Product Information

Product ID F4780
CAS No. 59333-67-4
Chemical Name N-Methyl-γ-[4-(trifluoromethyl)phenoxy]benzene-propanamine hydrochloride
Synonym Adofen, Fluoxeren, Lovan, Prozac, Sarafem

Formula C₁₇H₁₈F₃NO • HCl
Formula Wt. 345.79
Melting Point 158.4-158.9 °C
Purity ≥98%
Solubility Soluble in methanol, ethanol, acetone, acetonitrile and chloroform. Water to 10 mM, DMSO to 100 mM. DMF to 16 mg/ml. Ethanol to 60mg/ml

Store Temp Ambient
Ship Temp Ambient

Description Fluoxetine is an SSRI most often used to treat mood or psychiatric disorders such as depression, obsessive compulsive disorder, bulimia nervosa, panic disorder, and PTSD. Fluoxetine inhibits 5-HT reuptake acting as an antagonist at 5-HT transporters (SERTs) as well as at 5-HT receptors and σ₁ receptors. Likely related to its antidepressant activities, fluoxetine can prevent cue- and stress-induced reinstatement in animal models of substance abuse. In a clinical setting, fluoxetine increased abstinence rates in former female heroin-dependent subjects when combined with naltrexone compared to naltrexone alone. Additionally, this compound exhibits antiviral activity, demonstrated by its ability to reduce synthesis of coxsackievirus RNA and protein. Fluoxetine also acts as a functional inhibitor of acid sphingomyelinase (FIASMA).

pH value: 5-7 (5% aqueous solution)
