

Our Solutions

Whether you are cultivating communication via voice, message or data, Somos offers the solutions you need to engage your customers.

If you're looking for the highest levels of trust, innovation and expertise from a company, look no further – Somos is by your side.

Somos, a leading registry management and data solutions provider, offers an enviable portfolio of registries, products and services that provides trusted data to help organizations innovate, grow, and thrive.

These solutions not only fill market gaps and provide a unique value in our increasingly interconnected world, but they also preserve confidence and instill trust in communications by exemplifying neutral stewardship, security and reliability and customer empowerment.

Trusted Solutions You've Grown to Rely On

SMS800 TFNRegistry®

Building a Foundation of Trust

A secure database for all Toll-Free Numbers and a record of their active/inactive status is at the root of establishing trust in number administration. That's why the SMS/800 TFNRegistry® not only allows certified Toll-Free Service Providers to provide enterprise customers with a trusted, easily recognizable brand identifier but also an authoritative repository for verified Toll-Free Number information. Through the data housed in the SMS/800 TFNRegistry, carriers, brands, and consumers have a time-tested foundation for the future innovation in Toll-Free communications.

TSSRegistry™

Keeping Messaging Over Toll-Free Trusted

These days, consumers want options that fit into the flow of their daily lives. With the TSSRegistry™, enterprises can work with Service Registrars to text enable Toll-Free Numbers with confidence. The TSSRegistry™ features an established Resp Org validation process that validates end user ownership before text enabling a Toll-Free Number. This ensures that all numbers that are text enabled are meant to be!

RouteLink®

Identifying Fraud Before it Can Happen

Providing traditional and IP routing data to carriers is RouteLink's core value proposition. No one-trick pony however, RouteLink® additionally provides data which can be used to act as a first line of watch for identifying potentially fraudulent activity. Via the SMS/800 TFNRegistry, RouteLink monitors the active/inactive status of Toll-Free Numbers and incorporates this reporting in the routing data it provides users. Leveraging this data, RouteLink can be used to tip off Service Providers to malicious activity and thus help them minimize fraudulent Toll-Free Number usage.

Authentication Enablement Solutions are at Your Fingertips

RealNumber™

Right To Use: Maintaining the Integrity of Voice Communications

It's well known that the trust economy is in full swing and that organizations that cultivate greater levels of trust are better positioned to thrive in this new era. RealNumber® Right To Use (RTU) helps underscore this by providing an authentication enablement solution that heightens consumer confidence while likewise supporting the STIR/SHAKEN mandate. Best of all, RealNumber RTU can help enable enterprise customers to achieve A-level Attestation on outbound calls.

RealNumber™

Do Not Originate: Protecting Consumers from Telephony Fraud

At a time when consumer protection is at a premium – and scammers will stop at nothing to defraud the innocent – RealNumber® Do Not Originate (DNO) is an effective solution for combatting illegal spoofed phone calls. The platform works to allow Responsible Organizations (Resp Orgs) to identify TFNs that do not originate calls, thus helping to prevent calls from illegitimate numbers to be passed on to the recipient caller AKA the customer.

TFNIdentity®

Drive Trust and Maximize Customer Engagement

Being able to recognize an incoming call – especially an incoming Toll-Free call – can be the secret you need to drive trust and maximize customer engagement. Help your customers hit a homerun with TFNIdentity® – a CNAM database that customers can trust to deliver Caller ID information from their Resp Org, a source they know and recognize.

The Need for Trust Today

42+

Million Toll-Free Numbers

5.5+

Million Text Enabled Toll-Free Numbers
