

Product Information

Product ID I7357

CAS No. 480-19-3

Chemical Name 3,5,7-Trihydroxy-2-(4-hydroxy-3-methoxyphenyl)-4-benzopyrone

Synonym 3-Methylquercetin, Quercetin- 3'-methyl ether

Formula C₁₆H₁₂O₇

Formula Wt. 316.26

Melting Point 305°C (dec.)

Purity ≥98%

Solubility Soluble in acetone, methanol, ethylacetate, DMSO or water.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
I7357	1 mg	\$92.00
I7357	5 mg	\$204.30
I7357	25 mg	\$612.70

Store Temp 4°C

Ship Temp Ambient

Description Isorhamnetin is a flavonol found in *Tagetes* that exhibits anti-obesity, anti-inflammatory, antioxidative, anticancer chemotherapeutic, and chemopreventive activities. Isorhamnetin decreases levels of PPAR γ , CEBP α , LXR α , and lipoprotein lipase in adipocytes. In animal models of edema, isorhamnetin decreases expression of COX-2 and production of ROS and increases expression of Nrf2 and heme oxygenase 1 (HO-1). In colon cancer cells, isorhamnetin inhibits cell proliferation, induces G2/M phase cell cycle arrest, increases expression of cyclin B1, and inhibits signaling of the PI3K/Akt/mTOR pathway. Additionally, this compound decreases tumor development induced by DSS and azoxymethane in vivo by inhibiting activity of Src and β -catenin.
