Polarity change

From the factory jumpers come in RFP configuration but can easily be changed to CFP configuration in the following steps.

1. Mate
2. Unmate
3. Mate
4. Unmate
5. Mate
6. Mate
7. Mate
Comply with the following for safe installations:

A. Use caution when installing or modifying telecommunications circuits.
B. Never touch uninsulated wire terminals unless the circuit has been disconnected.
C. Never install this device in a wet location.
D. Never install wiring during a lightning storm.

Procedure for out of spec. SFP port removal

While Depressing the LC connector latches tilt slightly (arrow 1) to allow boot housing to move back into place.

After polarity has been changed through the field procedure one side will show a hole and the other side will show blank.

In the unlikely event the jumper will not withdraw from an SFP follow step “A” to remove the connector.
