Product Information

Product ID A4931
CAS No. 3544-24-9
Chemical Name 3-aminobenzamide

Synonym 3-AB, 3-ABA, INO-1001

Formula C₇H₈N₂O
Formula Wt. 136.15
Melting Point 115-116°C
Purity ≥97%
Solubility Soluble in DMSO or ethanol.

Pricing and Availability

Bulk quantities available upon request

| Product ID | Size | List Price |
|------------|--------|------------|
| A4931 | 100 mg | \$60.50 |
| A4931 | 250 mg | \$129.80 |
| A4931 | 500 mg | \$173.10 |

Store Temp 4°C
Ship Temp Ambient

Description 3-Aminobenzamide is an inhibitor of poly(ADP)-ribosyl polymerase (PARP) that exhibits cytoprotective, anti-atherosclerotic, and anticancer activities. 3-Aminobenzamide prevents UV-induced cell death in vitro and inhibits TGF-β1-induced phosphorylation of Smad3 in other cellular models. In vivo, this compound inhibits production of inflammatory cytokines, suppresses PARP activation, and decreases atherosclerotic lesion size. Additionally, 3-aminobenzamide induces G1 phase cell cycle arrest, downregulates expression of cyclin D1, β-catenin, c-Jun, c-Myc, and Id2, upregulates expression of p21 and genes involved in differentiation, and induces differentiation in osteosarcoma cells.
