

OPHTHALMOLOGY

Medical School: Albert Einstein College of Medicine

Associations: American Board of Ophthalmology, American Academy of Ophthalmology, American Society of Retina Specialists

Dr. Robert Raden is focused on keeping his patients' eyes healthy for the long haul.

Board-certified by the American Academy of Ophthalmology and a member of the American Society of Retina Specialists, Dr. Raden works with patients to develop treatments for retinal and macular diseases, including macular degeneration, diabetic retinopathy, vein occlusions and flashes and floaters.

These eye ailments require a special plan of action – it's not just one and done.

"As a retina specialist, I have very long-term relationships with my patients," says Dr. Raden. "It's not typically a onetime appointment that fixes the problem, like getting fitted for glasses. People may need an appointment every few months or more to maintain their vision. This is long-term care."

Patients who are diagnosed with these potentially serious diseases trust Dr. Raden to work with them to achieve eye health.

"One in three people over age 70 have some form of macular degeneration," says Dr. Raden. "The changes can happen slowly or have a sudden onset. It's very important that people who have any change in their vision come in and get checked. Don't wait for it to go away on its own. That's when more damage can occur."

The Retina Center of South Florida is just the place to go. With the latest state-of-the-art equipment, Dr. Raden can diagnose and treat anything that's happening in the back of those baby blues. Patients know that he is committed to providing expert medical care in a comfortable and relaxed atmosphere.

"When something is going on with your vision, it can be very scary," he says. "That's why I take the time to personally explain to the patient their diagnosis so they completely understand their treatment. While retinal and macular disease may not always have a cure, we now have excellent treatments. With mutual trust and confidence, we can restore, preserve and usually improve vision."
