

POWER GENERATION SERVICES

GENERATION REDEFINED

Quanta Services' capabilities have established a new definition for a complete scope of utility-scale engineer, procure, construct (EPC) services. Quanta leverages its network of the country's most respected specialty contractors to deliver turnkey EPC solutions for generation projects, plus the ability to finance any size project and facilitate development. Exclusive to Quanta clients, this hybrid of services provides a unique valued-added solution.

A New Generation of Turnkey EPC Solutions

Quanta companies self-perform turnkey EPC services, thereby offering a single source for complex projects. Additionally, financing is available to facilitate construction.

Quanta's collective expertise enables application of specialized expertise across the entire project — from start to finish — and provides clients with reliable results at competitive prices.

- **Project Development/Pre-Construction** - Through estimating and technology evaluation, site selection consulting, scope definition and PPA bid support, Quanta is focused on developing projects designed for success.
- **Engineering** - Quanta's power generation engineers conduct system modeling, technology selection and array optimization. Patent-pending components and systems, proprietary innovations and technologies offer clients value-added solutions and cost efficiencies.
- **Procurement** - Quanta's project-based, technology-neutral procurement approach boosts performance and cuts balance of system costs.
- **Construction** - Decades of experience in specialty construction, a dedicated fleet of construction equipment and an unmatched work force ensure timely completion of any project. An exemplary safety record keeps liability low and reduces costs.
- **Operation and Maintenance** - SCADA and production monitoring, module washing, structural maintenance and vegetation management are a few of Quanta's ongoing service offerings.

Building on a Solid Foundation

Quanta companies contributed to the original build out of North America's electric infrastructure. Today, these same companies are applying innovative technologies to modern generation solutions. Licensed to do business in all 50 states and Canada, Quanta is the largest specialty contractor in North America.

THERMAL, SOLAR & BIOMASS POWER GENERATION SERVICES:

- Planning and permitting support
- Plant engineering and optimization
- Site preparation
- Equipment procurement and installation
- Acceptance testing & commissioning
- Transmission & distribution
- Grid interconnection
- Operations & maintenance
- Environmental compliance
