

Martin A. Sierra

City College of New York

ENGL 21003 K: Writing For The Sciences

Professor Anna Voisard

March 4, 2025

1. A research question: a question that will guide your group's research and keep your work focused.

- What are ethical risks of crispr to only use it to stop diseases and possible disabilities? (ex: to what extent is crispr modification acceptable?)

2.A schedule of deadlines for submitting work to your groupmates (include deadlines with dates/times for individual section submissions, abstract/introduction/conclusion/references work, post-peer review group revision, final submission). 3/15/25

3.A basic outline of sections, including a subtopic/focus for each group member.

Introduction

Gene editing is technology that has been used since the late 1900s however in recent times it has become an alternative to babies born via natural causes deemed natural (insert here). It has been used to modify babies to be born without negative side effects that contribute to the development of adulthood. These include diseases, disabilities, etc and these have been the main argument for the use of gene editing...

Technology

Benefits

Cons

4.A brief explanation of how your group plans to combine the work of all members into one cohesive document.

- What platform are you going to use? Docs
- Who is putting it together? Erick, Angel
- Who is going to proofread? Martin
- How will you make it sound and look like one cohesive document, as opposed to three distinct voices/perspectives/styles? Connecting ideas and using the right transition words and fixing little details.
