## CASINO FEEDS

### Rest API

➤ `/pi/jackpot/games.{responseformat}`

Returns all the available jackpot games for specified brand and supported on the specified device group. Further filtering can be done based on the supported device operating system, game tags, gameIds and categories. Also use `oneJackpotPerGame` to fetch only the highest jackpot for each game. `startIndex` and `nrOfRows` can be used like pagination to fetch results from the result set.

Parameters	Description	Usage Examples
<code>app_id</code>	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	<code>xxxxxxxx</code>
<code>app_key</code>	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	<code>xxxxxxxxxxxxxxxxxxxxxxxxxxxx xxxxxxxx</code>
<code>responseformat</code>	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	<code>json</code>
<code>brand</code>	Filter by brand.	<code>unibet</code>
<code>locale</code>	Filter by locale.	<code>it_IT</code>
<code>jurisdiction</code>	Filter by jurisdiction.	<code>IT</code>
<code>deviceGroup</code>	Filter the result on games that is supported on specified device.	<code>desktop</code>
<code>deviceOs</code>	Filter the result on games that is supported on specified os.	<code>windows</code>
<code>gameTagIds</code>	Filter on those games that are tagged with these tags.	<code>arcade</code>
<code>gameCategories</code>	Filter on those games that are tagged with these categories.	<code>softgames</code>
<code>gameIds</code>	Filter by gameId(s), comma separated list. Use the same API to find the interested gameIds	<code>megafortune_not_mobile @netent</code>
<code>maxRows</code>	Number of results to be returned.	<code>50</code>
<code>currency</code>	Currency for amounts converting.	<code>GBP</code>
<code>startIndex</code>	Pagination parameter to indicate the starting index within the result set.	<code>1</code>
<code>nrOfRows</code>	Pagination parameter to indicate the number of results to be fetched from start index from the result set.	<code>50</code>
<code>oneJackpotPerGame</code>	Only show highest jackpot for each game.	<code>true</code>

#### Usage example:

- Get only highest Jackpot games supported on windows desktop for Swedish unibet brand:  
`/pi/jackpot/games.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&deviceOs=windo  
ws&maxRows=0&currency=EUR&startIndex=0&nrOfRows=10&oneJackpotPerGame=true`

`/pi/jackpot/games.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&deviceOs=windo  
ws&gameCategories=poker&oneJackpotPerGame=true`

➤ `/pi/wins/latest.{responseformat}`

Returns the latest wins that are max 1 day old for specified brand and supported on the specified device group. Further filtering can be done based on the supported device operating system, game tags and categories. Also use `useGlobal` flag to base searches without locale parameter.

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xxxxxxxxxxxxxxxxxxxxxxxxxxxx xxxxxxxx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json
brand	Filter by brand.	unibet
locale	Filter by locale.	it_IT
jurisdiction	Filter by jurisdiction.	IT
clientId	To filter by clientId (desktop, shortbread, native)	desktop
deviceGroup	Filter the result on games that is supported on specified device.	desktop
deviceOs	Filter the result on games that is supported on specified os.	windows
tags	Filter on those games that are tagged with these tags	arcade
categories	Filter on those games that are tagged with these categories.	softgames
maxRows	Number of results to be returned.	50
currency	Currency for amounts converting.	GBP
useGlobal	Base searches without locale parameter.	true

**Usage example:**

- Get latest wins supported on windows desktop for Swedish unibet brand:  
/pi/wins/latest.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&maxRows=20&currency=EUR&useGlobal=true

➤ /pi/wins/top.{responseformat}

Returns top wins for specified period. Further filtering can be done based on the supported device operating system, game tags, game Ids and categories. Also use useGlobal flag to base searches without locale parameter.

startIndex and nrOfRows can be used like pagination to fetch results from the result set.

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xxxxxxxxxxxxxxxxxxxxxxxxxxxx xxxxxxxx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json
brand	Filter by brand.	unibet
locale	Filter by locale.	it_IT
jurisdiction	Filter by jurisdiction.	IT
clientId	To filter by clientId (desktop, shortbread, native)	desktop
deviceGroup	Filter the result on games that is supported on this device.	desktop
deviceOs	Filter the result on games that is supported on this os.	windows
tags	Filter on those games that are tagged with these tags	arcade
categories	Filter on those games that are tagged with these categories.	softgames
maxRows	Number of results to be returned.	50

startIndex	Pagination parameter to indicate the starting index within the result set.	1
nrOfRows	Pagination parameter to indicate the number of results to be fetched from start index from the result set.	50
period	Filter date period, Results can be filtered on week or month.	month
month	Filter by month in case of period is selected as month. Supported format 'yyyy-MM'.	2019-04
useGlobal	Base searches without locale parameter.	true

**Usage example:**

- Get all top wins for Jan 2019 for unibet SE:  
/pi/wins/top.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&maxRows=20&startIndex=0&nrOfRows=10&currency=EUR&period=month&month=2019-01&useGlobal=true

➤ /pi/games/popular.{responseformat}

Returns most popular games. Further filtering can be done based on the supported device operating system, game tags and categories. Also use useGlobal flag to base searches without locale parameter.

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json
brand	Filter by brand.	unibet
locale	Filter by locale.	it_IT
jurisdiction	Filter by jurisdiction.	IT
clientId	To filter by clientId (desktop, shortbread, native)	desktop
deviceGroup	Filter the result on games that is supported on specified device.	desktop
deviceOs	Filter the result on games that is supported on specified os.	windows
tags	Filter on those games that are tagged with these tags	arcade
categories	Filter on those games that are tagged with these categories.	softgames
maxRows	Number of results to be returned.	50
startIndex	Pagination parameter to indicate the starting index within the result set.	1
nrOfRows	Pagination parameter to indicate the number of results to be fetched from start index from the result set.	50
useGlobal	Base searches without locale parameter.	true
daysBack	How many days data will be used	90

**Usage example:**

- Get popular games for last 90 days:  
pi/games/popular.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&maxRows=20&startIndex=0&nrOfRows=10&useGlobal=true&daysBack=90

➤ /pi/jackpot/current.{responseformat}

Returns all current jackpots. Further filtering can be done based on the supported device operating system, game tags, gameIds and categories. Also use oneJackpotPerGame to fetch only the highest jackpot for each game.

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx xxxxxxxx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json
brand	Filter by brand.	unibet
locale	Filter by locale.	it_IT
jurisdiction	Filter by jurisdiction.	IT
deviceGroup	Filter the result on games that is supported on this device.	desktop
deviceOs	Filter the result on games that is supported on this os.	windows
gameTagIds	Filter on those games that are tagged with these tags.	arcade
gameCategories	Filter on those games that are tagged with these categories.	softgames
gameIds	Filter by gameId(s), comma separated list.	
maxRows	Number of results to be returned.	50
currency	Currency for amounts converting.	GBP
oneJackpotPerGame	Only show highest jackpot for each game.	true

**Usage example:**

- Get current jackpots supported on windows desktop for Swedish unibet brand:  
/pi/jackpot/current.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&maxRows=0&currency=EUR&oneJackpotPerGame=true
- Get current jackpots for poker:  
/pi/jackpot/current.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&gameCategories=poker&maxRows=0&currency=EUR&oneJackpotPerGame=true

➤ /pi/jackpot/currentjackpotstotal.{responseformat}

Returns total jackpot value across devices for specified locale and currency.

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx xxxxxxxx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json
brand	Filter by brand.	unibet
jurisdiction	Filter by jurisdiction.	IT
currency	Currency for amounts converting.	GBP
locale	Filter by locale.	it_IT

**Usage example:**

- Get total jackpot value for unibet UK:  
/pi/jackpot/currentjackpottotal.json?brand=unibet&jurisdiction=UK&currency=GBP&locale=en\_GB

➤ /pi/games/recommended.{responseformat}

Returns all the recommended games based on the specified gameId. Further filtering can be done based on the supported device operating system, game tags and categories. Also use useGlobal flag to base searches without locale parameter.

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json
brand	Filter by brand.	unibet
locale	Filter by locale.	it_IT
jurisdiction	Filter by jurisdiction.	IT
clientId	To filter by clientId (desktop, shortbread, native)	desktop
deviceGroup	Filter the result on games that is supported on this device.	desktop
deviceOs	Filter the result on games that is supported on this os.	windows
Tags	Filter on those games that are tagged with these tags	arcade
categories	Filter on those games that are tagged with these categories.	softgames
maxRows	Number of results to be returned.	50
gameId	The unique gameId that the recommended games will be based on	
useGlobal	Base searches without locale parameter.	true

**Usage example:**

- Get recommended games for gameId megaMoolah@mg :  
/pi/games/recommended.json?brand=unibet&jurisdiction=SE&deviceGroup=desktop&maxRows=20&gameId=megaMoolah%40mg&useGlobal=true

## POKER

### Rest API

- `/pi/games/poker/tournaments/upcoming.{responseformat}`

Lists all upcoming poker tournaments. Also includes in progress tournaments that are still available for late registration

Parameters	Description	Usage Examples
app_id	Identifier of the application. This is a ID of 8-character which is received by registering to Kindred developer portal.	xxxxxxxx
app_key	Shared secret of the application. This is a 32-character key which is received by registering to Kindred developer portal.	xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx xxxxxxxx
responseformat	Response format type. Supported responseformats are xml and json. Select the required responseformat from the dropdown.	json

#### Usage example:

- Get all upcoming poker tournaments: `/pi/games/poker/tournaments/upcoming.json`
