BENEFITS OF USING SANI SPORT & SPORTS DEFENDERS

- 01** Sani Sport is the most widely used bacteria and odor reduction system in the world.
- 02** This 16 minute waterless patented process uses ozone to destroy 99% of bacteria and mold and 100% of infectious viruses found in protective gear.
- 03** Ozone has been proven to kill over 130 types of bacteria, viruses, fungi, molds, etc.
- 04** The ozone cleaning agents are 3,000 times faster and 150 times more powerful than bleach.
- 05** Environmentally safe and scientific process is used by 27 NHL and 14 NFL teams.
- 06** Prolongs life of sports gear without harming integrity and quality of the protective gear.
- 07** Dry process allowing equipment to be worn immediately after treatment.
- 08** Protects equipment from new bacteria formation with protective layer.
- 09** Extends life of equipment and reduces replacement costs... very small investment for a very big gain!!
- 10** We are a mobile service that can provide onsite sanitization available 24/7 with team/school discounts available.

THE BEST CURE FOR SKIN INFECTION IS PREVENTION

©Mayo Foundation for Medical Education and Research. All rights reserved.

In the past few years **MRSA** (Methicillin Resistant Staphylococcus Aureus) has become a more visible and very dangerous bacteria that has caused players to be hospitalized. Bacteria residing on sports equipment unknowingly and easily enters the body through abrasions on your skin. As it enters our skin it causes an infection that can progress rapidly leading to possible procedures, surgeries, hospitalizations, and potential deadly outcomes.

The Center for Disease Control (**CDC**) and the National Athletic Trainers Association (**NATA**) have recommended schools routinely clean their sports equipment.

SPORTS DEFENDERS

USES

Sani Sport

TECHNOLOGY

Sports Defenders uses the self contained Sani Sport System that effectively uses ozone to decrease the microbial load in equipment for prevention of injury and illness. This waterless patented technology will eliminate odors in a 16 minute cycle by eliminating between 99-100% of dangerous bacteria.

Next, a natural tree oil is fogged into the gear to provide a protective barrier to reduce future bacteria regrowth.

Finally, a natural bactericide is sprayed on the equipment as an additional protective layer to prolong treatment.
