)
- Pertussis (Tdap -dTdap/dTPa)
- Shingles
- RSV\*

#### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

47

47

### Non-Pharmacological Management of COPD: Smoking Cessation

#### Patient group A, B and E

- Smoking Cessation Essential
- Can include pharmacological treatment
- Counselling should be delivered with 5A (Ask, Advise, Assess, Assist, Arrange) strategy in mind

#### Available pharmacological products:

- Varenicline (Chantix®)
- Nicotine replacement products (Nasal spray, Patch, Lozenges, Gums)
- Bupropion sustained release (Zyban®)
- Nortriptyline

#### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

48

48

## Non-Pharmacological Management of COPD: Smoking Cessation

- Nicotine Replacement Therapy (NRT)
  - Nicotine patch 21mg, 14mg, 7mg
    - > 10 cigarettes per day → 21mg
    - ≤ 10 cigarettes per day → 14mg
  - Nicotine Gum 2mg and 4mg
    - 1 piece every hour as needed
    - Instruct on appropriate administration (chew and park)
    - Trouble for people with poor dentition
  - Nicotine Lozenge 2mg and 4mg
    - 1 lozenge every hour as needed
    - DO NOT CHEW

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

49

49

## Non-Pharmacological Management of COPD: Smoking Cessation -Coverage

- Nicotine Inhaler
  - 10mg cartridge
  - Quick breaths holding in mouth
- Nicotine Nasal Spray
  - 1 spray each nostril every 1 to 2 hours

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

50

50

## Non-Pharmacological Management of COPD: Smoking Cessation

- Medicare does cover Rx only (NOT OTC products)
  - Medicare/Medicaid plans
  - Advantage Plans
- **Maryland Medicaid (Not MCOs) covers OTC and Rx products**
- Commercial Plans
- 1-800-QUIT NOW
- Midtown Pulmonary Clinic

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

51

51

## Non-Pharmacological Management of COPD: Smoking Cessation -Coverage

- Medicare will cover as inhaler and nasal spray as Rx -not OTC
- MD Medicaid: Requires prior authorization for coverage of NRT
- Commercial plans: Increased cost

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

52

52

## Non-Pharmacological Management of COPD: Smoking Cessation

- Bupropion
  - 150 mg/day for 3 days, then 150 mg twice a day
  - Initiate 1 to 2 weeks prior to quit date
    - Lowers seizure threshold
- Varenicline
  - 0.5 mg/day for 3 days, then 0.5 mg twice a day for 4 days, then 1 mg twice a day
  - Initiate 1 to 2 weeks prior to quit date
    - Insomnia, vivid dreams, "neuropsychiatric symptoms"

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

53

53

## Non-Pharmacological Management of COPD: Smoking Cessation -Coverage

- Bupropion
  - Medicare
  - MD Medicaid
  - Commercial Plans
- Varenicline
  - Medicare
  - MD Medicaid: Prior authorization
  - Commercial Plans

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

54

54

## Non-Pharmacological Management of COPD: Pulmonary Rehabilitation

- Patient Group B and Group E only
- Facilities in our area
  - UMMC Midtown
  - UM BMMC
  - Johns Hopkins Howard County General Hospital
  - Medstar
  - St. Agnes
  - Lifebridge Carol hospital

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

54

55

## Select the correct answer

- Which group should get RSV vaccine per new recommendation?

- ☐ Individuals over 60 years and/or with chronic heart or lung disease
- ☐ Individuals over 65 years and or with chronic heart or lung disease
- ☐ Individuals over 60 years and with chronic lung disease
- ☐ Individuals over 65 years and with chronic lung disease

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

56

56

## Select the correct answer

- Which group should get RSV vaccine per new recommendation?

- ☐ Individuals over 60 years and/or with chronic heart or lung disease
- ☐ Individuals over 65 years and or with chronic heart or lung disease
- ☐ Individuals over 60 years and with chronic lung disease
- ☐ Individuals over 65 years and with chronic lung disease

### Our Values

Respect and Integrity | Teamwork and Collaboration | Excellence and Innovation | Diversity and Inclusion

57
