Enhance Quality. Advance Discovery.

CancerLinQ® aims to rapidly improve the care of cancer patients—no matter who or where they are.

**For Practices**
Better data leads to better patient care.

- Leverage automation and data analytics for quality management and practice operations
- Automate quality management and practice reporting
- Identify opportunities for improvement in operations and quality

**For Providers**
Better data leads to better clinical outcomes.

- Use near real-time quality analytics for every patient, every day
- Explore and learn from the experiences of over 2 million patients using simple tools
- Prospectively improve your own quality of care with actionable insights
- Contribute valuable patient data to a comprehensive cancer research database of de-identified data

**For Quality Teams**
Better data leads to better quality management.

- Access near real-time, automated quality metrics to help maintain accreditation and quality certifications
- Generate automated reports at the physician, practice, location, and health-system levels
- Monitor and benchmark data across quality programs to identify opportunities for continuous improvement
- Eliminate the need for time-consuming manual data entry and submission

**For Researchers**
Better data leads to better insights and reporting.

- Access de-identified and harmonized data from over 2 million cancer patients nationwide
- Use a scalable cloud computing platform to conduct research from multiple real-world data sets

---

1 Data is ingested and imported nightly from practice EHRs to provide near-real-time data

2 A recent study showed that, for a large health system, the cost of manually abstracting and analyzing one measure for 20 patients was approximately the same as the cost of their entire annual CancerLinQ subscription fee, which includes automated abstraction, analysis and reporting for 17 measures in near-real time for their entire cancer patient population
