

Edgar Azuara

September 21st, 2025
New York, New York 10029

Dear Bryan Plaster :

My name is Edgar Azuara, I am applying for an internship here at (), My intended major is Computer Science and the reason I am applying to this internship is because AI is being used more and more in a day to day basis, and there's no other company I would want to work with but yours to do exactly that and learn more about AI. Communication skills and Experience in using Python would help me tremendously in this internship and working here would hone my skills even more and also inform me on the wonders of AI and how its growing.

Since I used to work at the Boys Club of New York, I have experience in Communication skills, Teamworking, and Mentorship. I was an assistant teacher in This Club communicating with the children to see what she needed help with and Mentoring, giving them more tips on how to grasp the idea of playing guitar easier. Whenever it came to teamwork, me and the Main teacher would split up how we would help each kid by letting me help the kids who felt behind from the rest of the class and the teacher would continue to go at the same pace as he was going. This really helped out my patience too because kids can be stubborn sometimes, and while working with them I started to get Patience and my adaptability to deal with a very anxiety induced and pressured situation could be passed while being calm myself to assess how to figure out the best approach.

I also want to emphasize how I've always been able to be on top with electronics and technology considering since I was a little kid I have been working with coding and computers as well. In Elementary school I started to code in a Program that would start before school, and it was a Video game coding program. I didn't think about it at the time but when I started I instantly became hooked into electricity and technology. Coding was extremely confusing considering I was using Python for the first time, but after using it more and more my codes became fluent. Especially now considering AI is slowly being used more and more in a daily basis I would love to get even more information and be more informed on the formation of AI and how it's processing information so fast.

My Bilingual skills and my ability to use technology more fluently than other people in this area, this internship would boost my knowledge in AI even more. I would like to know when I can get an interview to start, and to know when I can do the interview as soon as possible as well. My number is (646)382-5330, and my email is edgarazuara2@gmail.com . Thank you for this opportunity to apply here and I am looking forward to seeing what I can do for your company

Sincerely, Edgar Azuara
