

Take a Closer Look at the P-Series Commercial Systems from Mitsubishi Electric Cooling and Heating Solutions.

Explore the Ultimate Value in Today's Commercial HVAC Market.

For more than 30 years, Mitsubishi Electric has been a leader in the United States in providing the most energy-efficient, environmentally friendly HVAC products for commercial use.

Mitsubishi Electric's advanced technologies include INVERTER-driven compressor systems which use only the exact amount of energy needed to cool or heat an area. This feature means your customers will save energy—and major costs—while experiencing precise control over their comfort year-round.

Zone Control plus Personal Control

Split ductless and ducted systems use refrigerant lines to connect outdoor units to indoor air handlers. The result of this benefit is that the capacity within any space with an indoor unit installed can be controlled to provide the perfect temperature. Along with this capability to provide precise temperature control for any space, our systems also offer the unique ability to condition only those spaces in current use at any given time.

Mitsubishi Electric's systems employ user-friendly wireless hand-held, wireless wall-mounted, or wired wall-mounted controllers. These options deliver precision control to provide pinpoint comfort very efficiently. Zone control coupled with personal control equals all-around energy savings.

State-of-the-Art Design and Smarter Functionality

When you choose Mitsubishi Electric P-Series products for your commercial and major residential applications, you're making an excellent choice that your customers will appreciate for its intelligent function and the true, year-round Eco-comfort it delivers.

Quality

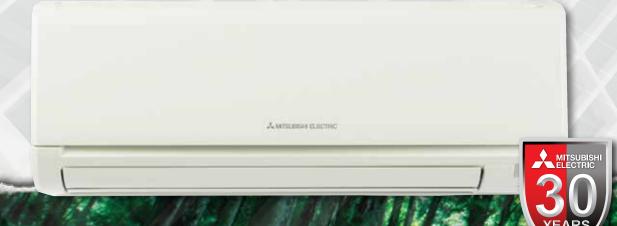

Mitsubishi Electric is consistently recognized by HVAC contractors as the #1 preferred HVAC ductless brand with the highest quality rating among manufacturers. Our products provide extraordinary service life extending years beyond the norm.

Performance

We deliver a complete range of compact and powerful cooling and heating products that are also intelligent, energy-efficient and quiet.

Training

We provide comprehensive product and applications instruction through our regional training centers across the United States.

Are Mitsubishi Electric P-Series Systems Truly Environmentally Friendly for Commercial Duty?

Count on Mitsubishi Electric to set the standard for making ecologically responsible systems that minimize the impact both on the environment and on your customer's carbon footprint.

The fact that up to 83% of our components are recyclable is just the beginning of our commitment. Mitsubishi Electric has more systems today that are ENERGY STAR certified than ever before. Local and state government plus utility companies may provide tax credits and rebate opportunities for energy-efficient systems. Check to see what is available in your area by visiting www.dsireusa.org.

Discover How State-of-the-Art Technology Drives Dependable High Performance in the P-Series

Meet your customers' needs with coolingonly (PUY) or combination heat pump (PUZ) models. Each is compatible with any of the P-Series indoor units. You and your clients benefit from a wide range of installation possibilities.

Every rugged outdoor unit is completely assembled, piped, wired, and test-run at the factory prior to shipment. The heavy-duty, commercial-grade cabinet is constructed of galvanized steel plate, finished with electrostatically applied, thermally fused acrylic or polyester powder coating for superb corrosion protection. The front fan grille is tough, high-impact ABS plastic.

Highly efficient Mitsubishi Electric INVERTER-driven compressors for models

Quality construction in every Mitsubishi Electric P-Series unit sets the standard for all HVAC brands in North America.

Feature	Benefit
INVERTER Technology	Maximum energy-efficiency, precise temperature control, more consistent comfort in every space
Indoor unit powered by outdoor unit	Separate power supply not needed
Rugged housing, tough cabinet finish, strong welds at numerous stress points	Durability for years of reliable service
Durable, aerodynamic fan design	Super-quiet operation at all speeds
Quiet cooling operation down to 0° F*	High performance for all climates, south to north, east to west
L-shape condenser coil features copper tubing and aluminum fins	Greatly reduced debris accumulation that allows maximum airflow
Cabinet mounting and construction are designed to withstand 155 MPH winds	Peace of mind for customers in tornado/ hurricane-prone areas
Easy interior access to every P-Series indoor and outdoor unit	More efficient and less costly routine maintenance and servicing

^{*} With optional wind baffle added

PUY/Z (A18/24/30/36) and PUY (A12) are DC twin-rotor type. The compressor for model PUY/Z (A42) is a MItsubishi Electric Frame Compliant Scroll compressor. All compressors offer high performance due to advanced variable-speed INVERTER-drive technology, which varies the compressor speed dynamically to adapt continuously to the room load. Excellent efficiency and significant energy savings are the result.

Electronic linear expansion valves are employed to meter precisely and provide fine control to adapt the refrigerant flow continuously, ensuring exact capacity delivery. Mitsubishi P-Series outdoor models also utilize advanced Pulse Amplitude Modulation (PAM) circuitry. PAM adjusts the form of the current output wave to emulate the form of the supply voltage wave. These technological features offer the advantage that 98 percent of input power is utilized.

PUY/PUZ-NHA4/5

Cooling-only and Heat Pump

12,000 to 18,000 Btu/h

24,000 to 36,000 Btu/h

PUZ-HA**NHA4 (H2i®)

Hyper-Heating INVERTER

30,000 to 36,000 Btu/h

Mitsubishi Electric | System Technologies

Housed in the outdoor unit, the Mitsubishi Electric INVERTER-driven compressor responds to advanced sensor technology to detect subtle changes in temperature. Like a car's cruise control, the sensors automatically adjust the compressor speed to adjust system output perfectly. INVERTER-driven compressors dramatically reduce the system's energy use, unlike conventional units that run only at one speed, resulting in an endless wasteful cycle of starting and stopping.

Flexible Control

User-friendly and efficient zone control gives your customers the option to cool or heat only those spaces which are occupied. The controller does not even have to be

in the space shared with the indoor unit. Among Wireless Technology the energy-saving features of the controller are a weekly timer, temperature range limiting, auto-off, fault code notification, and service-call number display. Remote control via the internet from your Smart Device is available using RedLINK Technology

Easy-care Filters

Convenient tabs make it easy for anyone to remove the washable filters quickly for faster cleaning in the PKA, PCA, and PLA indoor units. Your customers will also save time and

money because they won't need to replace the filters. PEA/ PEAD models offer optional FB Series filter boxes for easy access and service.

Auto Cooling/Heating Changeover

When set to auto mode, P-Series systems continuously monitor indoor air temperatures, sensing when a space needs cooling or heating. The units automatically switch operation as needed to maintain a consistent level of comfort.

Bring in Outside Air

You will be able to install ducting with minimal on-site work to bring in outside air for PCA, PLA, and PEA/PEAD indoor units. A healthy, comfortable indoor environment is the result. Lossnay™ Energy Recovery Ventilators (ERVs) with integrated controls are also available. Outside air ventilation systems, ducting, and controls are provided separately.

Low Ambient Cooling

The P-Series provides exceptional low ambient performance.

For those applications requiring cooling performance during low ambient outdoor weather conditions, the P-Series, coolingonly and heat pump versions provide full capacity down to 23 °F and down to 0 °F with the addition to a wind baffle on the outdoor unit. Operation continues down to -18 °F with reduced capacity.

INVERTER Compressor

Shown inside insulated compartment

Mitsubishi Electric | System Technologies

In Mitsubishi's P-Series, Four Types of High-Performance Indoor Models Let You Match with a Versatile Lineup of Efficient, INVERTER-driven Outdoor Units to Provide a Truly Custom Solution.

P-SERIES INDOOR UNITS:

PKA Wall-mounted Air Conditioners and Heat Pumps

12,000-34,200 Btu/h

- Sleek, slim-line design
- **Ductless installation**
- Enabled for wall-mounted wireless, hand-held wireless or wired controller
 - Receiver for PAR-FL32MAA hand held, wireless, IR remote controller is built in as a standard feature on all PKA indoor units.
- Easy-clean, washable filter
- Ideal for spaces such as churches, classrooms, daycare centers, out buildings, small offices, server rooms and more

PLA Ceiling-recessed Air Conditioners and Heat Pumps

12,000-42,000 Btu/h

- Space-efficient ductless installation
- Built-in condensate lift mechanism
- Knockouts for ventilation air and branch duct run
- Optional i-see Sensor[™] for precise temperature control
- Easy-clean, washable filter (optional high-efficiency filter available-requires multifunction casement)
- Enabled for wall-mounted wireless, hand-held wireless or wired controller
- Ideal for intermediate retail shops, classrooms, office spaces, conference centers, building lobbies, and more

PCA Ceiling-suspended Air Conditioners and Heat Pumps

24,000-42,000 Btu/h

- Slim, powerful indoor unit design
- **Ductless installation**
- Knockout for ventilation air
- Optional i-see Sensor[™] for precise temperature control
- Enabled for wall-mounted wireless, hand-held wireless or wired controller
- Easy-clean, washable filter
- Suspends from ceiling for quick and easy installation
- Ideal for larger retail stores, classrooms, restaurants, office spaces, building entrances, plus energy-efficient additions, renovations, and more

PEA/PEAD Horizontal-ducted Air Conditioners and Heat Pumps

12,000-42,000 Btu/h

- Unobtrusive concealed ceiling design for short-run ductwork
- Built-in condensate lift mechanism
- Automatic fan speed control
- Enabled for wall-mounted wireless hand-held, wireless or wired controller
- Optional FB Series filter boxes for easy access and service
- Ideal in retail shopping centers, larger classrooms, auditoriums, office complexes, conference ballrooms, fitness centers, and more

Mitsubishi Electric

System Technologies

Ultimate Comfort Meets Ultimate Convenience

Select from a wired wall-mounted, wireless wall-mounted, or hand-held wireless controller for ultimate comfort control. With the handheld wireless remote controller the set-temperature display is large and easy to read. Using the 24-hour timer, you can set the unit operation to start and stop at specified times. The convenient remote provides easy control of the fan speed as well as the Cool, Heat, Auto, and Dry modes from anywhere in the room. The wall mounted wireless remote controller can be connected to the internet via a Gateway allowing for control of the P-Series System from a smart device or computer from any location with internet access. The hand-held wireless remote controller for P-Series systems is easier to use than most TV remotes.

Lightweight, Easy-to-install Indoor Unit

The smallest PKA unit measures about 36" wide, 11-1/2" tall, and 9-3/4" deep. It weighs just 29 lbs., is easily installed above windows or doorways, and can typically be installed by just two licensed installers in about a half day. The wall-mounted models don't require duct work, only a small three-inch opening in the wall or ceiling so they can be installed in some of the toughest spaces, even on brick and masonry walls.

Control Airflow Angle for Better Coverage

During operation the vane can be adjusted with the remote controller, to the perfect position to direct the airflow horizontally in cooling mode or towards the floor in heating mode, keeping room temperature even and comfortable. A simple press of the OFF button results in the vane closing the air outlet for a clean presentation when not in use.

Auto Vane Control

With the wired remote controller four different airflow positions can be set. The AUTO vane feature, when in use during cooling, permits the angle to self-adjust into a horizontal position and circulate cold air more effectively. During heating, the vane directs the hot air downward toward the floor where it will rise and circulate, keeping your room comfortable from top to bottom. The vane closes completely when not in use.

Mitsubishi Electric System Technologies

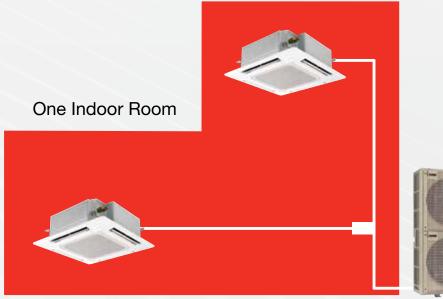

i-see Sensor™ Optional Accessory

temperature coverage.

X 1-see Sensor

In addition to the return air temperature sensor, the PLA-A**BA four-way ceiling cassette with the field-installed i-see Sensor™ measures the floor temperature in real time, observing the room vertically for better management of sensible temperature (temperature felt by the occupant). The i-see Sensor™ measures the infrared rays generated from the surrounding wall and floor surface at an angle of 360°. The infrared ray energy is converted into a temperature value. The i-see Sensor™ rotates 90° slowly in five-second intervals for correct measurement of temperature to cover the full floor space. When combined with the auto fan speed mode, air can be directed to the farthest corners of the room for enhanced

Outdoor Unit

Two-in-one Twinning

If you have a large space, such as a long room or hallway which would be considered one zone, two indoor units can be connected to one outdoor unit to cool or heat the space, providing the maximum amount of comfort. The process in which two indoor units act as one to spread the outdoor unit's capacity over a large area is called twinning.

Twinning applies to the PUY/Z-A24, A36, and HA36 outdoor units ONLY. The two indoor units must be the same capacity but do not need to be the same type -- they can be the same as 2 X PLA or different as 1 X PKA and 1 X PLA - as long as the capacities are the same. Piping limitations are: for the PUY/Z-A24 & A36 maximum combined total is 165 ft and for the PUX-HA36 maximum combined limit is 245 ft. Vertical difference between the two IDUs must not exceed 3 ft. Twinning also requires the use of one PAR-31MA controller -- it will control both indoor units and must be located in the conditioned space.

Mitsubishi Electric System Technologies PEA/PEAD horizontal ducted series

Built-in Drain Lift Mechanism

The PEA indoor unit features a built-in drain lift mechanism that lifts condensation up to 21-11/16 inches above the drain pan for the PEA and up to 27-9/16 inches for the PEAD indoor unit. The unit's fail-safe mechanism recognizes when there is a high liquid level in the condensate pan and shuts off the indoor fan and the outdoor unit compressor to prevent overflow.

When installed, the PEA/PEAD indoor unit utilizes short duct runs, allowing for the air conditioning of adjacent spaces or extending the range of distributed capacities within a single zone with very little visual impact to the conditioned area.

With features like a built-in condensate lift mechanism, adjustable static pressure, multiple fan speeds, DRY Mode, and an operating sound as low as 23 dB(A), the PEA/PEAD systems expand the number of application possibilities.

The Ducted air handlers come set up for rear return. The PEAD is convertible from rear to bottom return by relocating a cover plate. The PEA is convertible by using a BRP bottom return plate accessory.

Mitsubishi Electric P-Series H2i™ Light Commercial Solutions

It's below freezing outside? No sweat. The P-Series Hyper-Heating INVERTER systems work to provide the perfect temperature inside. It's all possible thanks to our responsive INVERTER compressor and patented flash injection technology. Even at 0° F, air-conditioning is possible with our wind baffle accessory. These light commercial zone solutions are perfect for any business, place of worship or school in any region of the country.

80% Hyper-Heating performance down to -13° F outdoor ambient.

- 100% heating capacity at 5° F outdoor ambient.
- PUZ-HA30NHA4: 18,000 30,000 Btu/h cooling / 18,000 34,000 Btu/h heating.
- PUZ-HA36NHA4: 18,000 34,200 Btu/h cooling / 18,000 40,000 Btu/h heating.
- Many ENERGY STAR qualifying systems.
- Low ambient cooling to 0° F with wind baffle.

P-SERIES (PUZ-HA) FEATURES

- **DRY MODE**
- **MULTIPLE FAN SPEEDS**
- **AUTO COOLING/HEATING CHANGEOVER**
- TWINNING OF TWO 18KBtu/h indoor units possible from one 36KBtu/h outdoor unit for wider distribution of capacity
- **AUTOMATIC RESTART** Peace of mind and ease of use in the event of power outage
- **LINE LENGTHS** up to 245 ft
- **HOT START PROCESS** means warm air flows from the start

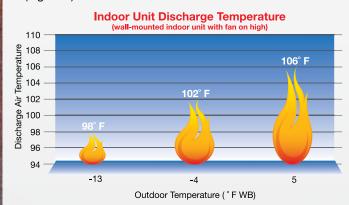

Mitsubishi Electric P-Series Hyper-Heating

(Figure 1) **Hyper-Heating INVERTER vs. Other Units** % Heating Capacity vs. Outdoor Temperature 120 10<mark>0</mark> % Heating Capacity 80 60 40 20 -13 10 47 Outdoor Temperature Degrees FWB · Mitsubishi Electric Hyper-Heating INVERTER (H2i™) Mitsubishi Electric Standard INVERTER heat pump system Typical Unitary Pump Performance

Does not include correction factor for defrost

(Figure 2)

Heating Performance at Low Temperatures

Our exclusive H2i P-Series units recover heat energy that is normally wasted in the flash process at the outdoor coil. H2i flash technology helps the system overcome issues associated with conventional heat pumps, such as decreases in low-side pressure, refrigerant mass flow rate, and operational capacity. What you'll see is that the H2i P-Series units deliver 100% of rated heating capacity at 5° F and 80% at minus 13° F outdoor ambient temperatures (without the use of energy-consuming electric-resistance heaters).

PEA/PEAD STATIC PERFORMANCE CURVES

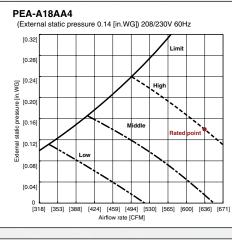

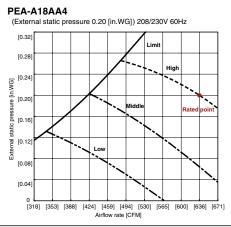

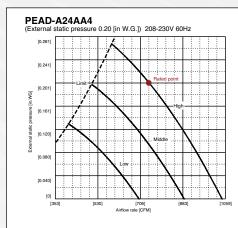

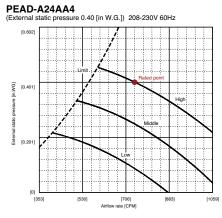

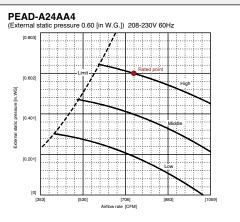

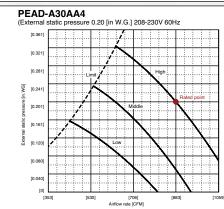

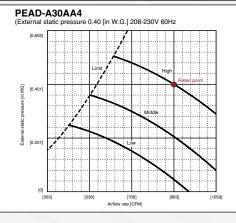

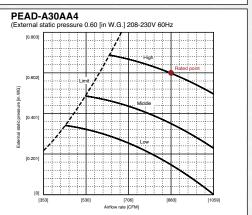

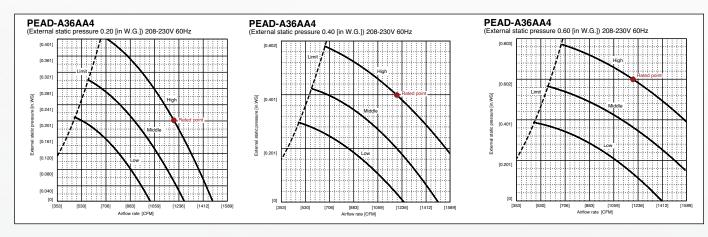

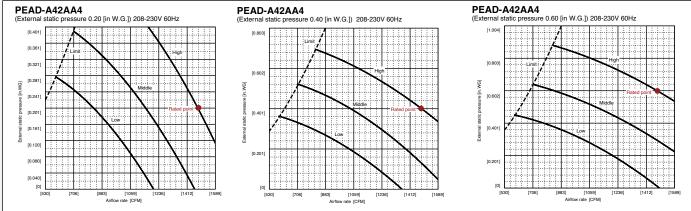

Ducting considerations for the PEA/PEAD Horizontal Ducted Indoor Unit

With the introduction of ducted indoor unit products, some information on duct selection and design seems appropriate. The performance and design of these indoor units, selection, and proper duct sizing and installation are critical elements to consider when designing these indoor units for satisfactory performance and installation.

The maximum available static pressure from the PEA indoor unit is 0.2 in. W.G. and for the PEADs 0.6 in. W.G. Therefore ductless design is an important element to consider for delivery of proper airflow to a conditioned space. The emphasis should still be on moving refrigerant and not air; not only will this dynamic help to work within the static pressure available, but it is also more efficient. Here are some good practices when ducting the low profile unit:

- When reviewing static pressure duct loss in a system, keep in mind the maximum static pressure the unit will see.
- Flexible duct work, while making installations simpler, can add unnecessary static pressure loss if not utilized properly. Most of the static
 pressure duct loss comes from allowing the duct work to sag. Allowing even a 30 percent sag in the duct work can increase the static
 pressure loss up to eight times. Flexible duct work runs should be kept to less than 15 ft. Elbows should be kept to a minimum and
 made as wide as possible.
- Grilles should be selected so that the air velocity is less than 500 ft. per minute, for this prerequisite will help to minimize static
 pressure loss.

The chart below shows grille sizes and corresponding flow rates to keep the static pressure loss under 0.05 in.:

Airflow (CFM)	50	100	150	200	250
Grille Size (In. x In.)	6x6	6x6	8x6	10x6, 8x8	12x6, 10x8

 The final component is to understand what the static pressure loss is in the duct work. The chart on the right shows approximate static pressure loss per 100 ft. for various round duct sizes and flow rates. If flexible duct work is being used and the flex remains stretched, 20 percent can be added to the values below to approximate the loss.

Inches of Static Pressure Loss per 100 ft. of Hard Duct								
	4"ø	6"ø	8"ø	10"ø				
50 CFM	0.15	0.02	-	-				
100 CFM	0.6	0.08	0.02	-				
150 CFM	-	0.2	0.04	-				
200 CFM	-	0.3	0.08	0.02				
250 CFM	-	0.45	0.11	0.04				
500 CFM	-	-	0.4	0.15

LIMITED WARRANTY | Seven-year warranty on compressor. Five-year warranty on parts.

MHK1 Wireless Wall-mounted Remote Controller Kit

WIRELESS WALL-MOUNTED REMOTE CONTROLLER

- Backlit, easy-to-read display
- Dual setpoint control with system changeover
- Enabled with RedLINK™ reliability
- Installs anywhere with simple wall-mounted design
- Compatible with MCCH1 Portable Central Controller and MOS1 Outside Air Sensor
- Requires wireless interface (included in kit)

MIFH1 WIRELESS RECEIVER

- Required for MRCH1 Wireless
 Remote Controller included in MHK1 Kit
- Enabled with RedLINK reliability

MCCH1

PORTABLE CENTRAL CONTROLLER

- Up to 16 RedLINK™ devices
- Requires MHK1 per indoor unit
- Monitor and control On/Off, Mode, and Set Temp
- Schedule override capability
- Does not interfere with other wireless devices
- Displays outside air temperature and humidity when used with MOS1

OUTSIDE AIR SENSOR

- Monitors outside air temperature and humidity
- Displays on MHK1 Wireless Wall-mount Remote Controller and MCCH1 Portable Central Controller

Optional RedLINK Internet Gateway

(Available through select distributors)

- Connects any RedLINK Comfort System to the Internet to provide remote access from PC, smartphone or tablet
- No monthly fee, free app download
- Remotely monitor and control your cooling and heating system, at any time, from any place
- View/change system settings and access multiple systems/zones
- Provides over 90° temperature/comfort alerts through a dedicated website
- Upgrades automatically as new features become available

Wireless Technology

Just connect the Gateway device (far right) to your internet router, download the free app, register a serial number with the Gateway web site and pair the system with the RedLINK™ enabled devices of your choice. You'll be ready to control in about 15 minutes.

MHK1 FEATURES

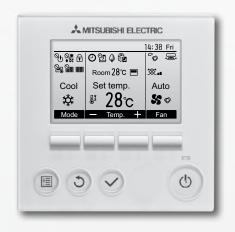

FUNCTION	DESCRIPTION
0N/0FF	On/Off operation for a single indoor unit
Operation Mode	Cool / Drying / Auto / Heat / Fan operation modes dependent on connected system
Temperature Setting	Set temperature from 40° F - 99° F depending on operation mode and connected system
System Changeover Deadband Value	2° F - 8° F
Schedule Operation	5-2, 5-1-1
Optimal Start	Eliminates the guesswork when setting your schedule. Allows the remote controller to "learn" how long your split-zoning system takes to reach programmed temperature setting, so the temperature is reached at the time you set
Fan Speed Setting	Hi/Mid-2/Mid-1/Low/Auto Available fan speed settings dependent on connected system
Airflow Direction Setting	Airflow angles: 100° - 80° - 60° - 40° and oscillate available airflow direction settings dependent on connected system
Permit/Prohibit Function	Individual prohibit operations for each remote controller function (ON/OFF, Set Temperature and Operation Mode)
Space Temperature	Displays the measured space temperature
Error Indication	Displays error code
Display Outside Temperature and Humidity	Requires optional MOS1 Outside Air Sensor
Dimensions - (W x D x H)	Remote Controller: 5-3/16" x 1-1/2" x 3-9/16" Receiver: 3-1/4" x 1-5/16" x 6-7/16"
Operating Ambient Temperature	Remote Controller: 32° F – 120° F Receiver: -40° F – 165° F
Operating Ambient Humidity	Remote Controller: 5% - 90% RH (non-condensing) Receiver: 5% - 90% RH (non-condensing)
Power Supply	2 AA batteries (included)

Note: MHK1 Compatible with current INVERTER-driven M-Series as noted in data charts.

PAR-31MAA and PAC-YT53 Wireless Controllers

PAR-31MAA BACKLIT MA REMOTE CONTROLLER

- Room Temperature: Displays room temperature sensed either at the indoor unit (default) or at the remote controller
- Set Temperature Range Limit: From the Backlit MA Controller, the allowable set temperature range can be reduced for cool and heat modes
- Function Lock Out: Prohibits all functions or all functions except On/Off from the backlit MA controller
- Wiring: connects using twowire, stranded, non-polar control wire to indoor unit connection terminal or control adapter requires crossover wiring for indoor unit grouping
- Dimensions: 4-3/4 x 3/4 x 4-3/4" (120 x 19 x 120 mm)

PAC-YT53CRAU SIMPLE MA CONTROLLER

Controls group operation for up to 16 indoor units in a single group

- Set temperature range limit: Simple MA allowable set temperature range can be reduced for cool and heat modes
- Room temperature can be sensed either at the indoor unit (default) or at the remote controller
- Grouping: Same group use only with other PAC-YT53CRAU Simple MA Controllers, PAR-31MAA Backlit MA Remote Controller, and PAR-FL/A32MA Wireless MA Remote Controllers with up to two remote controllers per group
- Wiring: Uses two-wire, stranded, non-polar control wire for connecting TB15 connection terminal on the indoor unit. Requires crossover wiring for grouping across indoor units
- Dimensions: 2-3/4 x 9/16 x 4-3/4" (70 x 14.5 x 120mm)

PAC-SF83MA-E M-NET ADAPTOR

- Connects P-Series System to Mitsubishi Electric's M-NET Control network
- Provides connection and control from Central Control Systems
- Identifies P-Series System with address settings

The PAR-FL32MA provides complete control for all P-Series indoor units. Use requires the PAR-FA32MA Receiver installed in the indoor unit. All PKA units have the receiver built-in as standard and do not require the PAR-FA32MA.

FUNCTION	DESCRIPTION
ON/OFF	On/Off operation for group of up to 16 indoor units
Operation Mode	Cool / Drying / Auto / Heat / Fan only Available operation modes vary depending on connected system
Temperature Setting	Set temperature from 67°F – 87°F depending on operation mode and connected system
Timer Operation	On/Off timer
Fan Speed Setting	Hi/Mid-2/Mid-1/Low/Auto Available fan speed settings vary depending on the connected system
Air Flow Direction Setting	Air flow angles: 100° - 80° - 60° - 40° and oscillate Available air flow direction settings vary depending on connected system
Permit/Prohibit Function	Individual prohibit operations for each remote controller function (ON/OFF, Set Temperature, Operation Mode and Filter reset)
Space Temperature	Displays setpoint temperature only
Dimensions - (W x D x H)	5-1/8" x 3/4" x 4-3/4"
Power Supply	2 AAA batteries

Wind Baffle Wind Baffle	WB-PA1 WB-PA2	P-Series - PUY/Z A12, 18MBH P-Series - PUY/Z A24, 30, 36MBH require 1 piece - PUY/Z42 and PUZ-HA30, 36,
wind band	WD-FAZ	42MBH require 2 pieces

DIAMONDBACK™ BV-SERIES BALL VALVES

Diamondback BV-Series ball valves include the following features:

- Engineered for mini-split and multi-split HVAC units
- Full port design with flare connections
- 700 PSIG rated
- Flare connections

Other important information:

- Size available: 1/4", 3/8", 1/2", 5/8"
- · Fully factory assembled
- · Furnace brazed and pressure tested
- Each ball valve is equipped with Schrader® Valve for refrigerant service
- Temperature range: -40° F to +325° F (-40° C to +149° C)
- Forged brass body and seal cap
- Polytetrafluroethylene (PTFE) seals and gaskets (no synthetic O-rings)
- Seal cap design permits valve operation without removal of seal cap
- One-year limited materials and workmanship warranty on ball valves

Part Number	SAE Flare	Α	В	С	D		F

PLATFORM STANDS

DIAMONDBACK PLATFORM STANDS

Lift the outdoor unit to new heights.

- Easy to install
- Available for all sizes of mini-split or multi-split systems
- Color matched to the outdoor units
- One-year warranty

Model DSD-400N L: 15 3/4" W: 3 1/4" H: 3 1/4"

FILTER BOXES

FILTER BOXES

FB Series filter boxes are available in compatible sizes for all M-Series horizontal ducted indoor units. FBL1 filter boxes include 1" thick pleated MERV 8 filter(s) installed. Filters are tested in accordance with ANSI/ ASHRAE Standard 52.2 and Rated Class 2 under U.L. Standard 900.

The cabinet is constructed of non-insulated 20 gauge, G-60 galvanized steel with a foam gasket and provides an air-tight connection to the indoor unit and access door. Gasket material complies with UL 723 requirements. In addition, a screw-through cabinet design for secure attachment to indoor unit and return connection in rear is easily field-converted to bottom return.

Part Number	Part Description
FBL1-1	FB Series Filter Box for SEZ-KD09NA4
FBL1-2	FB Series Filter Box for PEA-A12AA4
FBL1-3	FB Series Filter Box for PEA-A18AA4
FBM2-3	FB Series Filter for PEAD-A24/30AA4

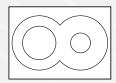

Caps On

DIAMONDBACK LINESETS

Diamondback linesets include the following features:

- Quick, efficient, and economical field installation using factory applied Twin Lube insulation and flare connections with flare nuts mounted
- Correct lengths for reducing waste and time
- Quality, consistency, and economy
- All Diamondback lineset tubing is tested in accordance with ASTM E243
- One year warranty

"TWIN-TUBE" LINESET INSULATION DESIGN

- Balanced outside diameter for uniform coil/uncoil position stability.
- Minimum 1/2" insulation thickness on both tubes
- Meets UL94 and ASTM E84 Standard

Lineset Model Number	Tube Size (In.)	Length Ft.	Insul.

Put a professional finish on air-conditioning installations with an easy-to-install modular system that beautifies exteriors and protects linesets, drainlines, and wiring.

- Can be used indoors, too! Meets UL94v-0 for interior applications
- Has snap-on covers and a full selection of couplings, elbows, T-joints, caps, and more for any application: complex or simple
- Offers high-quality PVC with UV inhibitors for outdoor service in all weather conditions
- Can be painted with most house paints to match exterior decors
- Is not just for HVAC. Hides any exterior cabling, piping, or wiring
- Is available in four sizes: 3", 4", and 6" tubes
- One-year warranty

Improved sound attenuation makes Lossnay® units quiet enough for places where silence is a must such as meeting rooms and libraries. A free-cooling function is standard to help reduce costs and boost efficiency. The integrated bypass damper design makes installation and system management quick and efficient. Lossnay models offer three ventilation modes:

- Energy Recovery Heat Exchange
- Bypass No Exchange
- Auto Heat Exchange/Bypass
