The debatable question that I developed was should combustion engines be banned and should electric vehicles fully takeover. Something I learned throughout my research is that the question I developed is easy to debate because information was everywhere, but the problem I faced was landing on one position because I embedded so much information in my essay regarding both sides. Something that I want to tell others about the issue is that everyone should have a choice when it comes to vehicles we want to drive because it is a personal decision. The stance I took is that combustion engines should not be banned because it is reliable and improvements have been made to make them safer for the environment. The target audience that I am trying to attract is the people who like to drive combustion engines because they know it provides a different driving experience compared to electric vehicles. The other audience I am also trying to attract by displaying my issue are professional race car drivers. The automotive world is very close to me especially with racing, and we don't want that community to be taken away from us because electric vehicles somehow make the environment cleaner and combustion engines are destroying the environment which is not true. [Grassroots Motorsports](#) is a forum page that is filled with car enthusiasts and people who love driving, the forum side of this platform allows people to share their opinions on topics regarding the automotive industry. The editorial style of of Grassroots Motorsports aligns with the style and tone of my op-ed because the platform includes statistical data and diagrams that show relevance to the topic being discussed. The submission guidelines

for having your topic be presented on Grassroots motorsports is not technical, you must become a member of the forum page in order to share pictures and add a post regarding a topic relating to automobiles. The reason I chose Grassroots motorsports to share my op-ed is because my topic is not relevant to everyone because not everyone drives and has to worry about this topic.

However, for the ones who do care about cars and how the market is changing technologically. A forum page like this platform allows car lovers to share their opinions and they will be heard and understood and potentially be refuted with other data coming from the community.
