Healthcare professionals often face an impossible task: balancing time, patient volume, and excellent care without sacrificing quality of service. Many HCPs wish for an efficient, reliable way to explain complicated conditions and treatments to patients and families.

Practicing cardiologists developed CardioVisual – an educational cardiovascular health app – precisely for those HCPs and their patients, with two goals in mind:

1. Saving HCPs time & 2. Engaging patients with reliable information.

 The image shows the CardioVisual app interface on a smartphone and a tablet. The smartphone screen displays a grid of icons for "Heart", "Rhythm", "Structure", "Circulation", "Heart Health", and "Favorites". The tablet screen shows a detailed view of a "Cardiac CONDITION" section, including "Myocardial infarction MI" and "TREATMENT" options like "Transcatheter Cardiovascular Interventions (TAVI)".

 **CardioVisual®**

Created for healthcare professionals and patients, CV informs users with brief, easy-to-understand videos about all aspects of heart health, including:

- Prevention
- Risk factors
- Conditions
- Treatments
- Devices for managing cardiovascular diseases

Our aim is to simplify discussions, better inform patients. and save healthcare professionals time so
