

How to use your iPhone as a MIDI controller

1. Download a MIDI application to your phone
2. Use the charging chord to connect USB C port on iPhone to USB C port on computer
3. If your phone iOS is iOS15 or higher, your computer must be operating on iOS High Sierra or later systems.
4. In spotlight search, search "MIDI" to find the Audio MIDI setup window
5. You should see your device listed in the audio devices list with a small button allowing you to "enable" your device. Activate that button
6. Once you've enabled your device, go to the Window menu and click "Show MIDI studio"
7. In MIDI studio, your device should be visible, and if it is not greyed out, it is correctly connected
8. Open your DAW, and create a new instrument track
9. Choose the instrument you would like to use
10. Ensure that the output destination in your MIDI app is set to your computer
11. Begin to play!
