

FIRETEC

Life Safety Solutions

Complete Messaging System Integration

Letter from the President...

Established in 1986, FIRETEC has been servicing the health care industry with advanced emergency call systems for over 25 years. When Firetec was started we specialized in “Fire Alarms” and Life Safety systems, shortly thereafter we recognized a need in healthcare for advanced life safety systems and we installed some of the very first Wandering Patient Systems in hospitals and nursing homes.

We noticed many independent living care residents were very mobile but only had stationary pull-cords by their bedside. In 1989, ten years ahead of its competitors, Firetec developed and implemented a computerized wireless call system. Later in 1998, a requirement came from the health care industry for escalated calls and caregiver-only resets. In 2000 Firetec introduced the world’s first resettable pendant. We are constantly innovating to fit the needs of caregivers today!

I like to take the time to visit with the residents and staff in facilities to see first-hand how our seniors adapt to technology and how they feel about security devices implemented in these care homes. I realized that someday I may be living in one of these homes and I felt there has to be a less restrictive solution for residents who had a full measure of independence. Through 6 months of diligent work, we developed the new “EZ-Key” program. This wireless key fob, which also has a help button on it, solves two main problems: (1) encourage residents to wear or have the help button on them and (2) offer a greater measure of freedom and independence.

Firetec now has the EZ Key concept at many facilities in Canada, the first in the World to introduce this technology in these unique applications. With EZ key there are no worries. Residents will have trouble free, easy access and security all in one system! That is why we call it the “EZ Caregiver” solution!

Thanks again for your continued support,

Vernon G. Houle, President
FIRETEC Life Safety Solutions

- Front Door Intercom
- Staff to Overhead Paging
- Resident to Staff—Panic
- Integration to any Business Phone System

Simple - easy to use
as a regular phone !!

Revenue Generation Possibilities

- Resident Phone Service
- Resident Internet Service

Imagine aging... *transformed*

Isn't it time for hospitals and care facilities to feel more like home than an institution?

Introducing EZ Caregiver

Envision a technology that quickly and easily allows residents the ability to go places without being supervised or restricted, yet still offers safety, security, and the ability to call for help, just minutes away if needed. A way to let patients with Alzheimer's or dementia go outside to the courtyard by themselves, but only if it's warm enough that they won't need their jacket.

Imagine each resident or staff member wearing a watch or pendant that automatically opens doors as they approach. What if being in a wheelchair meant hands-free door opening ... no more struggle to open doors for yourself.

This is just the beginning of what our EZ Caregiver solution can do. Aging no longer has to mean feeling helpless, or losing dignity and independence.

Innovative. Visionary. Truly making a difference in the lives of others.

EZ CAREGIVER
Life Safety Solutions

New Innovative Applications!

...part of every system with no hidden cost.

Let's take a look at this common nursing home scenario. Mrs. Miller, an elderly resident, stumbles and falls on route to the washroom. She pushes the help button on her EZ Key pendant. A text message goes immediately to her nurse, Sue. Sue calls Mrs. Miller on her room phone, the EZ Dial, sitting beside the bed. Mrs. Miller can't get to the phone, but it will be okay.

The speaker phone answers automatically. With a very sensitive microphone, the nurse hears Mrs. Miller crying for help and rushes to the room. If Mrs. Miller is in a different room, that's no problem. Her

location is automatically reported with the distress call. As an added feature, residents can use the phone to check the daily menu or activities list with one button touch.

The best feature of EZ Dial is its ability to pay for and fund itself. By directly supplying resident telephone lines, FIRETEC creates a self-sustaining revenue generator for the care facility, with added monthly positive cash flow from long distance and monthly phone line rental.

All our products are powered by EZ Link™, which logs each help call, automatically performs cash call billings for resident phones, generates time and attendance logs, sends out messages and alerts, and runs EZ Caregiver technology.

EZ Caregiver Product Line

EZ Key™

Wireless resident key and door access control with built-in help button.

EZ Keep™

Secure, non removable bracelet with resident key for dementia and Alzheimer's patients.

EZ Dial™

Big button, easy to use residential telephone. Allows for two-way voice between caregiver and resident.

EZ Pass™

Staff tag with two programmable buttons including a distress button and hands-free door access.

EZ Find™

Asset management tag used to monitor any type of asset or equipment for locating and security reasons.

EZ Caregiver Product Line

EZ Call™

Phone solutions using NEC wireless devices and hardware business sets, a powerful communications system that links the resident to the responder. Integrates advanced voice, personal alarm, and message communications in a choice of wireless devices.

NEC IP DECT I755 Handset
NEC DECT G955 Handset
NEC Messenger M155

EZ Link™

All our products are powered by EZ Link™, a suite of software which logs each help call, automatically tracks usage and generates resident phone bills, generates time and attendance logs for staff, sends out messages and alerts to responders, and runs EZ Caregiver™ technology.

EZ Help™

Wireless help pull cord for resident living quarters, tub rooms, common areas, and washrooms.

EZ APPS

EZ Caregiver Product Applications

EZ CASH

Revenue generation for your facility through call accounting. Hotels make money by providing phone service to their clients. Why not your facility? With the addition of some hardware to your phone system and the EZ Cash software to handle all the details and billing, it becomes effortless to generate extra revenue for your site. Could you use some EZ Cash? Ask me how.

EZ TIME

Is staff time punch cards a concern? With the EZ Time application full staff reporting is possible, all within the STAFF BADGE arriving onsite. EZ Time will auto generate reports that can be automatically emailed out to management daily, weekly, or monthly. This becomes a cost effective and EZ method for management to be up to date on employee attendance. EZ Time can also monitor all phone calls, time and length of call made by each extension.

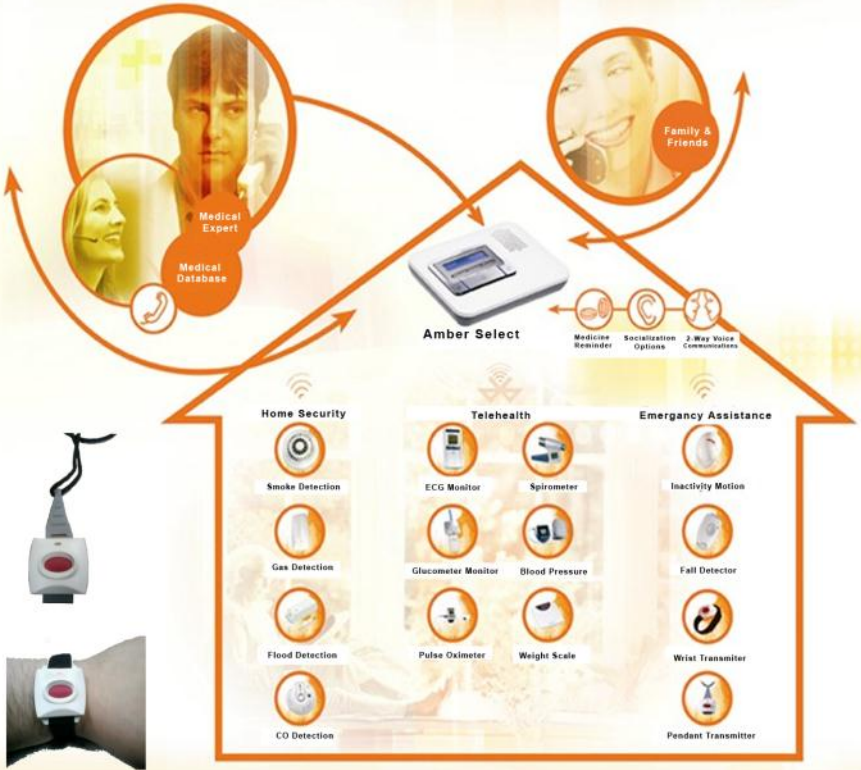

EZ TOUR

Staff rounds are always required, especially at night. Keeping track of when these occur is essential for the wellbeing of residents. With EZ Tour you can be sure that the rounds are being completed in a timely fashion. It also allows a facility to monitor staff requirements. If a round is not completed within a specified time frame, alerts can be forwarded to the staff as a reminder as well to management. Help ensure that your residents are well monitored. Peace of mind knowing that residents have been checked can be EZ with EZ Tour.

Homecare Solutions

and to meet the needs of seniors and those who care for them.

Features

- Communicates to central station & private numbers
- 2-way voice and speakerphone communication
- Up to 29 user or system transmitters
- Visual and audible announcements
- Medicine and daily task reminders

SpiderAlert

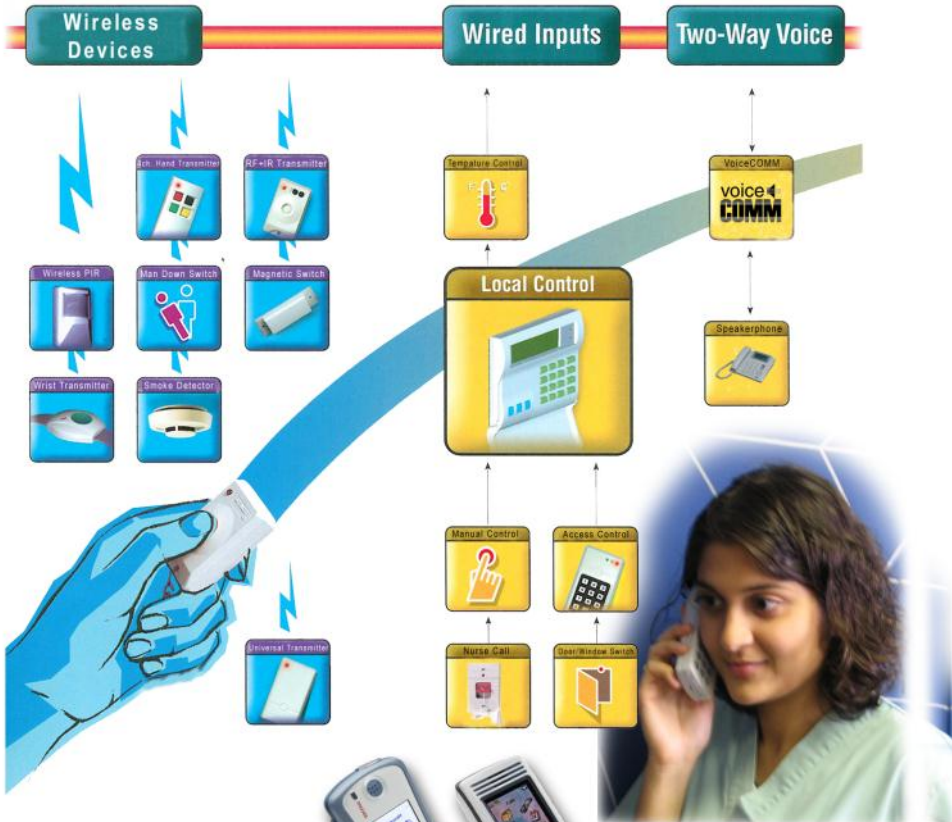

Signaling Network

Integrates

- wander prevention
- door & access controls
- staff alerts
- resident alerts
- wireless telephones
- alpha numeric pagers
- two-way voice systems

Emergency Help System

Features

- unlimited range
- supervised devices
- email notification of alarm and trouble
- call escalation with delayed response notification
- remote system management
- scalable from 1 to over 65,000 devices

Universal Wireless Transmitter MCT-100 Features

- Two inputs with individual ID code on each input. One input is used for the Emergency Call Alert, the other for a reset of that alert clearing the escalation sequence on the central server and logging in time and attendance to the call.
- Universal ¼" Jack on side accepting most nursecall signaling devices.
- Superior transmission range
- Fully supervised.
- PowerCode™ ID factory-selected from 16 million combinations.
- PowerCode™ version does not support reset feature.
- Smart anti-collision mechanism supports multiple simultaneous transmissions.
- Long-life standard lithium battery included with approx. 5-year life span and low-battery signaling.
- Compliance with international standards.

Emergency Call Systems

Universal Wireless Transmitter MCT-100J Accessories

7700 Series Repairable Momentary Call Cords

The 7700 style is the most economical momentary call cord and features are repairable, push button pendant. The 7700 is available as a single or double style with a ¼" 2-conductor phone plug or a variety of plug styles that are compatible with most major nurse call systems. The 7700 call cord is certified oxygen safe and is available in a wide variety of lengths and three color options (white, grey and beige). It has a 1-year warranty and comes with a free security clip.

Geriatric Call Cord

The Geriatric Call Cord is a round, flattened momentary call cord pad that works great for residents who have limited hand dexterity. This call cord utilizes a mechanical switch in the pad that can be activated by slight pressure from the hand, arm or body, or can even be positioned under the user's chin.

- Includes security clip
- Large pad for easy activation
- Safe for use in oxygenated environments
- 2-year warranty

Bed Monitoring

This Fall Monitor functions with bed monitor pressure pads, chair monitor pressure pads, floor mat monitors, or seatbelt monitors with an audible and visual alert. This fall alarm features a Safety Auto-Reset™, no On/Off Switch - "always on technology", a Nurse Call input plug, full-range adjustable volume, three different monitor tones, and a programmable 0-2 second delay. It has an optional magnetic key which can allow only the caregiver to silence the alarming fall monitor. Includes a One Year Warranty.

Business Phone Solutions

NEC

- Digital, analog, and VOIP systems available
- Ideal for any office environment
- Wide variety of features and options
- Multiple desktop phones available
- Ability to link multiple sites into one phone system

**“5 Year Parts”
Best Warranty in the Industry**

NEC AP300

NEC's new AP300 series takes IP DECT into the next decade

- * Very small and attractive design
- * AP300 connects directly to the LAN
- * Highly scalable up to 750 APs and thousands of handsets
- * Compatible with AP200 to be combined in existing networks
- * Open SIP interface compatible with a variety of PBX platforms
- * Rich application support such as Directory and Presence
- * Open DMLS interface for messaging systems
- * Wall as well as ceiling mountable

ASCOM d81 – PERFORMS WHERE OTHER HANDSETS REACH THEIR LIMITS

'Pick one up and you'll know this is no ordinary handset. From its tough, super-protective outer shell to its outstanding levels of functionality and operating safety, the Ascom d81 is the high quality handset demanding users in the most challenging of working environments turn to for operational excellence'.

A high quality expression of tough functionality

Many working environments demand high levels of product endurance and facilitating technology. In these situations, maintaining these standards is a daily challenge and as a result, the need for reliable, robust equipment is a priority. Now there's a top of the line handset that covers every eventuality – the d81 from Ascom.

Designed to be challenged

The Ascom d81 and its tough characteristics are at home in demanding working environments. One of main reasons behind this is the handset's tough rubber casing on exposed angles and edges – we say tough in so much as it was dropped from heights of up to 2 metres during testing without failing. Testing also included electro-magnetic compatibility (EMC) testing, during which double the voltage required to obtain these safety certificates was applied. The handset, as well as its built in headset connector and charging and programming connector has IP65 classification, a testament to its ability to resist permeation by dust and water. It also has an extended operating temperature from -10 C to +55 C.

Operationally and commercially superior

The d81 combines high reliability, quality construction and a proven IP-DECT operating platform with high volume and voice quality. It is these outstanding performance and safety features that set the d81 apart from its competitors, allowing users to deliver the quicker response their business or other activities depend on.

TELECOM

Swissphone DE900

The digital "POWER-Pager" for daily use

The most important performance features at a glance:

- 4+ months of standby time in ECO mode
- 3-line backlit LC-Display with large character set
- simple 3-button operation
- tone and vibration alarm
- IP 52 protection class

The DE900 was specially developed to meet our clients' needs. Thanks to the high-contrast display, enormous standby time, its ideal size and sturdy construction, the DE900 is the optimal alarming device for any safety organization.

Easy-to-use 3-button operation combined with intuitive menu navigation ensures safe and effective operation, which is especially important in alarm situations. Alarms can be signaled by audible tone or vibration alarm - your option. Priority alarm calls are always signaled by audible tone regardless of the user setting.

The newly developed ECO mode enables trouble-free operating periods in excess of 4 months. In idle state, the pager is set in a sleep mode and the display is switched off. Of course, the receiver remains active and ready to receive alarm signals. During ECO mode, reception sensitivity is enhanced and this useful feature further increases the contactability of the user.
