The Siemon LightVerse system includes a wide range of plug and play transition modules which have been designed with the user in mind, combining innovative functionality with the quality and performance users expect from Siemon fiber solutions. This module may also be used as an aggregation/breakout module for network aggregation. Please see the Siemon Tech Brief on aggregation/breakout for more details.

Available in singlemode and multimode fiber options, Base-8 and Base-12 fiber configurations and various connector types, LightVerse modules allow users to seamlessly mix-and-match different types as needed to support their unique application needs.

**Shuttered Options**

LightVerse modules are available in both LC shuttered and non-shuttered configurations, allowing users to add more protection if required.

**True Fiber Support**

LightVerse modules are available at standard or ultra low loss performance levels and support OM3, OM4 and OS2 fiber types. Universal polarity* is also available for planning and installation simplicity.

**Flexible Installation**

Each LightVerse module includes an integrated latch and pull tether, which allows for easy one-handed installation and removal from the front or rear of the unit, allowing users to work efficiently in even the densest environments.

**Robust Construction**

All LightVerse modules are made from molded plastic, providing a lightweight yet durable footprint for use in your data networks.

**EASY MANAGEMENT**

Each LightVerse module includes an integrated pull tether which allows for easy installation and rear removal in tight, high density application environments, allowing users to quickly deliver move, adds and changes.

**SIMPLE TRANSITIONS**

The plug and play modules are ideal for transitioning MTP backbone cables to LC or SC simplex connectivity for Base-8 or Base-12 configurations, allowing maximum flexibility and control within your designs.
## Ordering Information

### LightVerse™ Plug and Play Modules

<table>
