

Van Weights Explained

Tare Mass

The unladen weight of the complete new trailer as delivered from the factory (including any factory fitted options)

We weigh every van as it comes off our assembly line to establish the tare mass which is marked on the van.

Each van is weighed with:

- Water tanks empty
- Gas cylinders empty
- No luggage or personal effects
- No battery - as it is not fitted at our factory

Towball Mass

The weight imposed on the tow vehicle's tow ball by the coupling.

Towball Mass Tare:

Unladen as from factory

Towball Mass Loaded Actual:

With load on board (where items are loaded in the van will impact on actual towball mass)

Towball Mass Maximum Permissible:

Maximum allowed with caravan loaded as rated by manufacturer

ATM - Aggregate Trailer Mass

The total laden weight of a trailer, which includes the tow ball mass and whatever you add as payload (eg. water, gas, luggage). The ATM is specified by the trailer manufacturer and must not be exceeded.
