Table of Contents

Introduction.....	4
Problem Area 1: Volunteers or staff of a certification program (or its related entity) are involved inappropriately with both certification and education functions.....	4
Problem Area 2: Subject-matter expert (SME) panels for the certification program are not sufficiently representative of the certificant population.	5
Problem Area 3: The linkage between (1) the findings of the study undertaken to determine examination content (such as a job analysis) and (2) the examination blueprint and the content of the examination is either not clearly documented or nonexistent.	7
Problem Area 4: Essential information about the program is difficult to find or not available. Two examples of information that must be readily available are a weighted content outline of the examination and the procedures for requesting accommodations under the Americans with Disabilities Act (ADA).	9
Problem Area 5: Programs are hard-pressed to present an evidence-based rationale for the length of the recertification period.....	11
