

DIY Visual Aid

The photo above is my DIY visual aid. I wanted it to be more like a meme since I think the topic covers something serious, so I wanted to add some bit of humor. I was going to do a more direct route, like only having the image of the human fighting the robot, but my approach involves peace, and so I wanted to show the opposite of fighting with a robot. The rhetorical appeal is pathos since I want to show humans and artificial intelligence creating a connection. Since my op-ed is about balancing the relationship between work and AI, I wanted it to seem like it's a good thing to work with AI and not be against it. I don't want it to seem like I want AI to do all the work and AI will replace you, but rather help/work with you, like a partner. My audience is mainly directed towards younger people, employees, students, and others. I know that AI brings risks such as job displacement, unemployment, and more, but AI also brings benefits such as productivity and saving money. Like I mentioned in my op-ed, we shouldn't treat artificial intelligence like it's a replacement for a human being but rather like a tool/partner. Humans and

AI should work together. Doing this would only benefit artificial intelligence too, since it relies on information that humans give in order for it to work.
