

Hi X,

New research [<https://www.nejm.org/doi/10.1056/NEJMc2104974>] coming out of Qatar Foundation shows that the Pfizer vaccine is 95% effective against the most severe outcomes on the COVID variants from the UK and South Africa. This finding represents a major data point in reassuring the public that current vaccines can protect against COVID variants.

If you are interested, I can connect you with Dr. Laith Abu-Raddad of Weill Cornell Medicine-Qatar in Qatar Foundation's Education City. Dr. Abu-Raddad served as lead author on the study and can discuss this research and its implications in greater detail.

Best,
X
