Assignment 6

MIDI Setup Mini Guide for iPhone and Waveform

1. Look up a free MIDI app in the app store, such as the app “MIDI Keyboard,” and download the app onto your smartphone.
2. Connect your smartphone to your PC with a USB cable. Typically, you can use your phone’s charging cable, as long as one end fits your phone’s charging port and the other end fits your PC’s USB port. Check that the connection is successful by opening a new File Explorer window and checking for your device name.
3. Open the “MIDI Keyboard” app on your phone. Select “Input” and choose USB.
4. Open Waveform on your PC. Check that your phone is selected as the MIDI input device on your DAW.
5. You should now be able to press keys on your MIDI app and see that the DAW is receiving this MIDI data.
