

Subject: MCR-10061, Remove trailing null in gtss_verify_access_.pl1

Author: Eric Swenson

Date: May 25, 2019

Problem Description

The source segment gtss_verify_access_.pl1, in the source archive >ldd>unb>s>bound_gcos_tss_.l.s.archive has a trailing NUL character. This presumably resulted from restoring this segment from a tape made on MIT or ACTC, which sustained errors in the conversion to a tape image readable by the dps8m emulator. This segment was not on the original MR12.5 tapes, but added from ACTCs dump tape.

Ticket <http://multics-trac.swenson.org/ticket/125> describes this issue.

Proposed Changes

Remove the trailing NUL (\000) character.

A comparison of the installed version and the updated version follows:

```
cpa [lpn gtss_verify_access_.pl1] ==  
  
A380          end;\000Changed by B to:  
B380          end;  
  
Comparison finished: 1 difference, 2 lines.  
r 15:45 1.092 18
```

Documentation

No documentation is required.

Testing

No testing required.
