Chrome history view free

History Viewer 5.1 which new View done on your computer Many of us need to share their computers. Therefore, the need to see what happened on the computer while you were away is an undeniable fact. If you need a handy software that can help you see what was done on your computer while you were away, then it's time to try History Viewer. History Viewer is a handy, powerful and efficient tool that helps you easily view the history of everything done on your computer. History Viewer is an easy to use tool that helps you see what other users have done on your computer, including visited websites, opened files, viewed movies or images, and so on. This amazing piece of software allows you to easily view Windows-specific tracks, such as the recent documents, the search history and running history, the open/save history, the last visit history and, especially for Windows 7, the First Folder and Typed Paths history. In addition, History Viewer lets you see the entire history stored by different web browsers such as: Internet Explorer (URL history, address bar, cookies, and index.dat files), Mozilla Firefox (URL history, downloads, and cookies) and Google Chrome (URL history, cookies, and downloads). You can also open and view the saved links directly from this program, just by double clicking it. You can also save the history report to a single HTML file for late review, you can view the reports with Internet browsers like IE, Firefox, and Chrome. Etc. See report example Client Testimonials The most important is: it is completely freeware! Windows 98/ME/NT/2000/XP/Vista/Windows 7/Windows 8 compatible Export your Chrome History as an Excel-readable CSV file or as a JSON file. All Chrome extensions are now automatically hidden under the puzzle piece at the top right. Click the puzzle then on Export Chrome History to use the extension. Version 1.0.1.0* Indicates that the Forever option is limited by Chrome's 3 month (90 day) browsing history memory. * Road the .csv minute and second time. For example, the time goes from 5:3:7 to 5:03:07 when viewed in plain text. Ви можете легко видалити та редагувати свою історію в браузері ChromeПростий менеджер історії Chrome, який зручний у користуванні та має простий інтерфейс користувача Google delete all history. [Windows 32 bit] C:\Program Files\SecurityXploded\ChromeHistoryManager[Windows 64 bit] C:\Program Files(x86)\SecurityXploded\ChromeHistoryManager Often, it might be a good idea to save your web browsing history before you delete it. We usually talk about cleaning up our browser history so that it doesn't fall prey to snoops, but it can also be a good idea to save your history before you delete it. For example, you can use it to revisit previous pages or look over a child's browsing habits. Chrome gives you a way to save browsing history as an HTML file, but nothing more. Fortunately, there's a free portable tool that opens up a few more options than that. How to Run Chrome Browsing History ChromeHistoryView is a small and free portable tool from Nirsoft that enables you to do more with your Chrome History. You don't have to do much except download the 180KB ZIP file and export it from any folder. The utility reads the history data file of Google Chrome browser and display it a neat grid. Download: ChromeHistoryView (Free) Here are some key features: The data is displayed under URL, Title, Visit Date/Time, number of visits, number of times the address has been typed (Typed Count), Referrer, and Visit ID. Select any number of rows or the entire dataset and export them as a text file, CSV file, tab-limited text file, XML file, or HTML file. You can also copy the paged information into Excel and take it through its powerful filters. The Advanced Options (F9) allows you to select a different Chrome user profile or select the browsing history for Chrome-based browsers like Vivaldi, Opera, and Yandex. Filter the AURLs by any date or time range. Supports command-line commands. ChromeHistoryView is a complete utility that not only helps you back up your Chrome browsing data, but also dives into it for closer look. For more export, see how to back up your Chrome bookmarks. Microsoft U-Turns over Xbox Live Gold Price Hike The Xbox creator confirmed that pricing for Xbox Live Gold won't change. Related Topics Internet Windows Google Chrome Browse History Shortly Over author Saikat Basu (Published 1539 Articles) More from Saikat Basu BrowseHistoryView v2.46 - View browsing history of your web browsers Copyright (c) 2 012 - 2021 Nir Sofer ChromeCacheView - Cache viewer for Google Chrome Web Browser BrowsingHistoryView is a utility that reads the history data of different web browsers (Mozilla Firefox, Google Chrome, Internet Explorer, Microsoft Edge, Opera) and display the browsing history of all these web browsers in one table. The browsing history table includes the following information: Visited URL, title, visitation time, visit count, web browser, and user profile. BrowseHistoryView allows you to view the browsing history of all user profiles in a running system, as well as get the browsing history of external hard drive. You can also perform browsing history in csv/tab-delimited/html/xml file from the user interface, or from command line, without displaying any user interface. Version 2.46: Added support for Brave Web browser. Version 2.45: Added 'Display QR Code' option (Under the View menu): When turned on, QR code from the selected URL is displayed in the lower pane, and you can use QR code reader application on your Smartphone to open the URL immediately in the web browser of your Smartphone. Version 2.41: Fixed the /cfg command-line option to load .cfg file from the current directory if full path is not specified. Version 2.40: Added new date/time filtering: 'Load history items from the following time range and date range (separate)'. For example... You can search browsing history items that their modified date is between 01/01/2019 - 01/01/2020 and their modified time is between 02:00 - 04:00. 2.36: Added button on the toolbar to remove Chrome // history records. Version 2.35: Added 'Remove selected history records' option (Ctrl+ Delete), which allows you to remove individual history records from Chrome and Firefox Web browsers (including web browsers that use the same history database of Chrome/Firefox, such as Waterfox, SeaMonkey, Vivaldi, and so on...) Other web browsers are not supported. Version 2.30: Added new columns: 'History file' and 'Record ID'. Version 2.26: Added 'Double-Click Action' option, which allows you to choose what to do when you double-click history item - Open properties window or open the URL in Web Browser. Version 2.25: Added support for Waterfox Web Browser. Version 2.21: Added option to specify the time range in local time (Instead of GMT). Version 2.20: BrowseHistoryView now automatically detects the Chromium-based Edge Web browser. Version 2.17: You can now specify environment variables in the history files of the 'Load history from the specified history files' option. Version 2.16: Fixed to work with Firefox 61.0 Version 2.15: Added support for Pale Moon Web browser. Version 2.12: Added new options to the 'Quick Filter' feature. Version 2.11: The remote computer name (Load history from remote computer's option) is now stored in .cfg website. You can also set the remote computer from command line with /ComputerName command-line option. Version 2.10: Added new option: 'Automatically stop the caching task of IE10/IE11/Edge for unlocking the database file'. If this option is turned on - BrowseHistoryView automatically stops the 'CacheTask' Scheduled task to unlock the database file from IE10/IE11/Edge (WebCacheV01.dat). When you use the 'Load history of remote computer' option, BrowsingHistoryView will stop the 'CacheTask' Scheduled task on the remote computer, allowing you to remotely view the history of IE10/IE11/Edge. Version 2.05: Added 'Load history from remote computer' option in 'Advanced Options' window. Be aware that this option only works when you have full admin access to the remote computer. Also, the history of IE10/IE11 is only available before the user signs in on the system because after logging in to the history database of IE10/IE11 is closed. Fixed bug: 'Copy selected items' worked improperly when the 'Unicode/Ascii Save mode' was built up to 'Always UTF-8'. Version 2.00: Added 'Visit Type' column for Chrome and Firefox Web Browsers. (Turn on, Typed URL, Bookmark, and so on) Version 1.95: Added 'Quick Filter' feature (View -> Use Quick Filter or Ctrl+Q). When turned on, you can type a string in the text box added under the toolbar and BrowseHistoryView will immediately history table filter, which shows only lines that contain the string you typed. Version 1.91: Fix error: When using /SaveDirect command-line option, the file is always saved according to the default encoding, instead of using the selected encoding in Options -> Save file Version 1.90: Added support for Vivaldi Web Browser. When 'Load history from the specified profiles folder' option is selected, the folders combo-box is filled with the profiles folders stored in shaded copies of your hard drive. When you load history of shadow copies, you can find history items older than you can find in your current system. Version 1.87: Added secondary sorting support: You can now get a secondary sorting, by holding down the shift key while clicking the column header. Be aware that you only need to hold down the shift key when you click the second/third/fourth column. To sort the first column, you must not hold down the Shift key. Fixed bug: BrowseHistoryView crashed when using the find option while the last item was selected. Version 1.86: You can now select the desired encoding (ANSI, UTF-8, UTF-16) to store the csv/xml/text/html files. (Under the Options menu) Version 1.85: Add new option to the 'Advanced Options' window: Load only OWLs contains one of the specified strings (comma-delimited list). Added new option to the 'Advanced Options' window: Do not load APOs that contain one of the specified strings (comma-delimited list). Version 1.81: The 'Web Browser' column now displays 'Internet Explorer 10/11/Edge' for items from IE10/IE11/Edge (In earlier versions, it displayed 'Internet Explorer 10') Version 1.80: Added support for Yandex Web Browser. Version 1.77: The properties window is now larger and variable. Version 1.76: Added option to skip duplicate APUs that their visit time difference is less than xx seconds. (In 'Advanced Options' window) Sometimes a web browser can record a web page that is visited multiple times with a difference of a few seconds, even when the web page has only been visited once. This option allows you to hide these duplicate history records. Version 1.75: Added support for Microsoft Edge/Project Spartan (On Windows 10). Fixed issue: When Internet Explorer 10/11 was opened by multiple users, BrowsingHistoryView displayed all history records of IE 10/11 multiple times. Version 1.71: Fixed issue: When loading large amount of history items, some actions, such as selecting items and copying selected items to the Clipboard, were very slow. Version 1.70: Added 'Typed Count' column (Relevant to Chrome Web Browser Only). Version 1.69: Fixed problem: On some systems, BrowsingHistoryView could not read the history of IE10/IE11 from WebCacheV01.dat Version 1.68: BrowseHistoryView now detects the portable version of Firefox if it runs in the background. Version 1.67: Added 'URL Length' column. Version 1.66: Added 'Load history items from the last xx minutes' to the Options' window. Fixed bug: BrowseHistoryView could not remember the last size/position of the main window if it was not located in the primary monitor. Version 1.65: Added support for Opera (Version 15 or later). Version 1.60: Added Profile's column, which displays the directory name of the web browser profile (For Firefox and Chrome Web browsers). Version 1.55: Added 'Save configuration to file' and 'Load configuration of file' options. Version 1.52: Fixed error: When you have history information from a remote computer and both local computer and remote computer have IE10 or IE11, BrowsingHistoryView displays the IE10/IE11 history of the local computer... (Be aware that BrowseHistoryView cannot display the IE10/IE11 history of a remote computer, while the WebCacheV01.dat file is locked on the remote computer) Version 1.51: Fixed to find the correct item when you type the queue you want to search in the main list view. Version 1.50: Added 'Load history from the specified history files' option in the 'Advanced Options' window. Version 1.44: Fixed error from v1.43: BrowseHistoryView stopped working on Windows 2000. Version 1.43: Fixed date/time values by daylight saving time settings. Version 1.42: Added/cfg command-line option, which instructs BrowseHistoryView to use a config file in a location rather than the default confiscation file for example: BrowseHistoryView.exe /cfg %AppData%\%Browser%\BrowseHistoryView.cfg Version 1.41 Fixed an error displaying IDN URLs (URLs (URLs containing non-English characters) of Firefox history. Version 1.40 Added new data source in the 'Advanced Options' window: Loads history from the specified custom folders. In this option, you can select the correct AppData folder, Local AppData folder, and the History folder from the profile you want to inspect. Version 1.36 Fixed the problem with the 'Advanced Options' window on Windows 2000. Version 1.35 Added 'Show advanced options on start' option. You can turn off this option if you don't want the 'Advanced Options' window to appear on each time you run browsingHistoryView. Version 1.33 Improves the detection of AppData and Local AppData directories when reading the history of external drive. Version 1.32 Added secondary sorting: When you click the 'Web Browser' column header, the list is sorted by the 'Web Browser' column, and then by the 'Visit Time' column. Version 1.31 Added option to get the history of Internet Explorer API, instead of reading the file directly. (Only available when loading the history of the current user). Version 1.30 Added improved support for Internet Explorer 10, which works smoothly and does not need to run BrowsingHistoryView as an administrator. There is no need to run BrowsingHistoryView with any additional command-line option to read the closed file from IE10 (WebCacheV24.dat or WebCacheV01.dat), and the /UseVolumeShadowCopy command-line option added on v1.15 has been removed from this Be aware that during scrolling you can get corrupt history result, because the database is not fully flushed to disk. Also be aware BrowseHistoryView cannot read a closed IE10 file on a remote network system. Version 1.27 Fixed error: BrowseHistoryView failed to load Firefox profile located on a drive letter that is different from the drive letter where the Windows profiles (c:\users...) are located. Fixed the flickering appeared while rolling the history items. Version 1.26 Fixed error: When browser history data is run with /SaveDirect command-line option, BrowseHistoryView added bytes order marking of Unicode, while the file is stored as Ascii. Version 1.25 BrowseHistoryView now reads the history of all profiles of Chrome and Chrome Canary Web browsers. Version 1.21 Fixed error: BrowseHistoryView displays corrupted HOUR's of partially deleted records from Internet Explorer history file. Version 1.20 Added support for Chrome Canary and SeaMonkey Web browsers. Added 'Market Strange/Even Rows' option, under the View menu. When turned on, the strange and even rows are displayed in different color, to make it easier to read a single line. Version 1.16 Fixed error: BrowseHistoryView failed to read some of the history items from Internet Explorer 10. Version 1.15 Added support for Internet Explorer 10 (WebCacheV24.dat or WebCacheV01.dat). There are some restrictions and problems with this version of Internet Explorer. See the 'Internet Explorer 10 Support' section for more information. Version 1.10 Added 'Visit from' column (For Firefox and Chrome only), which displays the URL the user visited before the web page specified under the URL column. Version 1.06 Fixed BrowseHistoryView to display the webpage title for Internet Explorer web browser. Version 1.05 Added 'Copy URLs' option (Ctrl +U) Added 'Open URL in Web Browser' option. Version 1.01 BrowseHistoryView now reads the .ini Firefox to get the correct profile folders. Version 1.00 - First release. This utility works on any version of Windows, from Windows 2000, and up to Windows 10. Both 32-bit and x64 systems are supported. The following web browsers are supported: Internet Explorer (Version 4.00 and larger) Mozilla Firefox (Version 3.00 and larger) Microsoft Edge Google Chrome Safari Opera (Version 15 or later, which is based on Chrome Web Browser) 'Visitation Score' on Internet Explorer Web Browser: The 'Visit Count' column is taken as it is from the history file of Internet Explorer. Unfortunately, Internet Explorer tends to build up the 'Visit Count' number extremely, meaning you can't assume that the
