

Product Information

Product ID K0032

CAS No. 81760-45-4

Chemical Name

Synonym

Formula $C_{36}H_{56}O_4$

Formula Wt. 552.42

Melting Point $32^{\circ}C$

Purity $\geq 97\%$

Solubility

Store Temp $-20^{\circ}C$

Ship Temp Blue Ice

Description Kahweol is a diterpene found in coffee beans that exhibits neuromodulatory, anti-osteoporotic, anti-resorptive, anti-inflammatory, antioxidative, anti-angiogenic, anticancer, and chemopreventive activities. Like other coffee compounds, kahweol may also display hyperlipidemic properties. In vitro, kahweol inhibits RANKL-induced osteoclast generation and bone resorbing activity. In other cellular and animal models, kahweol inhibits cell proliferation, migration, invasion, and tube formation, and suppresses expression of MCP-1 and COX-2. Additionally, kahweol activates Nrf2. In oral squamous cell carcinoma cells, this compound induces G1 phase cell cycle arrest and apoptosis and downregulates expression of Sp1. In vitro, kahweol inhibits aflatoxin B1-induced DNA adduct formation and increases levels of glutathione-S-transferase. This compound also inhibits H2O2-induced DNA damage and oxidative stress and decreases superoxide anion formation in vitro.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
K0032	10 mg	\$246.40
K0032	25 mg	\$420.60
K0032	100 mg	\$937.30
K0032	500 mg	\$3184.50
