

## **Ridge Baseball Club – Field Lighting Procedures**

The home team manager playing the last game on any field on the complex is responsible for turning on and off the lights. The visiting manager should confirm that the other manager is turning off the lights.

Remember when turning the lights on, they take about 15-20 minutes to warm up.

**The lights MUST be off by 8:50 on Sundays-Thursdays and by 9:50 on Fridays and Saturdays.**

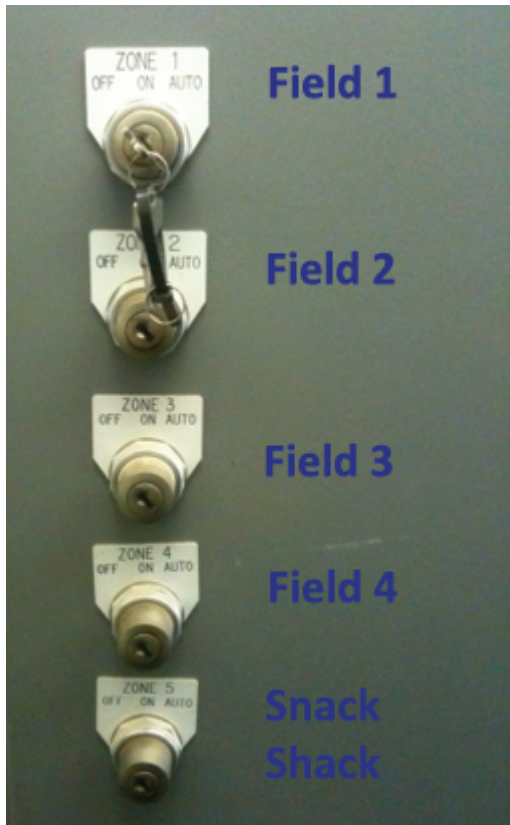

The light keys are in the electrical room on the north side of the field house. The field house is the building near field one illustrated below.

The door combination is "1234". Please remember to lock the door when finished, we don't want to leave this electrical room open to the public.

The field lights are controlled by keyed switches on a large gray circuit panel towards the rear of the room. There are 5 zones for the lights. The fields are switched using the zone with the corresponding field number. In other words, Field 1 is controlled by Zone 1, Field 2 is controlled by Zone 2, Field 3 is controlled by Zone 3 and Field 4 is controlled by Zone 4. Zone 5 is to control the light bank near the snack shack.

There is only one key in the switches at any time. The key can be removed and placed in any of the switches. To turn on the lights, move the key to position "ON" and to turn off the lights move the key to position "OFF".

If you have any trouble or are uncomfortable or unsure of what to do, please find a board member or one of the snack shack staff.
