Siemon launches new EagleEye Red software for the management of Datacenter and LAN networks

Watertown, CT - Siemon, a leading global network infrastructure specialist, is pleased to announce the release of an innovative upgrade to its EagleEye™ infrastructure management software. Siemon’s EagleEye Red™ Automated Infrastructure Management (AIM) software helps users better document and manage their IT network and devices.

Compliant with ISO/IEC 18598:2016 and TIA ANSI/TIA-5048 AIM standards, EagleEye Red is HTML5-based and offers a highly visual and intuitive experience which provides a range of graphical views for rack and floor layouts and infrastructure node hierarchies. Its multi-tiered network discovery protocols allow users to easily scan and find all IP-based devices within their network and position assets at their correct locations.

When used in combination with Siemon’s MapIT® G2 connectivity hardware, both physical layer and network device connections are updated automatically and provide an invaluable end-to-end circuit trace allowing users to easily monitor, manage and maintain their network infrastructure.

A real-time database provides an accurate picture of the IT infrastructure, which minimizes troubleshooting time and maximizes equipment and rack utilization. Network security is also enhanced via the detection and notification of unauthorized physical network or network device activity, and the inclusion of an AIM standard-compliant API provides a simple and robust way to share data with other software management tools.

Frank Velleca, Siemon market manager for strategic projects says, “Our new EagleEye Red software is ideally suited for customers with large and complex networks. The toolset provided by the software helps IT staff troubleshoot connectivity issues much faster and it improves the management of assets and remote smaller sites. The software also automatically updates when patching or when a network device status changes, providing a highly accurate source of network information that IT staff can rely on.”

About Siemon

Established in 1903, Siemon is an industry leader specialising in the design and manufacture of high-quality, high-performance IT infrastructure solutions and services for data centres, LANs and intelligent buildings. Headquartered in Connecticut, USA, with global sales, technical and logistics expertise spanning 150 countries, Siemon offers the most comprehensive suites of copper and optical fibre cabling systems, racks, cable management, and Intelligent Infrastructure Management solutions. With more than 400 patents specific to structured cabling, Siemon Labs invests heavily in R&D and the development of Industry Standards, underlining the company’s long-standing commitment to its customers and the industry. Through an ongoing commitment to waste and energy reduction, Siemon’s environmental sustainability benchmarks are unparalleled in the industry, including 179% global carbon negativity and zero-landfill status.

Siemon Interconnect Solutions (SIS) is a Siemon business unit comprised of a team of dedicated technical sales professionals supported by Siemon Labs, mechanical, electrical, and signal integrity engineers committed to solving industry and customer driven interconnect challenges. We provide custom network infrastructure solutions to OEMs, Leading Manufacturers, Value Added Resellers and System Integrators.
