

Instructions for creating a memorial DVD program at home

We strongly suggest bringing the completed program to Mt. Scott Funeral Home **48 hours prior to service** to test on our system. That way if any adjustments need to be made, there will be adequate time before the service for you to make those adjustments.

Please let the funeral director know ahead of time if you are providing your own program, dvd or music.

Our system supports the following DVD types: DVD+/-R or DVD +/-RW.

Format of program must be DVD, not data, nor power point.

If you are creating the program within iMovie the program must be burned as a DVD within iDVD to work properly.

We cannot be responsible for home created programs on DVD that do not work properly on our system.

If the program is on laptop you will need to provide either a HDMI or VGA cable to connect to our system.

Our system does not support video files from iPads or iPhones. However, iPads/iPhones may be used for music to run through our system if needed. If your device requires a cable other than a standard AUX cord, you will need to provide the cable. Better yet, we will gladly provide a burned CD of chosen music for your service if notified 24 hours prior to service time.

Thank you,

Mt. Scott Funeral Home
