Instem

161 Washington Street, Ste 1550
Conshohocken, PA 19428

Tel: 610.941.0990

Email: julie.jones@instem.com
Website: www.instem.com

Instem provides software and hardware solutions for Genetic Toxicology. Visit us to learn how clients are using our solutions to improve the integration between data acquisition, auditing and reporting for regulatory genotox assays. Our flagship solutions include Comet Assay IV, Sorcerer Colony Counter, Ames Study Manager and Cyto Study Manager – which has modules for the comet assay, micronucleus test and chromosome aberrations. If the electronic submission of data interests you, be sure to talk to us about SEND!

“Consolidating, harmonizing and empowering the processes that help bring products to market faster.”

Aniara Diagnostica

7768 Service Center Drive
West Chester, Ohio 45069

Tel: 704.609.5028

Email: jatkinson@aniara.com
Website: www.aniara.com

Aniara Diagnostica is committed to driving continual exploration and discovery throughout the medical universe seeking new, enhanced, and innovative products. In order to further exploration, Aniara offers a Research Discount for academic researchers and an annual Aniara Grant for students/trainees focused in innovative coagulation/hematology research.

Our products include Xenometrix's Mutagenicity and Endocrine Disruptor Assays and screening tools. Hyphen Biomed's diagnostic and research reagents for thrombosis, hemostasis, and autoimmunity. Medicago's buffers, immune reagents, and bioactive proteins. As well as, U-Cytech's reagents for life science research.

Asystbio Laboratories, LLC

1340 Environ Way Fl 3
Chapel Hill, NC 27517

Tel: 919.670.2466

Email: ted.powers@asystbiolaboratories.com
Website: www.asystbio.com

Asystbio Laboratories, LLC is researching and developing practical technologies in applied genomics and big data in a collaborative effort with biologists, mathematicians and clinicians. ABL scientists have developed a custom set of reagents and proprietary computer programs for application of next-generation DNA sequencing to count AML-driving gene mutations in blood or bone marrow cells.
