

Product Information

Product ID F5770

CAS No. 485-72-3

Chemical Name 7-Hydroxy-3-(4-methoxyphenyl)-4H-1-benzopyran-4-one

Synonym Biochanin B, Formononetol, Neochanin

Formula C₁₆H₁₂O₄

Formula Wt. 268.26

Melting Point 258° C

Purity ≥90%

Solubility Soluble in DMSO (200mg/mL) or methanol (2mg/mL).

Pricing and Availability

Bulk quantities available upon request

| Product ID | Size | List Price |
|------------|--------|------------|
| F5770 | 100 mg | \$102.00 |
| F5770 | 500 mg | \$306.20 |
| F5770 | 1 g | \$510.50 |

Description Formononetin is a phytoestrogen and isoflavone originally found in legumes in the *Fabaceae* family. Formononetin exhibits anti-inflammatory, antioxidative, anticancer, antihypertensive, anti-parasitic, anti-osteoporotic, and pro-angiogenic activities. Formononetin decreases expression of COX-2, malondialdehyde, TNF- α , and IL-6 and increases activity of superoxide dismutase and glutathione peroxidase in animal models of traumatic brain injury. In prostate cancer cells, formononetin increases expression of Bax and suppresses expression of IGF-1R, inducing apoptosis and inhibiting proliferation. In spontaneously hypertensive rats, formononetin decreases systolic blood pressure, increases expression of eNOS, and decreases expression of 5-HT receptors and α 1-adrenergic receptors. Additionally, formononetin inhibits attachment and motility of *Giardia*. This compound also induces mesenchymal stem cell differentiation, increases expression of VEGF and VEGFR2, and promotes bone fracture healing.
