Description Erdosteine is a thiol derivative that is clinically used to treat bronchitis and chronic obstructive lung diseases; it exhibits mucolytic, antioxidative, and anti-inflammatory activities. In vitro, erdosteine inhibits H₂O₂-induced oxidative stress and DNA damage in vitro by scavenging ROS. Additionally, this compound decreases levels of leukotriene B₄ (LTB₄) and leukotriene E₄ (LTE₄) in clinical subjects with chronic obstructive pulmonary disease (COPD).
