

If the holidays were hard on your wallet, **energySMART**,
a **Nicor Gas program**, can help you save in the new year.

Take control of the way you use energy

and find lots of savings
around your home with a
DIY energy assessment.

energySMART 
A Nicor Gas program

energySMART has developed easy DIY energy assessments to help you find ways you can **save energy** in your home.

Tip #1

Check your roof.

Big icicles might mean you need more insulation to prevent heat loss in your attic.

Tip #2

Look in the basement.

Make sure the top of your foundation wall is fully sealed to prevent air leakage.

Tip #3

Inspect your walls and floors.

Cold spots in a room or dark areas on the wall might mean low insulation and lost air and energy.
