

Extracting Private SNPs from your FGC report.

Open the **haplogroup compare report** (in Excel). If you are using a Macintosh, rename the file to the .txt extension and open in Numbers.

Use the find command and type Private SNPs: in the search window.
Select the Private SNPs table in the sheet.
Sort by **named variant status**.

The FGCXXXXX named SNPs are the new private SNPs in your results.

(blank) no star under reliability warning level = 99% reliability

- a. one star (*) = 95% reliability
- b. **: about 40% likely genuine;
- c. ***: about 10% likely genuine
