Product Information

Product ID C5782
CAS No. 91-64-5
Chemical Name 2H-1-Benzopyran-2-one

Synonym Coumarin, Coumarinic anhydride, Tonka bean camphor

Formula C₉H₆O₂
Formula Wt. 146.14
Melting Point 68-70°C
Purity ≥98%
Solubility Slightly soluble in water. Soluble in alcohol, chloroform, ether, alkali hydroxide solutions or oils.

Store Temp Ambient

Ship Temp Ambient

Description Coumarin is a benzopyrone found in many plants such as the Tonka bean and sweet woodruff. Coumarin is commonly used in perfumes and fabric conditioners for its sweet odor. Coumarin is a precursor in the synthesis of anticoagulants such as warfarin; coumarin inhibits vitamin K. Coumarin is clinically used to treat edema, as it stimulates macrophages to degrade extracellular albumen, allowing increased fluid reabsorption. Coumarin is also used in dyes and bio-imaging. Derivatives of coumarin exhibit immunomodulatory, anticancer, and antimicrobial activities.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
C5782	10 g	\$38.30
C5782	50 g	\$63.70
