Top 7 Subwoofer Computer Speakers

For many people, computers have evolved past the point of being an internet browsing unit, or a platform for work. They have become entertainment centers that are more powerful than many television or stereo units. Speaker systems can thus help upgrade customer's overall computer system. [Subwoofers](#) are incredibly important because they provide the highest degree of wow factor. Proper bass amplification can only be heard on a speaker unit with a good subwoofer. Cheaper speakers will produce bass sounds that rattle or translate into dissonant tones. Klipsch, GOgroove, Logitech, HP, and Edifier are some manufacturers who produce quality subwoofer computer speakers that can be found at specialty stores or online retailers, like [eBay](#). By exploring the variations in these models, shoppers will be able to determine the best speaker that fits their needs.

Klipsch ProMedia Computer Speaker System

The [Klipsch ProMedia Computer Speaker System](#) is a favorite among buyers. It has high ratings across the board, due in large part to full-bodied 130-watt subwoofer. It is a three piece system that comes with two 35-watt speakers, in addition to the subwoofer. Along with an easy set up, the speakers produce a tight bass sound and clear highs, along with a full-bodied mid range. Not only that, but it is THX certified. That means a higher performance level, and an overall confidence in their product.

GOgroove BlueSYNC LX Bluetooth Wireless

With its wireless features, powered by Bluetooth, the GOgroove BlueSYNC LX Bluetooth Wireless speaker system is a great purchase for home offices. It has a thirty foot wireless audio range, meaning that it can be powered up to thirty feet from a computer system. This is a great option for those with already crowded desk areas, wanting a full sound that built-in computer speakers do not provide. It has a remote, making it an even more versatile system. With its lower price point, and good bass sound, it makes for a great system.

Logitech Audiohub

These wrap around speakers are great for those who use their laptop in a stationary environment. The [Logitech Audiohub](#) speaker system is built to wrap around a laptop, as one single unit, while still providing speakers and a subwoofer. In addition, it has additional USB inputs that many people find to be an added perk. Even at low volume, the sound is clear and the bass is not overpowering.

Logitech X-540 5.1

Gamers take note, this system provides full surround sound that allows players to hear the first footfalls of their enemies coming up on them. The [Logitech X-540 5.1](#) speaker system is a great choice for not just game enthusiasts, but also people who want a movie theatre sound

in their own living room. The rich bass projects from the bottom of the subwoofer allowing the sound to be evenly distributed throughout the room, and with the bass equalization, there is no distortion at all.

HP 2.1 Compact Speaker System

For an economical option, the [HP 2.1 Compact Speaker System](#) is excellent. With a low list price, they are significantly less expensive than other speaker systems, while still providing quality sound. With easy set up, this compact system is an ideal desk speaker system. These speakers are mini, so they are not advisable for a house party, but for those looking for a desktop speaker with subwoofer, they are great.

Edifier USA M1360

The [Edifier USA M1360](#) speaker system is another great budget option for customers. With its angled satellite speakers and downturned subwoofer, the sound has been described by customers as fantastic. It does not have a regulator for the subwoofer, which could be a negative for customers; however, it has been set up at an optimal level and many programs allow for bass regulation.

Logitech Z-4 2.1 Speaker

The [Logitech Z-4 2.1](#) speakers are a wonderful surprise for many people not expecting a small set to carry much volume. These speakers retail for just under \$50, putting them in the economical range. The subwoofer delivers a deep bass with sound angled towards the floor so that sound does not bounce off the walls. In addition, the satellite speakers have 25 watts, a great value for its price point. All in all, this unit is a favorite of many.

Subwoofer Computer Speaker Accessories

Not all speaker systems come with remote controls. Since they are so convenient, purchasing one can be beneficial. Many people find they enjoy the subwoofer in a budget friendly model, but that the [satellite speakers](#) do not have adequate power. In those cases, many people opt to purchase additional speakers and find that their system, bought separately has the power of an expensive set of speakers, at a much lower cost.

How to Buy Subwoofer Computer Speakers

Buying a set of subwoofer computer speakers on eBay can be worlds apart from searching in stores. On [eBay](#), products from different vendors are set side by side for easy comparison. Oftentimes, this results in spending less time to find an item that matches your needs at a better price. Buyers should be sure to read item descriptions and shipping details carefully before committing to buy. Seller feedback can be important in determining what your experience would be with them. Buying a subwoofer system for your computer can alter your listening experience and turn your old computer into a brand new device in your eyes.
