

DB2 11.1 for Linux, UNIX, and Windows

March 10, 2017
Issue 3

Fred Sobotka

IDUG's featured topic for this month is DB2 11.1 for Linux, UNIX, and Windows. The V11.1 release was announced just under a year ago and already has its first fix pack, making it a compelling version for DB2 LUW shops to evaluate as versions 9.7 and 10.1 approach their end of support date.

Kicking off the month is Matthias Nicola's overview of "[What's New for BLU in DB2 11](#)", now available as an IDUG Tech Talk video. This presentation is packed with details about how an already revolutionary DB2 10.5 feature became even better in 11.1. After that, IDUG articles from IBM Champions Phil Nelson, Fred Sobotka, and other DB2 power users will explore noteworthy aspects of the newest DB2 LUW release.

Time is Running Out! Register for IDUG in Anaheim by March 20 to Save!

Registration for the [IDUG DB2 Tech Conference](#), April 30 - May 4 in Anaheim, California is open, including registration for the first-ever [IDUG Data Tech Summit](#), taking place May 1-2 during the DB2 conference.

DB2 Professionals: Join us for five days of the latest in DB2 technologies and networking opportunities.

IDUG in Anaheim

Data scientists and architects: The IDUG Data Tech Summit is for you! As part of registration for the IDUG Data Tech Summit, taking place May 1-2 in Anaheim, California, you will have the opportunity to take the Big Data Architect Certification Exam - armed with the latest learnings from the summit and your deep data experience. The price of the exam is included in your registration - a \$400 value!
