

Extend the reach of your talent management suite

Improve efficiency, usability and more with MicroApps

What is a MicroApp?

A MicroApp is an application designed and built to extend the out-of-the-box functionality available in your Learning Management System (LMS) or other talent management software. MicroApps can funnel your data from various sources and integrate with your LMS to improve processes that are not quite as robust on their own, take available data and present it differently, or enable users to complete a task in a way not available through existing workflows. In short, MicroApps let you do the things you wish your software did but doesn't.

How do you implement a MicroApp?

Educe will work with you to identify specific business needs and pain points that cannot be addressed through standard configuration, then identify MicroApp options to fill the gap. As a MicroApp is cloud-based, you will pay a subscription fee aligned with the term of your talent management software subscription. Fees range based on complexity and encompass all costs, including design, development, validation, and ongoing hosting and support. Best of all – you will not have any new costs when your software has a new release as Educe takes care of “future-proofing” the seamless integration of the MicroApp with the rest of your platform.

Three Ways You Can Leverage MicroApps

Facilitate communication between employees

Pull in data from your social networking application (think Yammer, Jostle) and embed it into your LMS, utilizing one seamless platform to connect with employees across your organization.

Improve work flow processes

Develop a questionnaire that users can complete within the LMS. The responses will be updated in users' records, making it simpler for HR to assign specific training courses to individuals when required data does not exist in the HRIS.

Identify user activity and make recommendations

Create a custom, searchable view of a user's transcript directly in your LMS. This can provide a comprehensive look at activity data including how many hours of training each user has left to complete.

About Educe

Educe helps organizations implement talent management technologies that enable people to reach their potential. By focusing on implementation and adoption of systems that enable the development of people, we have grown specialized expertise that allows us to provide solutions that are relevant and sustainable. Clients call upon Educe to leverage our depth of product knowledge, proficiency in industry best practices, and strong record of client satisfaction.
