

PIPER

Command Center BETA

Overview

The Piper Command Center is a build-it-yourself video game controller kit for kids ages 13+ that teaches them how to build their own game controller.

The Piper Command Center comes with everything you need for assembly and is powered by an Arduino micro which is compatible with Raspberry Pi just like the Piper Computer Kit. Once it's assembled, kids can use the game controller with their favorite desktop games on Windows, Mac, and Linux.

The kit teaches important STEM skills and allows kids to apply their understanding of electronic components into the realm of gaming and other real-life applications.
