

Lenovo Ideatab a3000 vs. Samsung Galaxy Note 8

When searching for the right tablet, there are many options. This can be both a blessing and a curse. However, with a bit of direction, choosing the right tablet can be fun. Many people enjoy tablets for their gaming abilities, while others just want a device to navigate the internet. Tablets can be used to watch streaming movies or television shows, read ebooks, and access apps like Pinterest and Twitter. Customers using a subjective viewpoint to determine what tablet works best for the particular customer are often the most happy with their purchase. By outlining and comparing two popular tablets, the Lenovo Ideatab a3000 and Samsung Galaxy Note customers are able to determine what device is the best choice.

Lenovo Ideatab a3000

The [Lenovo Ideatab a3000](#) has been noted by reviewers as being a good, basic, starter tablet. It does not have all of the bells and whistles as more expensive tablets, like the Apple iPad, but it is at a great price point. This tablet retails at \$179, and does many of the most common functions that people use tablets for. People can read eBooks, watch streaming movies, and play games. It runs on an Android 4.2 operating system. The processing speed is not as fast as some other tablets at 1.2 GHz, but it does retail at such a low price. This is not an ideal tablet for gamers, unless they are playing Candy Crush or Angry Birds. It has a decent 1024x600 pixel 7 inch display, and seven hours of battery life when browsing the internet. The front and back access cameras allow for users to both video chat and take pictures.

Samsung Galaxy Note 8

The [Samsung Galaxy Note 8](#) is a popular favorite of people who are interested in more than a basic tablet. It runs on the Android Jelly Bean 4.1 and has 2GB of memory, so multitasking with playing games, surfing the internet, and reading is effortless. The screen is phenomenal, with 1280 x 800 pixels and an eight inch display. This tablet has one of the best battery lifes on the market, lasting for up to 14 hours. The tablet comes with an S Pen. According to customer reviews, the S pen understands written script much better than devices nearly three times the cost. Hovering over files with the S Pen allows for people to see what is inside. Users can even read eBooks in a mode that looks just like paper. This is especially helpful in environments where screens are not ideal, like in the sunshine. The Wifi Channel Bonding allows for the GPS to function exquisitely en route to various locations. S Note and S Planner programs help people stay organized and allows for professionals to create presentations.

Comparing the Lenovo Ideatab a3000 vs. Samsung Galaxy Note 8

In terms of comparison, the Lenovo Ideatab a3000 and Samsung Galaxy Note 8 are world's apart. While they both allow for the most basic and common uses for tablets, the Samsung Galaxy Note 8 excels in processing power and programs. However, the Galaxy Note 8 is over

twice the price. For people who are only intending on using the tablet for basic browsing, purchasing an expensive device with a lot of power is pointless.

Many professionals prefer a more heavy duty device, like the Samsung Galaxy Note 8 because it has the capability to help people with becoming organized by using their calendar and note programs. Not only that, but these professionals can create presentations that are converted to PDF format and presented on any computer. For people who want to play more complex games, the Samsung Galaxy Note 8 is a better choice, since it has a faster processor. However, the majority of casual users enjoy playing games with less demanding interfaces, and these programs can be played exactly the same on either the Lenovo Ideatab a3000 or the Samsung Galaxy Note 8.

Both tablets are rated high by users. They are both quality machines, but have entirely different audiences. They are both produced by recognized manufacturers, using operating systems that are tried and true. While the Ideatab a3000 and the Galaxy Note 8 have the same exact operating system, the Android 4.2 Jelly Bean, the Galaxy has more RAM and can multitask better. A stylus pen can be purchased for the Ideatab a3000, but will not have all of the same features as the S Pen. For many, having the option for the screen to be viewable like a sheet of paper, in Reading Mode, is very attractive. Reading on a tablet screen in the sun that is not on Reading Mode is nearly impossible.

Buying on eBay

Buying on [eBay](#) can be a great experience for customers, because they can search through items from so many different vendors, more than would be represented in one town or city. Shoppers should be sure to read the listing carefully before committing to buy any product. They should ask sellers any questions that they may have prior to purchase. Using synonyms can be helpful, too. While a certain amount of results will display with the keywords "[Samsung Galaxy Note 8](#)," more will show with "[Samsung Tablet](#)." Be sure to search using the category navigation, search bar, or a combination of the two. Buying on eBay is a fun experience, and a reward after deciding what product is right for you.
