

Huawei Mediapad 7 Vogue vs. Razer Edge Pro

Choosing the right tablet for individuals can be difficult. With the recent saturation of tablets on the market, selecting a tablet that fits the need of the individual is key. Both the [Huawei Mediapad 7 Vogue](#) and the [Razer Edge Pro](#) are excellent choices for those looking for tablets with high functioning, capabilities, and easy navigation. However, there are certain aspects that may make one a better choice than the other. Both of these tablets can be found at electronic retailers and online retailers, like eBay. By learning about the key features of both the Huawei Mediapad 7 Vogue and the Razer Edge Pro, as well as comparing their functions, customers can make an informed decision before committing to purchase.

Huawei Mediapad 7 Vogue

The [Huawei Mediapad 7 Vogue](#) is a multi-functional tablet designed for fashionable, young people. It is just over 7 inches in height and meant to be used both as a tablet, and as a cell phone. With its lower price point, it is especially appealing to younger individuals. It comes in around \$299, which may seem on the higher end for a tablet, but with its cellular network capabilities, the price point puts this all-in-one device in a lower market range. However, the size of the display can be off putting for many people wanting to use it as both a cell phone and a tablet. It has been criticized as being too bulky for hand held cell phone use. The four core processor and 1.2 GHz processor ensure that it runs smoothly. The aluminum bodies are sturdy and of a .4 inch thickness, which is not ultra-light. The resolution is good at 1025 x 600, and actually has a higher pixel density than the Apple iPad Mini, a leading tablet. There are front and rear cameras, but only 8GB of built in storage, with the option of microSD storage.

Razer Edge Pro

The [Razer Edge Pro](#) targets a different market, the gaming market. Identified as "the most powerful tablet in the world," it is made for people to be able to play high resolution games that require a decent amount of processing power. With its Windows operating system, the Razer Edge Pro is compatible with all PC gaming programs and applications. The Windows 8 interface gives customers the ability to have access to any game in their extensive library. Rather than being reliable on apps, the system can perform using anything that is available through a PC, such as Netflix, Hulu, Skype, and Spotify. The four modes allow for the Razer Edge Pro to be a versatile device. The tablet mode performs using primarily touch screen navigation, while the keyboard mode gives the gamer access to a full keyboard. The mobile console mode is ergonomically smart, by placing the controllers at either side of the display where users would hold the device. Lastly, the home console display is a docking mode that can be especially useful when charging and watching movies or television.

Comparing the Huawei Mediapad 7 Vogue vs. Razer Edge Pro

Both the Huawei Mediapad 7 Vogue and the Razer Edge Pro are vastly different tools in both their intended uses and their markets. While the Huawei Mediapad 7 Vogue is marketed to budget-minded young people who are interested in having all of their social media

functioning, including phone, in one place, the Razer Edge Pro is marketed as the ultimate gaming device. Though both devices have access to social networking, like Facebook, and the ability to play high resolution games, each is much better for one than the other.

Ideally, the Razer Edge Pro customers are people who are interested in having a gaming device that can handle everything that their programs require. It is a higher speed device, with a 1.9 GHz processor and a Windows 8 operating system. It appeals to people already comfortable with that system, who are looking for a versatile and portable gaming tablet. The Huawei Mediapad 7 Vogue runs on an Android 4.1, which is not nearly as fast as the Razer Edge Pro's operating system. However, those opting for the Mediapad 7 Vogue may not need all of that power, especially if they are only making phone calls, texting, browsing the internet, and watching television shows.

Huawei does not have the name brand recognition that the Razer Edge Pro enjoys with the attachment of the Windows operating system. It is a lower performance choice compared to many other tablets that are selling the same features. However, it is trying to set itself apart by offering a 2G or 3G network, depending on the model and cell phone carrier. The Razer Edge Pro is the first of its kind, a sophisticated gaming tablet. However, its high price tag, between \$1,299 and \$1,449, and short battery life make it less appealing. For the right shopper, however, each of these tablets could be exactly what that person is looking for.

Buying on eBay

[eBay](#) allows customers like yourself the ability to compare prices of retailers from around the world. Oftentimes, customers can find better deals through eBay than by browsing their local electronic stores. You can choose to search, browse, or a combination of both options when looking for items on eBay. By changing keywords to be more broad or limited, customers can better find what they are looking for. Using synonyms can also be helpful in finding what you are looking for. For example, searching for [Huawei Mediapad 7](#) may yield a lower number of results than [Mediapad 7](#) or [Huawei Mediapad](#). Read each description carefully and contact sellers with any questions to ensure that you are getting exactly what you want.
